Export Price Indexes—Selected Commodities: 1990 to 2001

Indexes are weighted by 1980 export values according to the Schedule B classification system of the U.S. Census Bureau. These indexes were collected from a sample of U.S. manufacturers of exports and are factory transaction prices. (F.a.s. = free alongside ship, N.e.s. = not elsewhere specified, F.o.b. = free on board)

Section 15

Business Enterprise

ates to the place and business firm and to business in the American economy. Information on the number, type, and size; financial data of multinational U.S. corporations; investments, expenditures; and sales and invento-

sources of these data are *Current Business*, published by the Bureau of Economic Analysis (BEA), *Monthly Labor Review Bulletin*, issued by the Bureau of Labor Statistics of the Federal Reserve System, *Annual Statistical Abstract*, the Internal Revenue Service, *Census Bureau's Economic Census*, *County Business Patterns*, *Financial Report for Manufacturing, and Trade Corporations*

S—A firm is generally a business organization under state or federal law and may include one or more establishments. The terms company, and enterprise are used interchangeably throughout this section. A firm doing business in more than one state is classified by industry and by the major activity of the firm.

The structure of a business firm relates to the legal entity used for tax purposes. A sole proprietorship is a single person owned business. A partnership may include large enterprises, many employees and hired part-time operators. A partnership is a business owned by two or more persons, each of whom has a financial interest in the business. A corporation is a business that is organized under state laws. Corporations file consolidated tax returns. In dual corporations, some

of which are affiliated through common ownership or control with other corporations filing separate returns.

Economic census—The economic census is the major source of facts about the structure and functioning of the nation's economy. It provides essential information for government, business, industry, and the general public. It furnishes an important part of the framework for such composite measures as the gross domestic product estimates, input/output measures, production and price indexes, and other statistical series that measure short-term changes in economic conditions. The Census Bureau takes the economic census every 5 years, covering years ending in "2" and "7." The economic census forms an integrated program at 5-year intervals since 1967, and before that for 1963, 1958, and 1954. Prior to that time, the individual censuses were taken separately at varying intervals.

The economic census is collected on an establishment basis. A company operating at more than one location is required to file a separate report for each store, factory, shop, or other location. Each establishment is assigned a separate industry classification based on its primary activity and not that of its parent company. Establishments responding to the establishment survey are classified into industries on the basis of their principal product or activity (determined by annual sales volume) in accordance with the *North American Industry Classification System—United States, 1997 manual* (see below).

More detailed information about the scope, coverage, classification system, data items, and publications for each of the economic censuses and related surveys is published in the *Guide to the Economic Censuses and Related Statistics*. More information on the methodology, procedures, and history of the censuses is

available in the *History of the 1997 Economic Census* found on the Census Bureau Web site at <<http://www.census.gov/prod/ec97/pol00-hec.pdf>>.

Data from the 1997 Economic Census were released through the Census Bureau's American FactFinder service, on CD-ROM, and in Adobe Acrobat PDF reports available on the Census Bureau Web site. For more information on these various media of release, see the following page on the Census Bureau Web site <<http://www.census.gov/epcd/www/econ97.html>>.

North American Industry Classification System (NAICS)—The 1997 Economic Census is the first census to present data based on the new NAICS. Previous census data were based on the Standard Industrial Classification (SIC) system. This new system of industrial classification was developed by experts on classification in government and private industry under the guidance of the

Office of Information and Regulatory Affairs, Office of Management and Budget.

There are 20 NAICS sectors, which are subdivided into 96 subsectors (three-digit codes), 313 industry groups (four-digit codes), and, as implemented in the United States, 1,170 industries (five- and six-digit codes). While many of the individual NAICS industries correspond directly to industries as defined under the SIC system, most of the higher level groupings do not.

Most of the 1997 Economic Census data are issued on a NAICS basis as seen in the industry and geographic series from the census. Other related census reports remain on an SIC basis due to use of administrative records and other methodological and data processing issues. Current survey data from the Census Bureau as well as other statistical agencies are converting over time to NAICS after benchmarking to the 1997 Economic Census where appropriate or implementation of data collection on a NAICS basis.

Number of Returns, Receipts, and Net Income by Type of Business: 1980 to 1999

8,932,000. Covers active enterprises only. Figures are estimates based on sample of unaudited tax returns; see note 1. Sign (-) indicates net loss.

No. 715. Major Industries—Employer Firms, Employment, and Annual Payroll by Enterprise Size: 1999

[5,608 represents 5,608,000. A firm is an aggregation of all establishments owned by a parent company (within a geographic location and/or industry) with some annual payroll. A firm may be a single location or it can include multiple locations. Employment is measured in March and payroll is annual leading to some firms with zero employment. Numbers in parentheses represent North American Industry Classification System codes, see text, this section]

Employer Firms, Establishments, Employment, and Annual Payroll by Enterprise Size: 1990 to 1999

except as noted (5,074 represents 5,074,000). Firms are an aggregation of all establishments owned by a partnership or sole proprietorship with active payroll in any quarter. Employment is measured in March and payroll is annual. This table illustrates the changing importance of enterprise sizes over time, not necessarily the number of firms or establishments.

	All industries—employment size of enterprise

1. Data are measured in March, thus some firms (start-ups after March, closures before March, and seasonal firms) will not be included in the March payroll and some annual payroll.

Firm Births and Deaths by Employment Size of Enterprise: 1990 to 1999

(3,105 represents 3,105,006). Data represent activity from March of the beginning year to March of the ending year with no employment in the first quarter of the beginning year were excluded. This table provides the number of initial establishments (based on plant number) as an approximation of firm births and deaths.

	Births (initial locations)				Deaths (initial locations)

No. 726. Mergers and Acquisitions—Summary: 1990 to 2001

[205.6 represents \$205,600,000,000. Covers transactions valued at \$5 million or more. Values based on transactions for which price data revealed. All activity includes mergers, acquisitions, acquisitions of partial interest that involve a 40 percent stake in the target or an investment of at least \$100 million, divestitures, and leveraged transactions that result in a change in ownership. Divestiture: sale of a business, division, or subsidiary by corporate owner to another party. Leveraged buyout: acquisition of a business in which buyers use mostly borrowed money to finance purchase price and incorporate debt into capital structure of business after change in ownership]

Z Less than 50. ¹ Includes patents to foreign governments. ² Includes patents for inventions, designs, botanical plants, and reissues. ³ Includes Defensive Publications, a practice which began in November 1968 and ended in July 1996; and Statutory Invention Registrations, the current practice, which began May 1985. These documents are patent applications, which are published to provide the defensive properties of a patent, but do not have the enforceable rights of a patent.

No. 731. Patents by Industry: 1980 to 2000

[Based on the 1972 Standard Industrial Classification (SIC). Includes all patents for inventions granted to residents of the United States, its territories, and foreign citizens. Individual industries may not add to total since a patent may be recorded in more than one industry category. Data for all years have been revised to reflect the U.S. Patent Classification System as of December 2000]

No. 737. Composite Indexes of Leading, Coincident, and Lagging Economic Indicators: 1990 to 2001

Item	Unit	1990	1995	1999	1999	2000	2001
Leading index, composite	1996=100	94.0	97.6	105.5	109.0	110.1	109.5
Average weekly hours, manufacturing	Hours	40.8	41.6	41.8	41.7	41.6	40.7
Average weekly initial claims for unemployment insurance	1,000	385.6	359.3	316.8	296.9	299.4	407.1
Manufacturers' new orders, consumer goods and materials (1996 dol.)	Mil. dol.	128,882	152,881	171,358	182,547	183,252	164,994
Vendor performance, slower deliveries diffusion index	Percent	47.9	52.8	51.1	53.2	53.3	48.0
Manufacturers' new orders, nondefense capital goods (1996 dol.)	Mil. dol.	36,515	40,986	52,519	55,175	63,633	53,031
Building permits, new private housing units	1,000	1,155	1,336	1,619	1,664	1,602	1,601
Stock prices, 500 common stocks	1941-43=10	334.6	541.6	1,084.3	1,326.1	1,426.8	1,192.1
Money supply, M2 (1996 dol.)	Bil. dol.	3,770	3,643	4,083	4,322	4,465	4,789
Interest rate spread, 10-year Treasury bonds less federal funds	Percent	0.45	0.74	-0.09	0.67	-0.21	1.13
Index of consumer expectations	1966:1=100	70.2	83.2	98.3	99.3	102.7	82.3
Coincident index, composite	1996=100	88.7	97.2	108.3	111.8	115.6	115.9
Employees on nonagricultural payrolls	1,000	109,404	117,188	125,845	128,901	131,757	132,228
Personal income less transfer payments (1996 dol.)	Bil. dol.	5,032	5,446	6,251	6,457	6,742	6,916
Industrial production	1992=100	98.9	114.4	134.5	139.4	145.7	140.4
Manufacturing and trade sales (1996 dol.)	Mil. dol.	593,865	699,548	774,192	819,707	855,776	849,485
Lagging index, composite	1996=100	101.8	98.8	102.3	104.1	107.0	105.6
Average duration of unemployment	Weeks	12.0	16.6	14.5	13.4	12.6	13.1
Inventories to sales ratio, manufacturing and trade (1996 dol.)	Ratio	1.47	1.41	1.40	1.38	1.38	1.39
Change in labor cost per unit of output, manufacturing	Percent	2.8	-2.4	-0.3	-0.5	2.5	6.3
Average prime rate	Percent	10.01	8.83	8.35	7.99	9.23	6.92
Commercial and industrial loans outstanding (1996 dol.)	Mil. dol.	606,695	562,542	686,323	756,187	847,501	750,830
Consumer installment credit to personal income ratio	Percent	16.1	16.6	17.3	17.6	17.9	18.5
Change in consumer price index for services	Percent	5.8	3.5	2.6	2.5	3.8	3.9

No. 738. Business Cycle Expansions and Contractions—Months of Duration: 1919 to 2001

[A trough is the low point of a business cycle; a peak is the high point. Contraction, or recession, is the period from peak to subsequent trough; expansion is the period from trough to subsequent peak. Business cycle reference dates are determined by the National Bureau of Economic Research, Inc.]

Business cycle reference date				Contraction (trough from previous peak)	Expansion (trough to peak)	Length of cycle	
Trough		Peak				Trough from previous trough	Peak from previous peak
Month	Year	Month	Year				
March	1919	January	1920	1 ⁷	10	2 ⁵¹	1 ¹⁷
July	1921	May	1923	18	22	28	40
July	1924	October	1926	14	27	36	41
November	1927	August	1929	13	21	40	34
March	1933	May	1937	43	50	64	93
June	1938	February	1945	13	80	63	93

No. 740. Index of Manufacturing Capacity: 1980 to 2001

[1992 output=100. Annual figures are averages of monthly data. Capacity represents estimated quantity of output relative to output in 1992 which the current stock of plant and equipment in manufacturing industries was capable of producing. Primary processing manufacturing includes textile mill products, paper and products, industrial chemicals, synthetic materials, and fertilizers; petroleum products, rubber and plastics products, lumber and products, primary metals, fabricated metals, stone, clay and glass products, semiconductors and related electronic components, and motor vehicle parts. Advanced processing manufacturing includes foods; tobacco products, apparel products, printing and publishing, chemical products and other agricultural chemicals; leather and products; furniture and fixtures, industrial machinery and equipment; electrical machinery except semiconductors and related electronic components; transportation equipment except motor vehicle parts; instruments; and miscellaneous manufactures]

Year	Relation of output to capacity (percent)				Year	Relation of output to capacity (percent)

No. 742. Manufacturing Corporations—Number, Assets, and Profits by Asset Size: 1990 to 2001

[Corporations and assets as of end of 4th quarter; profits for entire year (2,629,458 represents \$2,629,458,000,000). Through 2000 based on Standard Industrial Classification code; beginning 2001 based on North American Industry Classification System. For corporations above a certain asset value based on complete canvass. The asset value for complete canvass was raised in 1988 to \$50 million and in 1995 to \$250 million. Asset sizes less than these values are sampled, except as noted. For details regarding methodology, see source for first quarter, 1988. Minus sign (-) indicates loss]

¹ Beginning 1998, profits before and after income taxes reflect inclusion of minority stockholders' interest in net income before and after income taxes. ² Annual data are average debt for the year (using four end-of-quarter figures). ³ Data for 1992 (most significantly 1992:1 qtr.) reflect the early adoption of Financial Accounting Standards Board Statement 106 (Employer's Accounting for Post-Retirement Benefits Other Than Pensions) by a large number of companies during the fourth quarter of 1992. Data for 1993:1 qtr. also reflect adoption of Statement 106. Corporations must show the cumulative effect of a change in accounting principle in the first quarter of the year in which the change is adopted.

Section 16

Science and Technology

ns presents statistics on scien-
eering, and technological
with emphasis on patterns of
rd development (R&D) funding
entific, engineering, and techni-
nel; education; and employ-
included are statistics on
ram outlays and accomplish-
incipal sources of these data are
al Science Foundation (NSF) and
al Aeronautics and Space
tion (NASA).

s data chiefly through recur-
rs. Current NSF publications
data on funds for research and
nt and on scientific and engi-
rsonnel include detailed statis-
; issue briefs; and annual, bien-
ial, and special reports. Titles
s of coverage of these reports
: following: *Science and Engi-
icators; National Patterns of
rces; Women, Minorities, and
th Disabilities in Science and
g*—science and technology data
in chart and tabular form in a
ed publication—*Federal Funds
ch and Development; Federal
ng by Budget Function; Federal
Universities, Colleges, and
onprofit Institutions; Research
pment in Industry*; R&D expen-
l graduate enrollment and sup-
ed science and engineering;
teristics of doctoral scientists
ers and of recent graduates in
States. Statistical surveys in
s pose problems of concept and
and the data should therefore
d as broad estimates rather
ie, quantitative statements. See
r methodological and technical

ial Science Board's biennial
Engineering Indicators con-
and analysis of international
itic science and technology,
neasures of inputs and outputs.

The *Budget of the United States Govern-
ment*, published by the U.S. Office of Man-
agement and Budget, contains summary
financial data on federal R&D programs.

Research and development outlays—
NSF defines research as “systematic study
directed toward fuller scientific knowl-
edge of the subject studied” and develop-
ment as “the systematic use of scientific
knowledge directed toward the produc-
tion of useful materials, devices, systems,
or methods, including design and devel-
opment of prototypes and processes.”

National coverage of R&D expenditures is
developed primarily from periodic sur-
veys in four principal economic sectors:
(1) *Government*, made up primarily of fed-
eral executive agencies; (2) *industry*, con-
sisting of manufacturing and nonmanu-
facturing firms and the federally funded
research and development centers
(FFRDCs) they administer; (3) *universities
and colleges*, composed of universities,
colleges, and their affiliated institutions,
agricultural experiment stations, and
associated schools of agriculture and of
medicine, and FFRDCs administered by
educational institutions; and (4) *other
nonprofit institutions*, consisting of such
organizations as private philanthropic
foundations, nonprofit research institutes,
voluntary health agencies, and FFRDCs
administered by nonprofit organizations.

The R&D funds reported consist of current
operating costs, including planning and
administration costs, except as otherwise
noted. They exclude funds for routine
testing, mapping and surveying, collec-
tion of general-purpose data, dissemina-
tion of scientific information, and training
of scientific personnel.

**Scientists, engineers, and tech-
nicians**—Scientists and engineers are
defined as persons engaged in scientific
and engineering work at a level requiring
a knowledge of sciences equivalent at
least to that acquired through completion

of a 4-year college course. Technicians are defined as persons engaged in technical work at a level requiring knowledge acquired through a technical institute,

junior college, or other type of training less extensive than 4-year college training. Craftsmen and skilled workers are excluded.

No. 760. Federal R&D Obligations to Selected Universities and Colleges: 1981 to 2000

[In millions of dollars (4,410.9 represents \$4,410,900,000), except rank. For fiscal years ending in year shown; see text, Section 8, State and Local Government Finances and Employment. For the top 45 institutions receiving federal R&D funds in 1998. Awards to the administrative offices of university systems are excluded from totals for individual institutions because that allocation of funds is unknown, but those awards are included in "total all institutions"]

Section 17

Agriculture

ion presents statistics on farms
operators; land use; farm
expenditures, and debt; farm out-
luctivity, and marketings; foreign
agricultural products; specific
and livestock, poultry, and their

Principal sources are the reports
by the National Agricultural Statis-
tics Service (NASS) and the Economic
Research Service (ERS) of the U.S. Depart-
ment of Agriculture. The information from
the 1997 Census of Agriculture is avail-
able in printed form in the Volume 1, Geo-
graphic Area Series; in electronic format
on CD-ROM; and on the Internet site
www.nass.usda.gov/census/.
The Department of Agriculture publishes
Agricultural Statistics, a general
reference book on agricultural production,
consumption, facilities, costs,
and trends. The ERS publishes data on
assets, debt, and income on the
site [http://www.ers.usda.
gov/fing/farmincome/](http://www.ers.usda.gov/fing/farmincome/). Sources of
data on agricultural exports and
imports include *Foreign Agricultural
Statistics of the United States*, published by
the Department of Agriculture, and the reports of the U.S. Cen-
sus Bureau, particularly *U.S. Imports of
Agricultural Products on CD-ROM*, and *U.S. Exports
of Agricultural Products on CD-ROM*.

Field offices of the NASS collect
data on crops, livestock and products,
market prices, farm employment, and
other related subjects mainly through
surveys. Information is obtained
on 75 crops and 50 livestock items
and scores of items pertaining to
agricultural production and marketing.
Estimates and supporting informa-
tion are sent to the Agricultural Statistics
Service (NASS) which reviews the esti-
mated issues reports containing state
and national data. Among these reports
are annual summaries such as *Crop Pro-
duction Values, Agricultural Prices,
Livestock Production, Disposition and*

Income. For more information about con-
cepts and methods underlying USDA's sta-
tistical series, see *Major Statistical Series
of the U.S. Department of Agriculture*
(Agricultural Handbook No. 671), a
12-volume set of publications.

Farms and farmland—The definitions of
a farm have varied through time. Since
1850, when minimum criteria defining a
farm for census purposes first were estab-
lished, the farm definition has changed
nine times. The current definition, first
used for the 1974 census, is any place
from which \$1,000 or more of agricultural
products were produced and sold, or nor-
mally would have been sold, during the
census year.

Acreage designated as "land in farms"
consists primarily of agricultural land
used for crops, pasture, or grazing. It also
includes woodland and wasteland not
actually under cultivation or used for pas-
ture or grazing, provided it was part of
the farm operator's total operation. Land
in farms includes acres set aside under
annual commodity acreage programs as
well as acres in the Conservation Reserve
and Wetlands Reserve Programs for places
meeting the farm definition. Land in
farms is an operating unit concept and
includes land owned and operated as well
as land rented from others. All grazing
land, except land used under government
permits on a per-head basis, was included
as "land in farms" provided it was part of
a farm or ranch.

Since 1945, an evaluation of census cov-
erage has been conducted for each cen-
sus of agriculture to provide estimates of
the completeness of census farm counts.
According to coverage evaluation results,
the past five censuses of agriculture
included an average of 92 percent of U.S.
farms and 98 percent of agriculture pro-
duction. The 1997 coverage evaluation
program was designed to measure four
components of error in the census farm

counts. These components include undercount due to farms not on the mail list; overcount due to farms duplicated or enumerated more than once; undercount due to farms incorrectly classified as non-farms; and overcount due to nonfarms incorrectly classified as farms. The first component, mail list undercount, is by far the largest component of coverage error. The percentage of farms missed in the census varies considerably by state. In general, farms not on the mail list tended to be small in acreage, production, and sales of agricultural products. For more explanation about mail list compilation and census coverage, see Appendixes A and C, *1997 Census of Agriculture*, Volume 1, reports.

Farm income—The final agricultural sector output comprises cash receipts from farm marketings of crops and livestock, federal government payments made directly to farmers for farm-related activities, rental value of farm homes, value of farm products consumed in farm homes, and other farm-related income such as machine hire and custom work. Farm marketings represent quantities of agricultural products sold by farmers multiplied by prices received per unit of production at the local market. Information on prices received for farm products is generally obtained by the NASS Agricultural Statistics Board from surveys of firms (such as grain elevators, packers, and processors) purchasing agricultural commodities directly from producers. In some cases, the price information is obtained directly from the producers.

Crops—Estimates of crop acreage and production by the NASS are based on current sample survey data obtained from

individual producers and objective yield counts, reports of carlot shipments, market records, personal field observations by field statisticians, and reports from other sources. Prices received by farmers are marketing year averages. These averages are based on U.S. monthly prices weighted by monthly marketings during specific periods. U.S. monthly prices are state average prices weighted by marketings during the month. Marketing year average prices do not include allowances for outstanding loans, government purchases, deficiency payments or disaster payments.

All state prices are based on individual state marketing years, while U.S. marketing year averages are based on standard marketing years for each crop. For a listing of the crop marketing years and the participating states in the monthly program, see *Crop Values*. Value of production is computed by multiplying state prices by each state's production. The U.S. value of production is the sum of state values for all states. Value of production figures shown in Tables 813-816, 820, and 821 should not be confused with cash receipts from farm marketings which relate to sales during a calendar year, irrespective of the year of production.

Livestock—Annual inventory numbers of livestock and estimates of livestock, dairy, and poultry production prepared by the Department of Agriculture are based on information from farmers and ranchers obtained by probability survey sampling methods.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability pertaining to Department of Agriculture data, see Appendix III.

No. 793. Farm Income—Cash Receipts From Farm Marketings: 1995 to 2000

[In millions of dollars (188,049 represents \$188,049,000,000). Represents gross receipts from commercial market sales as well as net Commodity Credit Corporation loans. The source estimates and publishes individual cash receipt values only for major commodities and major producing states. The U.S. receipts for individual commodities, computed as the sum of the reported states, may understate the value of sales for some commodities. The degree of underestimation in some of the minor commodities can be substantial]

					Taxes	95	109	123	124
					Wage rates	96	114	140	148
					Parity ratio (1910-14=100) ³	51	45	38	40

NA Not available. ¹ Excludes potatoes and dry beans. ² Includes production items, interest, taxes, wage rates, and a family living component. The family living component is the Consumer Price Index for all urban consumers from the Bureau of Labor Statistics. See text, Section 14, Prices, and Table 681. ³ Ratio of prices received by farmers to prices paid. Source: U.S. Dept. of Agriculture, National Agricultural Statistics Service, *Agricultural Prices: Annual Summary*.

d. 799. Value of Selected Commodities Produced Under Contracts: 2000

1,394 represents \$66,394,000,000. Marketing contracts refer to verbal or written agreements between a buyer and a grower that set a price and determine an outlet for a specified quantity of a commodity before harvest or before the farmer markets the commodity. Production contracts involve paying the farmer a fee for providing management, labor, facilities, and equipment, while signing ownership of the product to the contractor. Survey based estimates (see source) exclude Alaska and Hawaii and do not represent official U.S. Dept. of Agriculture estimates of farm sector activity]

Commodity	Value of production under contract (mil. dol.)	Percent of total production	Commodity	Value of production under contract (mil. dol.)	Percent of total production
Total	66,394	237	Sugar beets	967	88
Marketing contracts ³	37,395	221	Vegetables	2,123	25
Cattle	41,680	4	Production contracts ³	28,999	218
Corn	1,944	13	Poultry and eggs ⁵	12,181	74
Cotton	1,438	43	Cattle	5,884	418
Fruits	7,837	70	Hogs	3,918	46
Hogs	41,109	413	Vegetables	4,107	413
Soybeans	1,152	9			

¹ Represents percent of production under contract as percent of total commodity production, except as noted. ² Percent of all value of agricultural production. ³ Includes other commodities not shown separately. ⁴ Data have relative standard error between 25 and 49 percent. ⁵ Data not available to estimate value of production for broilers. Source: U.S. Dept. of Agriculture, Economic Research Service, *Agricultural Resource Management Study*, annual.

d. 800. Civilian Consumer Expenditures for Farm Foods: 1980 to 2000

billions of dollars, except percent (264.4 represents \$264,400,000,000). Excludes imported and nonfarm foods, such as fee and seafood, as well as food consumed by the military, or exported]

No. 806. Imports' Share of Food Consumption by Commodity: 1980 to 2000

[In percent. Import share is the total quantity imported divided by the quantity available for domestic human food consumption. Calculated from supply and utilization balance sheets. A portion of the imports of some commodities is exported plus, some is imported to such nonfood uses as feed, seed, alcohol and fuel production, and industrial uses. These can overstate the importance of imports]

Commodity	1980	1985	1990	1995	1996	1997	1999	1999	2000
Beef	8.7	8.0	9.7	8.1	7.9	9.0	9.9	10.6	11.0

No. 811. Percent of Corn, Soybean, and Cotton Acreage Planted With Genetically Modified Seed: 2000 and 2002

[In percent. Based on the June Agricultural Survey. Randomly selected farmers across the United States were asked if they planted corn, soybeans, or upland cotton seed that, through biotechnology, is resistant to herbicides, insects, or both. The states published individually below represent 81 percent of all corn planted acres, 89 percent of all soybean planted acres, and 81 percent of all upland cotton planted acres. Conventionally bred herbicide resistant varieties were excluded. Insect resistant varieties include only those containing bacillus thuringiensis (Bt). The acreage estimates are subject to sampling variability because all operations planting biotech varieties are not included in the sample]

Section 18

Natural Resources

Section presents data on the area, production, trade, reserves, and disposition of natural resources. Forest resources is defined here as including forestry, fisheries, and mining and mineral products.

Forestry—Presents data on the area, production, and timber resource of commercial timberland; forestry statistics covering the National Forests and Forest cooperative programs; and production of lumber, pulpwood, woodpulp, and paperboard, and similar data.

Principal sources of data relating to fisheries and forest products are *Forest Resources of the United States, 1991*; *Forest Demand and Technology Assessment 2001*; *U.S. Timber Production, Consumption, and Price Statistics*; *Areas of the National Forest System*, published annually by the Forest Service; Department of Agriculture; *Agricultural Statistics* issued by the Department of Agriculture; and reports of the annual production of manufactures, see Table 851) and the annual *Current Industrial Statistics*, issued by the Census Bureau on the Internet and in print in the annual *Manufacturing Profiles*. Additional information is published in the monthly *Survey of Current Business* of the Bureau of Economic Analysis, and the annual *Wood Pulp Statistics* and *The Statistics of Paperboard, and Wood Pulp* of the Forest and Paper Association, Arlington, DC.

The completeness and reliability of statistics on forests and forest products vary considerably. The data for forest land area and volumes are much more reliable for areas which have been recently reforested than for those for which only timber stands are available. In general, more data are available for lumber and other manufactured products such as particle board and softwood panels, etc., than for primary forest products such as poles and fuelwood.

Fisheries—The principal source of data relating to fisheries is *Fisheries of the United States*, issued annually by the National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA). The NMFS collects and disseminates data on commercial landings of fish and shellfish. Annual reports include quantity and value of commercial landings of fish and shellfish disposition of landings and number and kinds of fishing vessels and fishing gear. Reports for the fish-processing industry include annual output for the wholesaling and fish processing establishments, annual and seasonal employment. The principal source for these data is the annual *Fisheries of the United States*.

Mining and mineral products—Presents data relating to mineral industries and their products, general summary measures of production and employment, and more detailed data on production, prices, imports and exports, consumption, and distribution for specific industries and products. Data on mining and mineral products may also be found in Sections 19, 21, and 28 of this *Abstract*; data on mining employment may be found in Section 12.

Mining comprises the extraction of minerals occurring naturally (coal, ores, crude petroleum, natural gas) and quarrying, well operation, milling, refining and processing, and other preparation customarily done at the mine or well site or as a part of extraction activity. (Mineral preparation plants are usually operated together with mines or quarries.) Exploration for minerals is included as is the development of mineral properties.

The principal governmental sources of these data are the *Minerals Yearbook* and *Mineral Commodity Summaries*, published by the U.S. Geological Survey, Department of the Interior, and various monthly and annual publications of the Energy Information Administration, Department of

Energy. See text, Section 19, for a list of Department of Energy publications. In addition, the Census Bureau conducts a census of mineral industries every 5 years (for 1997 results, see Tables 864 and 865).

Nongovernment sources include the *Annual Statistical Report of the American Iron and Steel Institute*, Washington, DC; *Metals Week* and the monthly *Engineering and Mining Journal*, issued by the McGraw-Hill Publishing Co., New York, NY; *The Iron Age*, issued weekly by the Chilton Co., Philadelphia, PA; and the *Joint Association Survey of the U.S. Oil and Gas Industry*, conducted jointly by the American Petroleum Institute, Independent Petroleum Association of America, and Mid-Continent Oil and Gas Association.

Mineral statistics, with principal emphasis on commodity detail, have been collected by the U.S. Geological Survey and the former Bureau of Mines since 1880. Current data in U.S. Geological Survey publications include quantity and value of non-fuel minerals produced, sold or used by producers, or shipped; quantity of minerals stocked; crude materials treated and prepared minerals recovered; and consumption of mineral raw materials.

Censuses of mineral industries have been conducted by the Census Bureau at various intervals since 1840. Beginning with the 1967 census, legislation provides for a census to be conducted every 5 years for years ending in "2" and "7." The most recent results, published for 1997, are based on the North American Industry Classification System (NAICS). The censuses provide, for the various types of mineral establishments, information on operating costs, capital expenditures, labor, equipment, and energy requirements in relation to their value of shipments and other receipts. Commodity statistics on many manufactured mineral products are also collected by the Census Bureau at monthly, quarterly, or annual intervals and issued in its *Current Industrial Reports* series.

In general, figures shown in the individual commodity tables include data for outlying areas and may therefore not agree with summary tables. Except for crude petroleum and refined products, the export and import figures include foreign trade passing through the customs districts of United States and Puerto Rico but exclude shipments between U.S. territories and the customs districts.

No. 832. Gross Domestic Product of Natural Resource-Related Industries in Current and Real (1996) Dollars by Industry: 1990 to 2000

[In billions of dollars (5,803.2 represents 5,803,200,000,000). Data are based on the 1987 SIC. Data include nonfactor charges (capital consumption allowances, indirect business taxes, etc.) as well as factor charges against gross product; corporate profits and capital consumption allowances have been shifted from a company to an establishment basis]

¹ Timberland is forest land that is producing or is capable of crops of industrial wood and not withdrawn from timber utilization by statute or administrative regulation. Areas qualifying as timberland have the capability of producing in excess of 20 cubic feet per acre per year of industrial wood in natural stands. Currently inaccessible and inoperable areas are included. ² Includes Indian lands. ³ Sawtimber is timber suitable for sawing into lumber. Live trees of commercial species containing at least one 12-foot sawlog or two noncontiguous 8-foot logs, and meeting regional specifications for freedom from defect. Softwood trees must be at least 9.0-inches diameter, and hardwood trees must be at least 11.0-inches diameter at 4 1/2 feet above ground. International 1/4-inch rule. ⁴ Live trees of commercial species meeting specified standards of quality or vigor. Cull trees are excluded. Includes only trees 5.0-inches diameter or larger at 4 1/2 feet above ground.

No. 855. Mineral Production: 1990 to 2001

[Data represent production as measured by mine shipments, mine sales or marketable production]

Mineral	Unit	1990	1995	1999	2000	2001, est.
FUEL MINERALS						
Coal, total	Mil. sh. tons	1,029.1	1,033.0	1,100.4	1,073.6	1,121.3
Bituminous	Mil. sh. tons	693.2	613.8	601.7	574.3	(NA)
Subbituminous	Mil. sh. tons	244.3	328.0	406.7	409.2	(NA)
Lignite	Mil. sh. tons	88.1	86.5	87.2	85.6	(NA)
Anthracite	Mil. sh. tons	3.5	4.7	4.8	4.6	(NA)
Natural gas (marketed production)	Tril. cu. ft.	18.59	19.51	19.80	20.00	20.47
Petroleum (crude)	Mil. bbl.	2,686	2,394	2,147	2,125	2,118
Uranium (recoverable content)	Mil. lb.	8.9	6.0	4.6	4.0	2.6
NONFUEL MINERALS						
Asbestos (sales)	1,000 metric tons	(D)	9	7	5	5
Barite, primary, sold/used by producers	1,000 metric tons	430	543	434	362	400
Boron minerals, sold or used by producers	1,000 metric tons	1,090	1,190	1,220	1,070	(NA)
Bromine, sold or used by producers	1,000 metric tons	177	218	239	228	204
Cement:						
Portland	Mil. metric tons	67	73	82	84	(NA)
Masonry	Mil. metric tons	3	4	4	4	(NA)
Clays	1,000 metric tons	42,900	43,100	42,200	40,800	40,800
Diatomite	1,000 metric tons	631	722	747	677	735
Feldspar	1,000 metric tons	630	680	675	790	780
Fluorspar, finished shipments	1,000 metric tons	64	51	-	-	-
Garnet (industrial)	1,000 metric tons	47	48	61	60	53
Gypsum, crude	Mil. metric tons	15	17	22	20	19
Helium	Mil. cu. meters	85	101	114	98	100
Lime, sold or used by producers	Mil. metric tons	16	19	20	20	19
Mica, scrap & flake, sold/used by producers	1,000 metric tons	109	108	104	101	95
Peat, sales by producers	1,000 metric tons	721	660	731	755	812
Perlite, processed, sold or used	1,000 metric tons	576	700	711	672	650
Phosphate rock (marketable)	Mil. metric tons	46	44	41	39	34
Potash (K ₂ O equivalent) sales	1,000 metric tons	1,710	1,480	1,200	1,300	1,200
Pumice & pumicite, producer sales	1,000 metric tons	443	529	643	697	687
Salt, common, sold/used by producers	Mil. metric tons	37	41	45	46	45
Sand & gravel, sold/used by producer	Mil. metric tons	855	935	1,139	1,148	1,149
Construction	Mil. metric tons	829	907	1,110	1,120	1,120
Industrial	Mil. metric tons	26	28	29	28	29
Sodium carbonate (natural) (soda ash)	1,000 metric tons	9,100	10,100	10,200	10,200	10,300
Sodium sulfate (natural)	1,000 metric tons	349	327	599	491	510
Stone	Mil. metric tons	1,110	2,420	2,800	2,810	2,820
Crushed and broken	Mil. metric tons	1,110	1,260	1,540	1,560	1,620
Dimension	1,000 metric tons	1,120	1,160	1,250	1,250	1,300
Sulfur: Total shipments	1,000 metric tons	11,500	12,100	11,100	10,300	9,200
Sulfur: Frasch mines (shipments)	1,000 metric tons	3,680	(D)	(D)	10,500	9,100
Talc, and pyrophyllite, crude	1,000 metric tons	1,270	1,060	925	851	914
Vermiculite concentrate	1,000 metric tons	209	171	175	150	150
METALS						
Antimony ore and concentrate	Metric tons	(D)	262	449	(D)	300
Aluminum	1,000 metric tons	4,048	3,375	3,779	3,668	2,600
Bauxite (dried)	1,000 metric tons	(D)	(D)	(NA)	(NA)	(NA)
Copper (recoverable content)	1,000 metric tons	1,590	1,850	1,600	1,440	1,340
Gold (recoverable content)	Metric tons	294	317	341	353	350
Iron ore (gross weight)	Mil. metric tons	57	61	58	63	60
Lead (recoverable content)	1,000 metric tons	484	394	520	468	420
Magnesium metal	1,000 metric tons	139	142	(D)	(D)	(D)
Manganiferous ore (gross weight)	1,000 metric ton	(D)	(D)	-	-	(NA)
Mercury	Metric tons	562	(D)	(NA)	(NA)	-
Molybdenum (concentrate)	1,000 metric tons	62	61	43	41	38
Nickel	1,000 metric tons	-	2	-	-	-
Palladium metal	Kilograms	5,930	5,260	9,800	10,300	12,000
Platinum metal	Kilograms	1,810	1,590	2,920	3,110	3,600
Silicon (silicon content)	1,000 metric tons	418	396	423	367	301
Silver (recoverable content)	Metric tons	2,120	1,560	1,950	1,660	1,800
Titanium concentrate: ilmenite (gross weight)	1,000 metric tons	(D)	(D)	(D)	(NA)	(NA)
Tungsten ore and concentrate	Metric tons	(D)	(D)	-	-	(NA)
Zinc (recoverable content)	1,000 metric tons	515	614	843	829	830

- Represents zero. D Withheld to avoid disclosing individual company data. NA Not available. ¹ 42 gal. bbl.
² Beginning 1995, includes apilite. ³ Refined. ⁴ Excludes abrasive stone, bituminous limestone and sandstone, and ground soapstone, all included elsewhere in table. ⁵ Includes calcareous marl and slate. ⁶ Includes Puerto Rico. ⁷ Represents shipments; includes byproduct ores. ⁸ 5 to 35 percent manganiferous ore. ⁹ Covers mercury recovered as a byproduct of gold ores only. ¹⁰ Content of ore and concentrate.

No. 865. Crude Oil, Natural Gas, and Natural Gas Liquids—Reserves by State: 1990 and 2000

[26,254 mil. bbl. represents 26,254,000,000 bbl. As of December 31. Proved reserves are estimated quantities of the mineral which geological and engineering data demonstrate with reasonable certainty, to be recoverable in future years from known reservoirs under existing economic and operating conditions. Indicated reserves of crude oil are quantities other than proved reserves, which may become economically recoverable from existing productive reservoirs through the application of improved recovery techniques using current technology. Based on a sample of operators of oil and gas wells]

171. Coal and Coke—Summary: 1980 to 2000

Short tons represents 830,000,000 short tons. Includes coal consumed at mines. Demonstrated coal reserve base for United States in Jan. 1, 1997, was an estimated 508 billion tons. Recoverability varies between 40 and 90 percent for individual deposit; 60 percent or more of overall U.S. coal reserve base is believed to be recoverable.

No. 873. Demonstrated Coal Reserves by Type of Coal and Major Producing State: 2001

[In millions of short tons. As of January 1. The demonstrated reserve base represents the sum of coal in both measured and indicated resource categories of reliability. Measured resources of coal are estimates that have a high degree of geologic assurance from sample analyses and measurements from closely spaced and geological well known sample sites. Indicated resources are estimates based partly from sample and analyses and measurements and partly from reasonable geologic projections. For more information on the classification of coal resources and related terminology, see report cited below]

State	Type of coal					Method of mining	
	Total reserves	Anthracite	Bituminous	Sub-bituminous	Lignite	Under ground	Surface
United States	501,059	7,465	296,629	183,180	43,805	338,625	162,634

Section 19

Energy and Utilities

Section 19 presents statistics on fuel resources, energy production and consumption, electric energy, hydroelectric power, nuclear power, solar energy, wood energy, and the electric and gas utility industries. The principal sources are the Department of Energy's Energy Information Administration (EIA), the Edison Electric Institute, Washington, DC, and the American Gas Association, Arlington, VA. The EIA was created in 1977 and assumed the central responsibilities of all or part of the agencies including the Federal Energy Commission (FEC), the U.S. Bureau of Mines, the Federal Energy Administration, and the U.S. Energy Research and Development Administration. For additional data on transportation, see Section 18; and on energy-related housing characteristics, see Section 20.

EIA, in its *Annual Energy Review*, provides statistics and trend data on energy production, demand, and prices. Information is provided on petroleum and natural gas, electricity, hydroelectric power, nuclear power, solar, wood, and geothermal energy. Among its annual reports are *Annual Energy Review*, *Electric Power Industry Annual*, *Natural Gas Annual*, *Petroleum and Natural Gas Annual*, *State Energy Data Report*, *Energy Price and Expenditure*, *Financial Statistics of Selected Electric Utilities*, *Performance Profiles of Energy Producers*, *Annual Energy Outlook*, and *International Energy Annual*. Other various publications contain state, regional, and international data on production of electricity, net summer capacity, generating plants, fuels used in electricity production, energy sales and consumption, and hydroelectric power. The EIA also issues the *Monthly Energy Review*, which presents current supply, production, and price data and monthly variations on petroleum, coal, natural

gas, and electric power. Data on residential energy consumption, expenditures, and conservation activities are available from EIA's Residential Energy Consumption Survey and are published every 4 years.

The Edison Electric Institute's monthly bulletin and annual *Statistical Year Book of the Electric Utility Industry for the Year* contain data on the distribution of electric energy by public utilities; information on the electric power supply, expansion of electric generating facilities, and the manufacture of heavy electric power equipment is presented in the annual *Year-End Summary of the Electric Power Situation in the United States*. The American Gas Association, in its monthly and quarterly bulletins and its yearbook, *Gas Facts*, presents data on gas utilities and financial and operating statistics.

Btu conversion factors—Various energy sources are converted from original units to the thermal equivalent using British thermal units (Btu). A Btu is the amount of energy required to raise the temperature of 1 pound of water 1 degree Fahrenheit (F) at or near 39.2 degrees F. Factors are calculated annually from the latest final annual data available; some are revised as a result. The following list provides conversion factors used in 2001 for production and consumption, in that order, for various fuels: Petroleum, 5,800 and 5,326 mil. Btu per barrel; total coal, 21,072 and 20,753 mil. Btu per short ton; and natural gas (dry), 1,025 Btu per cubic foot for both. The factors for the production of nuclear power and geothermal power were 10,623 and 21,017 Btu per kilowatt-hour, respectively. The fossil fuel steam-electric power plant generation factor of 10,346 Btu per kilowatt-hour was used for hydroelectric power generation and for wood and waste, wind, photovoltaic, and solar thermal energy consumed at electric utilities.

NA Not available. Z Less than 50 trillion. ¹ Includes types of fuel not shown separately. ² Includes lease condensate. ³ Data on the generation of electricity in the United States represent net generation, which is gross output of electricity (measured at the generator terminals) minus power plant use. ⁴ Nuclear electricity generation data are gross outputs of electricity. ⁵ Alcohol is ethanol blended into motor gasoline. ⁶ Exports minus imports. ⁷ Petroleum products supplied, including natural gas plant liquids and crude oil burned as fuel. ⁸ Includes supplemental gaseous fuels.

No. 883. Energy Expenditures—End-Use Sector and Selected Source by State: 1999

[In millions of dollars (556,742 represents \$556,742,000,000). End-use sector and electric utilities exclude expenditures on energy sources such as hydroelectric, photovoltaic, solar thermal, wind, and geothermal. Also exclude expenditures for reported amounts of energy consumed by the energy industry for production, transportation, and processing operations]

Manufacturing Energy Consumption for all Purposes by Type of Fuel and Major Industry Group: 1998

Btu (23,783 represents 23,783,000,000,000). Estimates represented consumption of energy for all purposes (First use and unallocated demand for energy by manufacturers. "First Use" is all energy produced onsite, all energy produced directly from captive mines and wells or as byproducts from nonenergy materials (such as sawdust from furniture production from electrolysis of brine, nut shells from peanut processing). Based on the Manufacturing Energy Consumption subject to sampling variability)

6. Nuclear Power Plants—Number, Capacity, and Generation: 1980 to 2001

Item	1980	1985	1990	1995	1994	1996	1995	1997	1996	1996	2000	2001
generating units ¹	71	96	112	110	109	109	109	107	104	104	104	104
net capacity ^{1,2} (mil. kW)	51.8	79.4	99.6	99.1	99.1	99.5	100.8	99.7	97.1	97.4	97.4	98.1
generation (bil. kWh)	251.1	383.7	577.0	610.4	640.5	673.4	674.7	628.6	673.7	728.3	753.9	767.3
generation as a percent of total electric utility generation	11.0	15.5	19.1	19.1	19.7	20.1	19.6	18.0	18.6	19.7	19.8	20.3
capacity factor ³	56.3	58.0	66.0	70.5	73.8	77.4	76.2	71.1	78.2	85.3	88.1	89.3

¹ Year-end. ² Net summer capability is the peak steady hourly output that generating equipment is expected to supply load, exclusive of auxiliary and other power plant, as demonstrated by test at the time of summer peak demand. ³ Average of monthly capacity factors. Monthly factors are derived by dividing actual monthly generation by the maximum generation for the month (hours in month times net maximum dependable capacity).

No. 899. Nonutility Electric Power Producers—Summary by Type of Fuel: 1990 to 1999

[A nonutility power producer may be a corporation, person, agency, authority, or other legal entity or instrumentality that owns electric generating capacity and is not an electric utility. Nonutility power producers include qualifying cogenerators, qualifying small power producers, and other nonutility generators (including independent power producers) without a designated franchised service area, and which do not file forms listed in the Code of Federal Regulations, Title 18, Part 141]

Type of fuel	Unit	1980	1992	1993	1994	1995	1996	1997	1998	1999

- Represents zero. ¹ A public water system that supplies water to the same population year-round. ² A public water system that regularly supplies water to at least 25 of the same people at least 6 months per year, but not year-round. Some examples are schools, factories, and office buildings which have their own water systems. ³ A public water system that provides water in a place such as a gas station or campground where people do not remain for long periods of time.

Section 20

Construction and Housing

Section presents data on the construction industry and on various indicators of its activity and costs; on housing and their characteristics and occupancy rates for commercial buildings. Edition contains data from the 2001 American Housing Survey.

Principal source of these data is the Census Bureau, which issues a variety of current publications. Construction statistics compiled by the Census Bureau appear in its *New Residential Construction* and *New Residential Sales* press releases and Web sites <<http://www.census.gov/construction/>>. Statistics on expenditures on owners of residential properties are published quarterly and annually in *Expenditures for Residential Upkeep and Improvements*. *Value of New Construction Put in Place* presents data on all types of construction and includes monthly composite indexes. Reports of the censuses of construction industries (see below) are issued on various topics.

Census Bureau publications include the *Current Housing Reports* series, which includes the quarterly *Housing Vacancies*, the quarterly *Market Absorption* and *Departments*, the biennial *American Housing Survey* (formerly *Annual Housing Survey*), and reports of the censuses of manufacturing and of construction industries. *Construction Review*, published quarterly by the International Trade Administration, Department of Commerce, contains data from the census series and other construction statistics series from the federal government and private agencies.

Other sources include the monthly *Dodge Construction Potentials* of F. W. Dodge Company, McGraw-Hill Information Systems Company, New York, NY, which presents national and state data on construction contracts; the National Association of Home Builders with state-level data on housing starts; the NATIONAL ASSOCIATION OF REALTORS®, which presents data

on existing home sales; the Society of Industrial and Office Realtors and Oncor International on commercial office and industrial space; the Bureau of Economic Analysis, which presents data on residential capital and gross housing product; and the U.S. Energy Information Administration, which provides data on commercial buildings through its periodic sample surveys.

Censuses and surveys—Censuses of the construction industry were first conducted by the Census Bureau for 1929, 1935, and 1939; beginning in 1967, a census has been taken every 5 years (through 1997, for years ending in “2” and “7”). The latest complete reports are for 1997. The 1997 census results are part of the 1997 Economic Census. See Table 910. See also text, Section 15, Business Enterprise.

The construction sector of the economic census, covers all employer establishments primarily engaged in (1) building construction by general contractors or operative builders; (2) heavy (nonbuilding) construction by general contractors; and (3) construction by special trade contractors. The 1997 census was conducted in accordance with the 1997 *North American Industry Classification System* (NAICS); the 1992 census was conducted in accordance with the 1987 *Standard Industrial Classification* (SIC). This sector now includes construction management and land subdividers and developers, not included previously. See text, Section 15, Business Enterprise, for general information on the SIC and NAICS.

From 1850 through 1930, the Census Bureau collected some housing data as part of its censuses of population and agriculture. Beginning in 1940, separate censuses of housing have been taken at 10-year intervals. For the 1970 and 1980 censuses, data on year-round housing

units were collected and issued on occupancy and structural characteristics, plumbing facilities, value, and rent; for 1990 such characteristics were presented for all housing units.

The American Housing Survey (*Current Housing Reports Series H-150 and H-170*), which began in 1973, provided an annual and ongoing series of data on selected housing and demographic characteristics until 1983. In 1984, the name of the survey was changed from the Annual Housing Survey. Currently, national data are collected every other year, and data for selected metropolitan areas are collected on a rotating basis. All samples represent a cross section of the housing stock in their respective areas. Estimates are subject to both sampling and nonsampling errors; caution should therefore be used in making comparisons between years.

Data on residential mortgages were collected continuously from 1890 to 1970,

except 1930, as part of the decennial census by the Census Bureau. Since 1973, mortgage status data, limited to single family homes on less than 10 acres with no business on the property, have been presented in the American Housing Survey. Data on mortgage activity are covered in Section 25, Banking and Finance.

Housing units—In general, a housing unit is a house, an apartment, a group of rooms or a single room occupied or intended for occupancy as separate living quarters; that is, the occupants live separately from any other individual in the building, and there is direct access from the outside or through a common hall. Transient accommodations, barracks for workers, and institutional-type quarters are not counted as housing units.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

No. 909. Construction—Establishments, Employees, and Payroll by Kind of Business (NAICS Basis): 1999 and 2000

[For establishments with payroll. (6,201.6 represents 6,201,600). See Appendix III]

Industry	NAICS code	Establishments		Paid employees ² (1,000)		Annual payroll (mil. dol.)	
		1999	2000	1999	2000	1999	2000
Construction	23	696,541	709,590	6,201.6	6,572.8	219,067.1	239,910.1

No. 911. Construction Materials—Producer Price Indexes: 1990 to 2001

[1982=100, except as noted. Data for 2001 are preliminary. For discussion of producer price indexes, see text, Section 14. Prices. This index, more formally known as the special commodity grouping index for construction materials, covers materials incorporated as integral part of a building or normally installed during construction and not readily removable. Excludes consumer durables such as kitchen ranges, refrigerators, etc. This index is not the same as the stage-of-processing index of intermediate materials and components for construction]

Commodity	1990	1994	1995	1996	1997	1998	1999	2000	2001
Construction materials	119.6	133.8	138.8	139.6	142.1	141.4	142.8	144.1	142.8
Interior solvent based paint	133.0	148.1	164.5	175.6	180.5	185.7	188.0	191.1	190.2
Construction products from plastics	117.2	122.9	133.8	130.9	128.2	126.2	128.0	135.8	133.1
Douglas fir, dressed	138.4	236.2	198.8	227.1	221.3	186.1	212.1	185.2	178.0
Southern pine, dressed	111.2	182.6	166.9	177.9	201.2	177.3	185.7	161.0	152.5
Millwork	130.4	162.4	163.8	166.6	170.9	171.1	174.7	176.4	179.1

C. A. Turner Telephone Plant ¹¹	79	77	87	96	102	102	101	103	106

¹ Weighted average of the various indexes used to deflate the Construction Put in Place series. In calculating the index, the weights (i.e., the composition of current dollar estimates in 1996 by category) are held constant.
² Derived ratio of total current to constant dollar Construction Put in Place (multiplied by 100).
³ Excludes value of site.
⁴ Based on average contract unit bid prices for composite mile (involving specific average amounts of excavation, paving, reinforcing steel, structural steel, and structural concrete).
⁵ Derived from the four quarterly indexes which are weighted averages of costs of labor, materials, and equipment for the construction of dams and reclamation projects.
⁶ Based on firm's cost experience with respect to labor rates, materials prices, competitive conditions, efficiency of plant and management, and productivity.
⁷ Building construction index computed on the basis of a hypothetical unit of construction requiring 6 bbl. of portland cement, 1,088 M bd. ft. of 2" x 4" lumber, 2,500 lb. of structural steel, and 68.38 hours of skilled labor. General construction index based on same materials components combined with 200 hours of common labor.
⁸ Based on data covering public utility construction costs in six geographic regions. Covers skilled and common labor.
⁹ As derived by U.S. Census Bureau. Covers steam generation plants only.
¹⁰ As derived by U.S. Census Bureau. Reflects costs for structures and improvements at water pumping and treatment plants.
¹¹ Computed by the Census Bureau by averaging the weighted component indexes published for six geographic regions.

Source: U.S. Census Bureau, *Current Construction Reports*, Series C30, *Value of Construction Put in Place*. Also in U.S. International Trade Administration, *Construction Review*, quarterly.

No. 913. Value of New Construction Put in Place: 1964 to 2001

[In millions of dollars (75,097 represents \$75,097,000,000). Represents value of construction put in place during year; differs from building permit and construction contract data in timing and coverage. Includes installed cost of normal building service equipment and selected types of industrial production equipment (largely site fabricated). Excludes cost of shipbuilding, land, and most types of machinery and equipment. For methodology, see Appendix III]

Year	Current dollars					Constant (1996) dollars				
	Private				Public	Private				Public
	Total	Total ¹	Residential buildings	Nonresidential buildings		Total	Total ¹	Residential buildings	Nonresidential buildings

No. 914. Value of New Construction Put in Place by Type: 1990 to 2001

[In millions of dollars (476,778 represents \$476,778,000,000). Represents value of construction put in place during year; differs from building permit and construction contract data in timing and coverage. Includes installed cost of normal building service equipment and selected types of industrial production equipment (largely site fabricated). Excludes cost of shipbuilding, land, and most types of machinery and equipment. For methodology, see Appendix III]

Type of construction	Current dollars					Constant (1986) dollars

No. 915. Value of Private Nonresidential Construction Put In Place: 1993 to 2001

[In millions of dollars (110,996 represents \$110,996,000,000). Represents value of construction put in place during year; differs from building permit and construction contract data in timing and coverage. Data are not directly comparable to Tables 913 and 914 due to a new classification system which bases project types on their end usage instead of building/nonbuilding and ownership types. See Appendix "II"]

17. Construction Contracts—Value of Construction and Floor Space of Buildings by Class of Construction: 1980 to 2001

represents \$151,800,000,000. Building construction includes new structures and additions; nonbuilding construction includes alterations to existing structures which affect only valuation, since no additional floor area is created by "alteration"]

Year	Nonresidential buildings											
	Total	Residential buildings	Total	Commercial ¹	Manufacturing	Educational ²	Health	Public buildings	Religious	Social and recreational	Miscellaneous	Nonbuilding construction

No. 925. New Manufactured (Mobile) Homes Placed for Residential Use and Average Sales Price by Region: 1980 to 2001

[233.7 represents 233,700. A mobile home is a moveable dwelling, 8 feet or more wide and 40 feet or more long, designed to be towed on its own chassis, with transportation gear integral to the unit when it leaves the factory, and without need of permanent foundation. Excluded are travel trailers, motor homes, and modular housing. Data are based on a probability sample and subject to sampling variability; see source. For composition of regions, see map inside front cover]

No. 941. Occupied Housing Units—Costs by Region: 2001

(As of fall. (72,265 represents 72,265,000). Specified owner-occupied units are limited to one-unit structures on less than 10 acres and no business on property. Specified renter-occupied units exclude one-unit structures on 10 acres or more. See headline Table 942 for an explanation of housing costs. Based on the American Housing Survey; see Appendix III. For composition of regions, see map inside front cover)

Section 21

Manufactures

ection presents summary data for factoring as a whole and more ad information for major industry s and selected products. The types asures shown at the different levels e data for establishments, employ- and wages, plant and equipment iditures, value and quantity of pro- n and shipments, value added by facture, inventories, and various tors of financial status.

rincipal sources of these data are ensus Bureau reports of the cen- of manufactures conducted every s, the *Annual Survey of Manufac- and Current Industrial Reports*. ts on current activities of industries rent movements of individual omies are compiled by such govern- agencies as the Bureau of Labor Sta- ; the Economic Research Service of partment of Agriculture; the Inter- ial Trade Administration; and by pri- e research or trade associations such e Conference Board, Inc., the Ameri- on and Steel Institute, the Electronic ries Association, and il others.

in financial aspects of manufactur- duries are collected by the Bureau omic Analysis (BEA) and the U.S. s Bureau. Industry aggregates in the of balance sheets, profit and loss rents, analyses of sales and ses, lists of subsidiaries, and types ounts of security issues are pub- for leading manufacturing corpora- egered with the Securities and nge Commission. The BEA issues n capital in manufacturing indus- nd capacity utilization rates in acturing. See also Section 15, ss Enterprise.

il private trade associations provide ry coverage for certain sections of onomy. They include the Aluminum ation (Table 976), American Iron

and Steel Institute (Tables 977-979), Con- sumer Electronics Association (Tables 987 and 988), and the Aerospace Industries Association (Tables 995-997). Machine tool consumption data (Table 980) is pro- duced jointly by the Association for Manu- facturing Technology and American Machine Tool Distributors Association.

Censuses and annual surveys—The first census of manufactures covered the year 1809. Between 1809 and 1963, a census was conducted at periodic inter- vals. Since 1967, it has been taken every 5 years (for years ending in "2" and "7"). Results from the 1997 census are pre- sented in this section utilizing the new NAICS (North American Industry Classifi- cation System). For additional information see text, Section 15, Business Enterprise, and the Census Bureau Web site at <<http://www.census.gov/epcd/www/NAICS.html>>. Census data either direct reports or estimates from administrative records, are obtained for every manufact- uring plant with one paid employee or more.

The *Annual Survey of Manufactures* (ASM), conducted for the first time in 1949, collects data for the years between censuses for the more general measure of manufacturing activity covered in detail by the censuses. The annual survey data are estimates derived from a scientifically selected sample of establishments. The 1999 annual survey is based on a sample of about 55,000 establishments of an approximate total of 230,000. These establishments represent all manufact- uring establishments of multiunit compa- nies and all single-establishment manu- facturing companies mailed schedules in the 1997 Census of Manufactures. For the current panel of the ASM sample, all establishments of companies with 1997 shipments in manufacturing in excess of \$500 million were included in the survey with certainty. For the remaining portion of the mail survey, the establishment was

defined as the sampling unit. For this portion, all establishments with 250 employees or more and establishments with a very large value of shipments also were included. Therefore, of the 58,000 establishments included in the ASM panel, approximately 33,000 are selected with certainty. These establishments account for approximately 80 percent of total value of shipments in the 1992 census. Smaller establishments in the remaining portion of the mail survey were selected by sample.

Establishments and classification—

The censuses of manufactures for 1947 through 1992 cover operating manufacturing establishments as defined in the *Standard Industrial Classification Manual* (SIC), issued by the U.S. Office of Management and Budget (see text, Section 12). The Manual is also used for classifying establishments in the annual surveys. The comparability of manufactures data over time is affected by changes in the official definitions of industries as presented in the Manual. It is important to note, therefore, that the 1987 edition of the Manual was used for the 1987 and 1992 censuses; and the 1972 edition of the Manual and the 1977 Supplement were used for the 1972 through 1982 censuses.

The Manual defines an industry as a number of establishments producing a single product or a closely related group of products. In the manual, an establishment is classified in a particular industry if its production of a product or product group exceeds in value added its production of any other product group. While some establishments produce only the products of the industry in which they are classified, few within an industry specialize to

that extent. The statistics on employment, payrolls, value added, inventories, and expenditures, therefore, reflect both the primary and secondary activities of the establishments in that industry. For this reason, care should be exercised in relating such statistics to the total shipments figures of products primary to the industry.

Most tables in this section use the new way of organizing economic statistics called the North American Industry Classification System (NAICS). For more information on this system, see *North American Industry Classification System (NAICS) - United States, 1997*.

Establishment—Establishment signifies a single physical plant site or factory. It is not necessarily identical to the business unit or company, which may consist of one or more establishments. A company operating establishments at more than one location is required to submit a separate report for each location. An establishment engaged in distinctly different lines of activity and maintaining separate payroll and inventory records is also required to submit separate reports.

Durable goods—Items with a normal life expectancy of 3 years or more. Automobiles, furniture, household appliances, and mobile homes are common examples.

Nondurable goods—Items which generally last for only a short time (3 years or less). Food, beverages, clothing, shoes, and gasoline are common examples.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

No. 954. Gross Domestic Product in Manufacturing in Current and Real (1996) Dollars by Industry: 1990 to 2000

[In billions of dollars (5,803.2 represents 5,803,200,000,000). Data are based on the 1987 Standard Industrial Classification (SIC). Data include nonfactor charges (capital consumption allowances, indirect business taxes, etc.) as well as factor charges against gross product; corporate profits and capital consumption allowances have been shifted from a company to an establishment basis]

American Industry Classification System, 1997; see Text, Section 15, Business. ² Includes employment and payroll live offices and auxiliary units. All employees represents the average of production workers plus all other employees. ³ Period ended nearest the 12th of March. Production workers represents the average of the employment for the period ended nearest the 12th of March, May, August, and November. ⁴ Adjusted value added; takes into account (a) intermerchandising operations (that is, difference between the sales value and cost of merchandise sold without further processing, or assembly), plus (b) net change in finished goods and work-in-process inventories between beginning and ending year. ⁵ Includes extensive and unmeasurable duplication from shipments between establishments in the same location.

6. Value of Manufactures' Shipments, Inventories, and New Orders by Market Grouping: 1996 to 2001

in billions of dollars (3,597,188 represents 3,597,188,000,000). Based on a sample survey; for methodology, see publication *U.S. Census Bureau, Current Industrial Reports, Manufacturers' Shipments, Inventories, and Orders: 1992-2001*, 1(01). These data are now on a NAICS (North American Industry Classification System) basis and not comparable to previous years which were based on the Standard Industrial Classification system)

Market grouping	1996	1997	1998	1999	2000	2001
SHIPMENTS						
manufacturing industries	3,597,188	3,834,699	3,899,813	4,031,887	4,217,854	3,971,431
goods	1,309,819	1,375,603	1,364,326	1,438,519	1,516,994	1,488,780
durable goods	345,266	377,280	385,918	426,337	405,093	381,163
nondurable goods	964,553	998,323	978,408	1,012,182	1,111,901	1,107,617
parts	80,582	100,126	116,812	120,242	111,023	119,079
aircraft and parts	29,693	27,472	26,938	27,719	24,417	28,102
nonaircraft and parts	50,889	72,654	89,874	92,523	86,606	90,977

No. 971. Broadwoven and Knit Fabrics—Shipments and Foreign Trade: 2000

[3,717,511 represents 3,717,511,000. Fabric blends as shown in the report are reported based on the chief weight of the fiber; whereas, fabric blends as shown for imports are based on the chief value of the fiber. Apparent consumption represents new domestic supply and is derived by subtracting exports for the total manufacturers' shipments plus imports]

Product description	Manufacturers' shipments (quantity)	Imports for consumption		Percent imports to manufacturers' shipments	Exports of domestic merchandise		Percent exports to manufacturers' shipments
		Quantity	Value ¹ (\$1,000)		Quantity	Value (\$1,000)	
BROADWOVEN FABRICS (quantity 1,000 sq. meters)							
Cotton fabrics ²	3,717,511	1,617,753	1,853,891	43.5	534,094	1,097,679	14.4

¹ North American Industrial Classification System, 1997; see Text, Section 15, Business Enterprise. ² Includes employment and payroll at administrative offices and auxiliary units. All employees represents the average of production workers plus all other employees for the payroll period ended nearest the 12th of March. Production workers represents the average of the employment for the payroll periods ended nearest the 12th of March, May, August, and November. ³ Includes extensive and unmeasurable duplication from shipments between establishments in the same industry classification.

D Withheld to avoid disclosing data for individual companies. ¹ Includes combination refrigerator-freezers. ² Product code 3352221000 and 3352222000 are combined to avoid disclosing data for individual companies.

Source: U.S. Census Bureau, 1990, *Current Industrial Reports, Series MA36F*; thereafter *Series MA335F*. See also <<http://www.census.gov/ftp/pub/industry/1/ma335f01.pdf>> (issued August 2002).

Section 22

Domestic Trade

tion presents statistics relating to distributive trades, specifically wholesale and retail trade. Data shown for these are classified by kind of business and cover sales or receipts, establishments, employees, payrolls, and other principal sources of these data from the Census Bureau and include the 1997 *Economic Census* reports, county survey reports, and the *County Business Patterns* program. These data are complemented by several tables from associations such as the National Automobile Dealers Association (Table 1006), several notable research groups represented such as Claritas (Table 1006), National Research Bureau International Council of Shopping Centers (Tables 1023 and 1024), Jupiter Research (Table 1018), and Forrester Research, Inc. (Table 1017).

Retail and wholesale trade appear in other sections. For instance, retail employment and earnings (Table 603) appear in Section 12, Retail Trade, Employment, and Earnings; domestic product of the industry (Table 32) appear in the Section 13, Expenditures, and Wealth; financial (several tables) from the quarterly *Statistics of Income Bulletin*, published by the Internal Revenue Service, appear in Section 15, Business Enterprise.

Censuses—Censuses of retail trade and wholesale trade have been taken at intervals since 1929. Beginning with the 1997 census, legislation provides for censuses of each area to be conducted every 5 years (for years ending in “2” and “7” for more information on these censuses see the *History of the 1997 Economic Census* found at <<http://www.census.gov/prod/ec97/pol00-hec.pdf>>. The industries covered in the censuses are those sectors of business are those classified in 3 sectors defined in the *North American Industry Classification System*, NAICS (see below). *Retail trade* establishments of business primarily

engaged in retailing merchandise generally in small quantities to the general public; and *wholesale trade*, to establishments primarily engaged in selling goods to other businesses and normally operate from a warehouse or office that have little or no display of merchandise. All Census Bureau tables in this section are utilizing the new NAICS codes, which replaced the Standard Industrial Classification (SIC) system. NAICS makes substantial structural improvements and identifies over 350 new industries. At the same time, it causes breaks in time series far more profound than any prior revision of the previously used SIC system. For information on this system and how it affects the comparability of retail and wholesale statistics historically, see text, Section 15, Business Enterprise, and especially the Census Bureau Web site at <<http://www.census.gov/epcd/www/naics.html>>. In general, the 1997 Economic Census has two series of publications and documents for these two sectors subject series with reports on such as commodity line sales and establishment and firm sizes and geographic reports with individual reports for each state. For information on these series, see the Census Bureau Web site at <<http://www.census.gov/epcd/www/97EC42.htm>> and <<http://www.census.gov/epcd/www/97EC44.htm>>.

Current surveys—Current sample surveys conducted by the Census Bureau cover various aspects of the retail and wholesale trade. Its *Monthly Retail Trade and Food Services* contains monthly estimates of sales, inventories, and inventory/sales ratios, purchases, and accounts receivable for the United States, by kind of business. Annual figures on sales, year-end inventories, and inventory/sales ratios, by kind of business, appear in the *Annual Benchmark Report for Retail Trade and Food Services*. Statistics from the Bureau's monthly wholesale trade survey include national estimates of merchant wholesalers' sales, inventories, and inventory/sales ratios by

major summary groups “durable and non-durable,” and selected kinds of business. Merchant wholesalers are those wholesalers who take title to the goods they sell (e.g., jobbers, exporters, importers, industrial distributors). These data, based on reports submitted by a sample of firms, appear in the *Monthly Wholesale Trade Report*. Annual figures on sales, inventory/sales ratios, year-end inventories, and purchases appear in the *Annual Benchmark Report for Wholesale Trade*. The reports just mentioned may appear in print in some cases, but principally are available as documents on the Census Bureau Web site at <<http://www.census.gov/econ/www/retmenu.html>>.

E-commerce—Electronic commerce (or e-commerce) are sales of goods and services over the Internet and extranet, electronic data interchange (EDI), or other online systems. Payment may or may not be made online. This edition has several

tables on e-commerce sales such as Tables 1020 to 1022 in this section, 959 in Section 21, Manufactures, and 1247 in Section 27, Accommodation, Food Services, and Other Services. Also, there are several private sources for similar data such as Forrester Research Inc., Cambridge MA; BizRate.com, Los Angeles, CA; and Jupiter Media Matrix, New York, NY. These sources show estimated and projected online retail sales by key categories from business to consumers or to other businesses. Their methods of collecting the data vary widely between the sources and consequently these estimates of this activity vary also. Users of these estimates may want to contact the sources for descriptions of their methodology.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

999. Wholesale and Retail Trade—Establishments, Employees, and Payroll by State: 1999 and 2000

represents 5,972,000. Covers establishments with payroll. Employees are for the week including March 12. Excludes most ment employees, railroad employees, and self-employed persons. Kind-of-business classification based on North American y Classification System (NAICS); see text, Section 15, Business Enterprise. For statement on methodology, see Appendix

No. 1023. Shopping Centers—Number, Gross Leasable Area, and Retail Sales by Gross Leasable Area: 1990 to 2001

[4,390 represents 4,390,000,000. As of December 31. A shopping center is a group of architecturally unified commercial establishments built on a site that is planned, developed, owned, and managed as an operating unit related in its location, size, and type of shops to the trade area that the unit serves. The unit provides on-site parking in definite relationship to the types and total size of the stores. The data base attempts to include all centers with three or more stores. Estimates are based on a sample of data available on shopping center properties; for details, contact source]

Year	Gross leasable area (sq. ft.)						
	Total	Less than 100,001	100,001-200,000	200,001-400,000	400,001-800,000	800,001-1,000,000	More than 1 million

Section 23

Transportation

Section presents data on civil air transportation, both passenger and cargo, and on water transportation, including inland waterways, oceanborne commerce, merchant marine, cargo, and vessel registries.

Section also presents statistics on revenues, passenger and freight traffic volume, and employment in various mode-producing modes of the transportation industry, including motor vehicles, aircraft, and pipelines. Data are also presented on highway mileage and finances, motor vehicle travel, accidents, and registrations; and characteristics of public transit, railroads, and pipelines.

Principal sources of air and water transportation data are the annual *National Transportation Statistics*, issued by the Bureau of Transportation Statistics; *Annual Report* issued by the Air Transportation Association of America, Washington, and the annual *Waterborne Commerce of the United States* issued by the Bureau of Engineers of the Department of Army. In addition, the U.S. Census Bureau in its commodity transportation survey (part of the census of transportation taken every 5 years through 1997, years ending in "2" and "7") provides information on the type, weight, and value of commodities shipped by manufacturing establishments in the United States, by mode of transportation, origin, and destination. The latest complete reports for air are part of the 1997 Economic Census text, Section 15, Business Enterprise for a discussion of the 1997 Economic Census.

Principal sources of data on water transportation include *Merchant Fleets of the World*, issued periodically by the U.S. Coast Guard Administration; *The Bulletin*, published monthly by the American Bureau of Shipping, New York, NY; and the annual *Fleet Statistics*.

The principal compiler of data on public roads and on operation of motor vehicles is the U.S. Department of Transportation's (DOT) Federal Highway Administration (FHWA). These data appear in FHWA's annual *Highway Statistics* and other publications.

The U.S. National Highway Traffic Safety Administration issues data on traffic accident deaths and death rates in two annual reports: the *Fact Book* and the *Fatal Accident Reporting System Annual Report*. DOT's Federal Railroad Administration presents data on accidents involving railroads in its annual *Accident/Incident Bulletin*, and the *Rail-Highway Crossing Accident/Incident and Inventory Bulletin*.

The data for the truck transportation component of the 1997 Economic Census are presented in the *Truck Inventory and Use Survey*.

Data are also presented in many nongovernment publications. Among them are the weekly and annual *Cars of Revenue Freight Loaded* and the annual *Yearbook of Railroad Facts*, both published by the Association of American Railroads, Washington, DC; *Transit Fact Book*, containing electric railway and motorbus statistics, published annually by the American Public Transit Association, Washington, DC.; *Accident Facts*, issued by the National Safety Council, Chicago, IL; and *Transportation in America*, issued by the Eno Foundation for Transportation, Westport, Connecticut.

Civil Aviation—Federal promotion and regulation of civil aviation have been carried out by the FAA and the Civil Aeronautics Board (CAB). The CAB promoted and regulated the civil air transportation industry within the United States and between the United States and foreign countries. The Board granted licenses to provide air transportation service, approved or disapproved proposed rates and fares, and approved or disapproved

proposed agreements and corporate relationships involving air carriers. In December 1984, the CAB ceased to exist as an agency. Some of its functions were transferred to the Department of Transportation (DOT), as outlined below. The responsibility for investigation of aviation accidents resides with the National Transportation Safety Board.

The Office of the Secretary, DOT aviation activities include: negotiation of international air transportation rights, selection of U.S. air carriers to serve capacity controlled international markets, oversight of international rates and fares, maintenance of essential air service to small communities, and consumer affairs. DOT's Bureau of Transportation Statistics (BTS) handles aviation information functions formerly assigned to CAB. Prior to BTS, the Research and Special Programs Administration handled these functions.

The principal activities of the FAA include: the promotion of air safety; controlling the use of navigable airspace; prescribing regulations dealing with the competency of airmen, airworthiness of aircraft and air traffic control; operation of air route traffic control centers, airport traffic control towers, and flight service stations; the design, construction, maintenance, and inspection of navigation, traffic control, and communications equipment; and the development of general aviation.

The CAB published monthly and quarterly financial and traffic statistical data for the certificated route air carriers. BTS continues these publications, including both certificated and noncertificated (commuter) air carriers. The FAA publishes annually data on the use of airway facilities; data related to the location of airmen, aircraft, and airports; the volume of activity in the field of nonair carrier (general aviation) flying; and aircraft production and registration.

General aviation comprises all civil flying (including such commercial operations as small demand air taxis, agriculture application, powerline patrol, etc.) but excludes certificated route air carriers, supplemental operators, large-aircraft commercial operators, and commuter airlines.

Air carriers and service—The CAB previously issued "certificates of public convenience and necessity" under Section 401 of the Federal Aviation Act of 1958 for scheduled and nonscheduled (charter) passenger services and cargo services. It also issued certificates under Section 418 of the Act to cargo air carriers for domestic all-cargo service only. The DOT Office of the Secretary now issues the certificates under a "fit, willing, and able" test of air carrier operations. Carriers operating only a 60-seat-or-less aircraft are given exemption authority to carry passengers, cargo, and mail in scheduled and nonscheduled service under Part 298 of the DOT (formerly CAB) regulations. Exemption authority carriers who offer scheduled passenger service to an essential air service point must meet the "fit, willing, and able" test.

Vessel shipments, entrances, and clearances—Shipments by dry cargo vessels comprise shipments on all types of watercraft, except tanker vessels; shipments by tanker vessels comprise all types of cargo, liquid and dry, carried by tanker vessels.

A vessel is reported as entered only at the first port which it enters in the United States, whether or not cargo is unloaded at that port. A vessel is reported as cleared only at the last port at which clearance is made to a foreign port, whether or not it takes on cargo. Army and Navy vessels entering or clearing without commercial cargo are not included in the figures.

Units of measurement—Cargo (or freight) tonnage and shipping weight both represent the gross weight of the cargo including the weight of containers, wrappings, crates, etc. However, shipping weight excludes lift and cargo vans and similar substantial outer containers. Other tonnage figures generally refer to stowing capacity of vessels, 100 cubic feet being called 1 ton. Gross tonnage comprises the space within the frames and the ceiling of the hull, together with those closed-in spaces above deck available for cargo, stores, passengers, or crew, with certain minor exceptions. Net or registered tonnage is the gross tonnage less the spaces occupied by the propelling machinery,

w quarters, master's cabin, and on spaces. Substantially, it represents space available for cargo and passengers. The net tonnage capacity of a ship bears little relation to weight of leadweight tonnage is the weight of ballast required to depress a vessel to a certain draft water line (that is, with only machinery and equipment on board) in a specified draft. It is, therefore, the weight of cargo, fuel, etc., which a vessel is required to carry with safety.

Federal-aid highway systems—The Intermodal Surface Transportation Efficiency Act (ISTEA) of 1991 eliminated the traditional Federal-Aid Highway System and created the National Highway System and authorized other federal-aid highway categories. The final NHS was approved by Congress in December of 1995 under the National Highway System Designation Act.

Functional systems—Roads and streets are grouped into functional systems according to the type of service intended. The functional systems are (1) arterial highways which generally handle the long trips, (2) collector facilities that collect and distribute traffic between the arterials and the local streets, and (3) local roads and streets that primarily serve direct access to residential areas, farms, and other local destinations.

Regulatory bodies—The ICC, created by Congress to regulate transportation interstate commerce, has jurisdiction over railroads, trucking companies, air carriers, freight forwarders, water carriers, pipeline pipelines, and transportation carriers. The Federal Energy Regulatory Commission is responsible for rates and charges for transportation of natural gas and for establishing rates or charges for transportation of electric energy.

Motor carriers—For 1960-73, Class I motor carriers of freight were classified by the ICC as those with \$1 million or more in gross annual operating revenue; for 1974-76, the class minimum was \$3 million; and effective January 1, 1980, Class I carriers were those with \$5 million or more in gross annual operating revenue. For 1960-68, Class I motor carriers of passengers were classified by the

ICC as those with \$200,000 or more of gross annual operating revenue; for 1969-76, as those with revenues of \$1 million or more; and since 1977, as those with \$3 million or more. Effective January 1, 1988, Class I motor carriers of passengers are those with \$5 million or more in operating revenues; Class II less than \$5 million in operating revenues.

Railroads—Railroad companies reporting to the ICC are divided into specific groups as follows: (1) Regular line-haul (interstate) railroads (and their nonoperating subsidiaries), (2) switching and terminal railroads, (3) private railroads prior to 1964 (identified by ICC as "circular" because they reported on brief circulars), and (4) unofficial railroads, so designated when their reports are received too late for tabulation. For the most part, the last three groups are not included in the statistics shown here.

For years prior to 1978, Class I railroads were those with annual revenues of \$1 million or more for 1950-55; \$3 million or more for 1956-64; \$5 million or more for 1965-75; and \$10 million or more for 1976-77. In 1978, the classification became Class I, those having more than \$50 million gross annual operating revenue; Class II, from \$10 million to \$50 million+; and Class III, less than \$10 million. Effective January 1, 1982, the ICC adopted a procedure to adjust the threshold for inflation by restating current revenues in constant 1978 dollars. In 1988, the criteria for Class I and Class II railroads were \$92.0 million and \$18.4 million, respectively. Also effective January 1, 1982, the ICC adopted a Carrier Classification Index Survey Form for carriers not filing annual report Form R-1 with the commission. Class II and Class III railroads are currently exempted from filing any financial report with the Commission. The form is used for reclassifying carriers.

The Surface Transportation Board (STB) was established pursuant to the ICC Termination Act of 1995, Pub. L. No. 104-88, 109 Stat. 803 (1995) (ICCTA), to assume certain of the regulatory functions that had been administered by the Interstate Commerce Commission. The Board has broad economic regulatory oversight of railroads, addressing such matters as rate

reasonableness, car service and interchange, mergers and line acquisitions, line construction, and line abandonments. 49 U.S.C. 10101-11908. Other ICC regulatory functions were either eliminated or transferred to the Federal Highway Administration or the Bureau of Transportation Statistics within DOT.

Class I Railroads are regulated by the STB and subject to the Uniform System of Accounts and required to file annual and periodic reports. Railroads are classified based on their annual operating revenues. The class to which a carrier belongs is determined by comparing its adjusted operating revenues for 3 consecutive years to the following scale: Class I, \$250 million or more, Class II \$20 million to \$250 million, and Class III \$0 to 20 million.

Postal Service—The Postal Service provides mail processing and delivery services within the United States. The Postal Reorganization Act of 1970 created the Postal Service, effective July 1971, as an independent establishment of the Federal Executive Branch.

Revenue and cost analysis describes the Postal Service's system of attributing revenues and costs to classes of mail and service. This system draws primarily upon probability sampling techniques to develop estimates of revenues, volumes, and weights, as well as costs by class of mail and special service. The costs attributed to classes of mail and special services are primarily incremental costs which vary in response to changes in volume; they account for roughly 60 percent of the total costs of the Postal Service. The balance represents "institutional costs." Statistics on revenues, volume of mail, and distribution of expenditures are presented in the Postal Service's annual report, *Cost and Revenue Analysis*, and its *Annual Report of the Postmaster General* and its annual *Comprehensive Statement on Postal Operations*.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

No. 1028. Transportation-Related Components of U.S. Gross Domestic Product: 1980 to 2000

[In billions dollars (349.4 represents \$349,400,000,000), except percent]

Item	1980	1985	1990	1995	2000
CURRENT DOLLARS					
Total transportation-related final demand	349.4	495.9	618.7	782.0	1,053.6

NA Not available. ¹ Data on deaths are from U.S. National Highway Traffic Safety Administration and are based on 30 day definition. Includes only police reported crashes. For more detail, see Table 1077. ² Accidents which result in damages to railroad property. Grade crossing accidents are also included when classified as a train accident. Deaths exclude fatalities in railroad-highway grade crossing accidents. ³ Includes scheduled and nonscheduled (charter) air carriers. Represents serious injuries. ⁴ All scheduled services. Represents serious injuries. ⁵ All nonscheduled service. Represents serious injuries. ⁶ Accidents resulting in death, injury or requiring medical treatment beyond first aid; damages exceeding \$500; or a person's disappearance. ⁷ Beginning 1990, pipeline accidents/incidents are credited to year of occurrence; 1980 data are credited to the year filed. ⁸ Covers accidents involving commercial vessels which must be reported to U.S. Coast Guard if there is property damage exceeding \$25,000; material damage affecting the seaworthiness or efficiency of a vessel; stranding or grounding; loss of life; or injury causing a person's incapacity for more than 3 days. ⁹ Reporting criteria and source of data changed between 1989 and 1990; these data from 1990 to present are not comparable to earlier years. ¹⁰ Accidents, deaths, and injuries involving hazardous materials cover all types of transport.

No. 1042. On-Time Flight Arrivals and Departures at Major U.S. Airports: 2001

[In percent. Quarterly, based on gate arrival and departure times for domestic scheduled operations of U.S. major airlines. All U.S. airlines with 1 percent or more of total U.S. domestic scheduled airline passenger revenues are required to report on-time data. A flight is considered on time if it operated less than 15 minutes after the scheduled time shown in the carrier's computerized reservation system. Cancelled and diverted flights are considered late. See source for data on individual airlines.]

NA Not available. X Not applicable. ¹ Existing airports, heliports, seaplane bases, etc. recorded with FAA. Includes military airports with joint civil and military use. Includes U.S. outlying areas. Airport-type definitions: Public—publicly owned and under control of a public agency; private—owned by a private individual or corporation. May or may not be open for public use.

² Certificated airports serve air-carriers with aircraft seating more than 30 passengers. ³ Air-carrier aircraft are aircraft carrying passengers or cargo for hire under 14 CFR 121 (large aircraft—more than 30 seats) and 14 CFR 135 (small aircraft—30 seats or fewer).

⁴ Beginning 1995 excludes commuters. ⁵ Source: U.S. Federal Aviation Administration. See Internet site <<http://api.hq.faa.gov/civilair/index.htm>> for data beginning 1990 (accessed 19 June 2002). Prior years in the *Statistical Handbook of Aviation*, annual.

⁶ Data for 1980 and 1985 are for helicopters only. ⁷ All certificates on record. No medical examination required. Data for 1996 and 1997 are limited to certificates held by those under 70 years of age.

No. 1046. Federal Expenditures for Civil Functions of the Corps of Engineers, United States Army: 1970 to 1999

[In millions of dollars (1,128 represents \$1,128,000,000). For fiscal years ending in year shown, see text, Section 8, State and Local Government Finances and Employment. These expenditures represent the work of the Corps of Engineers to plan, design, construct, operate, and maintain civil works projects and activities, particularly in the management and improvement of rivers, canals, and waterways for navigation, flood control, and multiple purposes. The amounts listed below do not include the expenditure of funds contributed, advanced, or reimbursed by other government agencies or local interests. Includes Puerto Rico and outlying areas]

Fiscal year	Total program ¹	Navigation	Flood control	Multiple purpose	Fiscal year	Total program	Navigation	Flood control	Multiple purpose
1970	1,128	398	379	331	1992	3,675	1,562	1,469	489
1980	3,061	1,225	1,228	551	1993	3,335	1,461	1,243	464
1985	2,956	1,234	1,187	419	1994	3,727	1,607	1,436	521
1987	2,937	1,135	1,272	411	1995	3,796	1,620	1,399	598
1988	3,066	1,271	1,271	423	1996	3,627	1,566	1,349	557
1989	3,252	1,395	1,253	462	1997	3,745	1,620	1,430	545
1990	3,297	1,391	1,397	375	1998	4,091	1,660	1,523	618
1991	3,511	1,473	1,447	443	1999	4,429	1,709	1,774	592

¹ Includes expenditures which are not associated with a specific purpose (e.g., headquarters staff supervision, management, and administration activities, and some research and development activities).

¹ As of June 30, except beginning 1980, as of Sept. 30. Estimates of personnel employed on merchant ships, 1,000 gross tons and over. Excludes vessels on inland waterways, Great Lakes, and those owned by, or operated for, U.S. Army and Navy, and special types such as cable ships, tugs, etc. ² As of January. Basic monthly wage, over and above subsistence (board and room); excludes overtime and fringe pay benefits. West coast incorporates extra pay for Saturdays and Sundays at sea into base wages but east coast does not.

¹ Bridges are structurally deficient if they have been restricted to light vehicles, require immediate rehabilitation to remain open, or are closed. ² Bridges are functionally obsolete if they have deck geometry, load carrying capacity, clearance or approach alignment that no longer meet the criteria for the system of which the bridge is a part.

No. 1068. National Personal Transportation Survey (NPTS)—Summary of Travel Trends: 1969 to 1995

(87,284 represents 87,284,000,000. Data obtained by collecting information on all trips taken by the respondent on a specific day (known as travel day), combined with longer trips taken over a 2-week period (known as travel period). For compatibility with previous survey data, all data are based only on trips taken during travel day. Be aware that terminology changes from survey to survey. See source for details. 1995 data not comparable with previous years)

No. 1071. Fatal Motor Vehicle Accidents—National Summary: 1990 to 2000

[Based on data from the Fatal Accident Reporting System (FARS). FARS gathers data on accidents that result in loss of human life. FARS is operated and maintained by National Highway Traffic Safety Administration's (NHTSA) National Center for Statistics and Analysis (NCSA). FARS data are gathered on motor vehicle accidents that occurred on a roadway customarily open to the public, resulting in the death of a person within 30 days of the accident. Collection of these data depend on the use of police, hospital, medical examiner/coroner, and Emergency Medical Services reports; State vehicle registration, driver licensing, and highway department files; and vital statistics documents and death certificates. See source for further detail]

this section, for definition of Class I. ² Average midmonth count. ³ Represents the aggregate length of roadway railroads. Excludes yard tracks, sidings, and parallel lines. (Includes estimate for class II and III railroads). ⁴ Excludes main tracks, yard tracks, and sidings owned by both line-haul and switching and terminal. (Includes estimate for III railroads). ⁵ Includes cars owned by all railroads, private car companies, and shippers. ⁶ Class I railroads. ⁷ Includes State income taxes. ⁸ Includes payroll, income, and other taxes. ⁹ Revenue and nonrevenue freight. ¹⁰ Federal Railroad Admin., *Accident Bulletin*, annual. Includes highway grade crossing casualties.

cept as noted, Association of American Railroads, Washington, DC, *Railroad Facts, Statistics of Railroads of . and Analysis of Class I Railroads*, annual.

No. 1090. Railroads, Class I-Cars of Revenue Freight Loaded, 1970 to 2001, and by Commodity Group, 2000 and 2001

[In thousands (27,160 represents 27,160,000). Figures are 52-week totals]

Year	Car-loads ¹	Commodity group	Carloads		Commodity group	Carloads	
			2000 ³	2001, ³ prel.		2000 ³	2001, ³ prel.
1970	27,160	Coal	6,820	6,978	Metals and products	661	593
1980	22,598	Metallic ores	301	228	Stone, clay, and glass products	500	483
1990	16,177	Chemicals, allied products	1,485	1,405	Crushed stone, gravel, sand	841	879
1993	15,911	Grain	1,119	1,117	Nonmetallic minerals	419	380
1994	16,783	Motor vehicles and equipment	1,282	1,200	Waste and scrap materials	466	434
1995	16,783	Pulp, paper, allied products	469	427	Lumber, wood products	275	267
1996	16,521	Primary forest products	246	213	Coke	200	193
1997	16,568	Food and kindred products	428	444	Petroleum products	296	294
1998	16,914	Grain mill products	451	468	All other carloads	296	296
1999	16,407						
2000	16,354						
2001	16,280						

¹ Beginning 1990 excludes intermodal. ² Excludes 2 Class I railroads. ³ Excludes 3 Class I railroads.

Section 24

Information and Communications

This section presents statistics on the various information and communications media: publishing, including newspapers, periodicals, books, and software; motion pictures, sound recordings, broadcasting, and telecommunications; and information services, such as libraries. Statistics on computer use and Internet access are also included. Data on the usage, finances, and operations of the Postal Service previously shown in this section are now presented in Section 23, Transportation.

Information industry—The U.S. Census Bureau's *Service Annual Survey, Information Services Sector*, provides estimates of operating revenue of taxable firms and revenues and expenses of firms exempt from federal taxes for industries in the information sector of the economy. Similar estimates were previously issued in the *Annual Survey of Communications Services*. Data beginning 1998 are based on the North American Industry Classification System (NAICS) and the information sector is a newly created economic sector. It comprises establishments engaged in the following processes: (a) producing and distributing information and cultural products, (b) providing the means to transmit or distribute these products as well as data or communications, and (c) processing data. It includes establishments previously classified in the Standard Industrial Classification (SIC) in manufacturing (publishing); transportation, communications, and utilities (telecommunications and broadcasting); and services (software publishing, motion picture production, data processing, online information services, and libraries).

This new sector is comprised of industries which existed previously, were revised from previous industry definitions, or are completely new industries. Among those which existed previously are newspaper publishers, motion picture and video production, and online information services.

Revised industries include book publishers and libraries and archives. Newly created industries include database and directory publishers, record production, music publishers, sound recording studios, cable networks, wired telecommunications carriers, paging, and satellite telecommunications. The following URL contains detailed information about NAICS and provides a comparison of the SIC and NAICS <<http://www.census.gov/epcd/www/naics.html>>. See also the text in Section 15, Business Enterprise.

The 1997 Economic Census was the first economic census to cover the new information sector of the economy. The census, conducted every 5-years, for the years ending "2" and "7," provides information on the number of establishments, receipts, payroll, and paid employees for the United States and various geographic levels.

The Federal Communications Commission (FCC), established in 1934, regulates wire and radio communications. Only the largest carriers and holding companies file annual financial reports which are publicly available. The FCC has jurisdiction over interstate and foreign communication services but not over intrastate or local services. The gross operating revenues of the telephone carriers reporting publically available data annually to the FCC, however, are estimated to cover about 90 percent of the revenues of all U.S. telephone companies. Data are not comparable with Census Bureau *Annual Survey* because of coverage and different accounting practices for those telephone companies which report to the FCC.

Reports filed by the broadcasting industry cover all radio and television stations operating in the United States. The private radio services represent the largest and most diverse group of licensees regulated by the FCC. These services provide voice, data communications, point-to-point, and point-to-multipoint radio communications

for fixed and mobile communicators. Major users of these services are small businesses, the aviation industry, the maritime trades, the land transportation industry, the manufacturing industry, state and local public safety and governmental authorities, emergency medical service providers, amateur radio operators, and personal radio operations (CB and the General Mobile Radio Service). The FCC also licenses entities as private and common carriers. Private and common carriers provide fixed and land mobile communications service on a for-profit basis. Principal sources of wire, radio, and television data are the FCC's *Annual Report* and its annual *Statistics of Communications Common Carriers*.

Statistics on publishing are available from the Census Bureau, as well as from various private agencies. Editor & Publisher Co., New York, NY, presents annual data on the number and circulation of daily and Sunday newspapers in its *International Year Book*. Data on book production

and prices are available from Information Today, Medford, NJ. The Book Industry Study Group, New York, NY, collects data on books sold and domestic consumer expenditures. Book purchasing data are from Ipsos, NPD, Inc., Rosemont, IL. Data on academic and public libraries are collected by the U.S. National Center for Education Statistics. Public library data are also gathered by Information Today, Medford, NJ, and the National Commission on Libraries and Information Science, Washington, DC.

Advertising—Data on advertising previously shown in this section are now presented in Section 27, Accommodation, Food Services, and Other Services.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

No. 1096. Information Industries—Establishments, Receipts, Payroll, and Employees by Kind of Business (NAICS Basis): 1997

No. 1127. Cellular Telephone Industry: 1990 to 2001

[Calendar year data, except as noted (5,283 represents 5,283,000). Based on a survey mailed to all cellular, personal communications services, and enhanced special mobile radio (ESMR) systems. For 2001 data, the universe was 2,587 systems and the response rate was 87 percent. The number of operational systems beginning 2000 differs from that reported for previous periods as a result of the consolidated operation of ESMR systems in a broader service area instead of by a city-to-city basis.]

¹ The basic geographic unit of a wireless PCS or cellular system. A city or county is divided into smaller "cells," each of which is equipped with a low-powered radio transmitter/receiver. The cells can vary in size depending upon terrain, capacity demands, etc. By controlling the transmission power, the radio frequencies assigned to one cell can be limited to the boundaries of that cell. When a wireless PCS or cellular phone moves from one cell toward another, a computer at the Switching Office monitors the movement and at the proper time, transfers or hands off the phone call to the new cell and another radio frequency. ² Service revenue generated by subscribers' calls outside of their system areas. ³ As of December 31.

Religious	913	839	946	1,015	Outlying areas	113	114	110	(NA)
Law	417	435	647	1,172					
Academic	4,591	5,034	4,593	4,777					

NA Not available. ¹ Includes Canadian libraries, and libraries in regions administered by the United States, not shown separately. Data are exclusive of elementary and secondary school libraries. Law libraries with fewer than 10,000 volumes are included only if they specialize in a particular field. ² Includes other types of special libraries, not shown separately. Increase between 1985 and 1990 is due mainly to revised criteria for identifying special libraries and improved methods of counting. ³ Increase in 2000 due to increased effort in identifying special libraries.

Section 25

Banking, Finance, and Insurance

section presents data on the nation's assets, various types of financial institutions, money and credit, securities, insurance, and real estate. The primary sources of these data are publications of several departments of the federal government, especially the Treasury Department, and independent agencies such as the Federal Deposit Insurance Corporation, the Federal Reserve System, and the Securities and Exchange Commission. National data on insurance are available primarily from trade organizations, such as the American Council of Life Insurers.

Flow of funds—The flow of funds accounts of the Federal Reserve System together with statistics on all the various forms of financial instruments to present an economy-wide view of asset and liability relationships. In flow form, the accounts relate borrowing and lending to one another and to the nonfinancial accounts that generate income and production. Each claim outstanding is recorded simultaneously as an asset of the lender and as a liability of the debtor. The accounts also indicate the balance between asset totals and liability totals for the economy as a whole. Several publications of the Board of Governors of the Federal Reserve System contain information on the flow of funds accounts: primary data on flows and outstandings, in the *Federal Reserve Bulletin*, and *Flow of Funds Accounts of the United States* (quarterly); and concepts and organization of the accounts, in *Guide to the Flow of Funds Accounts* (2000). Data are available at the Board's Web site (<http://www.federalreserve.gov/flowof/funds/>).

Banking system—Banks in this country are organized under the laws of both the states and the federal government and are regulated by several bank supervisory agencies. National banks are supervised by the Comptroller of the Currency. *Reports of Condition* have been collected

from national banks since 1863. Summaries of these reports are published in the Comptroller's *Annual Report*, which also presents data on the structure of the national banking system.

The Federal Reserve System was established in 1913 to exercise central banking functions, some of which are shared with the U.S. Treasury. It includes national banks and such state banks that voluntarily join the system. Statements of state bank members are consolidated by the Board of Governors of the Federal Reserve System with data for national banks collected by the Comptroller of the Currency into totals for all member banks of the system. Balance sheet data for member banks and other commercial banks are published quarterly in the *Federal Reserve Bulletin*. The Federal Deposit Insurance Corporation (FDIC), established in 1933, insures each depositor up to \$100,000. Major item balance sheet and income data for all commercial banks are published in the *FDIC Quarterly Banking Profile*. This publication is also available on the Internet at the following address: <http://www.fdic.gov>. Balance sheet and income data for individual institutions are also available at this site in the Institution Directory (ID) system.

The FDIC is the primary federal regulator of state-chartered banks that are not members of the Federal Reserve System and of most savings banks insured by the Bank Insurance Fund (BIF). The agency also has certain backup supervisory authority, for safety and soundness purposes, over state-chartered banks that are members of the Federal Reserve System, national banks, and savings associations.

Savings institutions—Savings institutions are primarily involved in credit extension in the form of mortgage loans. Statistics on savings institutions are collected by the U.S. Office of Thrift Supervision and the FDIC. The Financial Institutions Reform, Recovery, and Enforcement

Act of 1989 (FIRREA) authorized the establishment of the Resolution Trust Corporation (RTC) which was responsible for the disposal of assets from failed savings institutions. FIRREA gave the FDIC the job of managing the federal deposit insurance fund for savings institutions (SAIF= Savings Association Insurance Fund). Major balance sheet and income data for all insured savings institutions are published in the *FDIC Quarterly Banking Profile*.

Credit unions—Federally chartered credit unions are under the supervision of the National Credit Union Administration. State-chartered credit unions are supervised by the respective state supervisory authorities. The administration publishes comprehensive program and statistical information on all federal and federally insured state credit unions in the *Annual Report of the National Credit Union Administration*. Deposit insurance (up to \$100,000 per account) is provided to members of all federal and those state credit unions that are federally-insured by the National Credit Union Share Insurance Fund which was established in 1970. Deposit insurance for state chartered credit unions is also available in some states under private or state-administered insurance programs.

Other credit agencies—Insurance companies, finance companies dealing primarily in installment sales financing, and personal loan companies represent important sources of funds for the credit market. Statistics on loans, investments, cash, etc., of life insurance companies are published principally by the American Council of Life Insurers in its *Life Insurers Fact Book*. Consumer credit data are published currently in the *Federal Reserve Bulletin*.

Government corporations and credit agencies make available credit of specified types or to specified groups of private borrowers, either by lending directly

or by insuring or guaranteeing loans made by private lending institutions. Data on operations of government credit agencies, along with other government corporations, are available in reports of individual agencies; data on their debt outstanding are published in the *Federal Reserve Bulletin*.

Currency—Currency, including coin and paper money, represents about 46 percent of all media of exchange in the United States, with most payments made by check. All currency is now issued by the Federal Reserve Banks.

Securities—The Securities and Exchange Commission (SEC) was established in 1934 to protect the interests of the public and investors against malpractices in the securities and financial markets and to provide the fullest possible disclosure of information regarding securities to the investing public. Statistical data are published in the *SEC Annual Report*.

Insurance—Insuring companies, which are regulated by the various states or the District of Columbia, are classified as either life or property. Both life and property insurance companies may underwrite health insurance. Insuring companies, other than those classified as life, are permitted to underwrite one or more property lines provided they are so licensed and have the necessary capital or surplus.

There are a number of published sources for statistics on the various classes of insurance—life, health, fire, marine, and casualty. Organizations representing certain classes of insurers publish reports for these classes. The American Council of Life Insurers publishes statistics on life insurance purchases, ownership, benefit payments, and assets in its *Life Insurers Fact Book*.

7. Gross Domestic Product in Finance, Insurance, and Real Estate in Current and Real (1996) Dollars: 1990 to 2000

in dollars, except percent (1,010.3 represents \$1,010,300,000,000). For definition of gross domestic product, see Section 13, Income, Expenditures, and Wealth. Based on 1987 Standard Industrial Classification; see text, Section 15, Business

Industry	Current dollars				Chained (1996) dollars ¹

No. 1154. Claims of U.S. Banking Organizations on Foreign Counterparties by Type of Claim: 2001

[In millions of dollars (881,938 represents \$881,938,000,000). As of December. Adjusted cross-border claims are those booked outside the foreign counterparty's home country, usually at a U.S. bank's head office in the United States, and are adjusted for any guarantees. Cross-border claims are usually denominated in U.S. dollars. Local claims on foreign counterparties are those booked in the local offices of the reporting bank, that is, offices located in the country of the counterparty. These claims are usually, but not always, booked in local currency. Revaluation gains stem from the value of foreign exchange and derivative contracts. U.S. banking organizations continually determine the market value of these contracts - "revaluing" them - to see if a positive or negative value results (based on movements in market factors or other variables)]

Country	Adjusted cross-border claims			Revaluation gains	Country	Adjusted cross-border claims			Revaluation gains
	Total claims	Local claims	Revaluation gains			Total claims	Local claims	Revaluation gains

No. 1155. Retail Fees and Services of Depository Institutions: 2000 and 2001

[In dollars, except as noted. As of June. For most services, fees are reported in terms of (1) the proportion of those institutions offering a service that charge for the service and (2) the average fee charged by the institutions that charge for the service. Based on a random sample of depository institutions belonging to the Bank Insurance Fund, whose members are predominantly commercial banks, or the Savings Association Insurance Fund, whose members are predominantly savings and loans associations]

Type of account or service	2000	2001	Type of account or service	2000	2001
NONINTEREST CHECKING ACCOUNT			AUTOMATED TELLER MACHINES (ATMs)		
Percent offering	95.4	96.7	Percent offering	88.8	90.9
Single-balance, single-fee account: ¹			Annual fee:		
Percent offering	37.4	29.6	Percent charging	13.1	10.7
Monthly fee (low balance)	7.19	7.12	Average	10.79	10.35
Minimum balance to avoid fee	485	527	Fees for customer withdrawals on us: ⁴		
Fee-only account: ²			Percent charging	6.2	3.6
Percent offering	40.2	37.7	Average	0.71	0.81
Monthly fee	5.16	4.74	Fees for customer withdrawals on others: ⁴		
NOW ACCOUNTS ³			Percent charging	72.7	78.5
Percent offering	94.4	96.2	Average	1.16	1.17
Single-fee account: ¹			Surcharge: ⁵		
Percent offering	47.0	49.5	Percent charging	75.4	88.5
Monthly fee (low balance)	8.49	8.15	Average	1.26	1.32
Minimum balance to avoid fee	1,029	1,132			

¹ A monthly fee for balances below the minimum, no monthly fee for balances above the minimum, and no other charges

² A monthly fee, no minimum balance to eliminate the fee, and a charge per check in some cases. ³ NOW (negotiable order of withdrawal) accounts are checking accounts that pay interest and often have fee structures that differ from those of noninterest checking accounts. ⁴ An institution's "customer" is one who has an account at the institution. A customer's ATM transactions in which the machine used is that of the customer's institution are called "on us"; a customer's transactions in which the machine used is that of another institution are called "on others." ⁵ An ATM surcharge is a fee imposed by the ATM's institution, typically on every transaction by the machine's noncustomer users.

Remote payments ⁷	-	0.8	3.1	-	0.6	2	75	355	0.1	1.4

- Represents or rounds to zero. ¹ Excludes consumer check repayments and prepayments involving other payment systems as well as all commercial and government checks. ² Official checks include cashier's checks, teller checks, and certified checks purchased from financial institutions. Excludes those purchased by businesses. ³ Credit cards include general purpose cards usable at all kinds of merchants and proprietary cards usable only at selected outlets. Includes some purchases on personal cards for government, commercial, and business-related spending. Cash advances are excluded. ⁴ Debit cards include general purpose cards carrying the Visa or MasterCard brand, electronic funds transfer (EFT) brands of regional EFT systems, proprietary commercial cards issued by private firms to drivers in the long-haul trucking and business aviation industry, and proprietary consumer cards issued by supermarkets. Cash withdrawals at ATMs and cash back over the counter are excluded. ⁵ Stored value cards are used primarily for gift certificates and telephone calls. ⁶ Electronic benefits transfer cards are replacements for paper scrip food stamps. ⁷ Preauthorized payments are handled electronically "end-to-end" through an automated clearing house. ⁸ Remote payments are made using a telephone or a computer and include point-of-sale check conversions and utility-bill payments made at ATMs, self-service clerk-assisted electronic banking machines kiosks and clerk-assisted machines at supermarkets.

No. 1175. Purchases and Sales by U.S. Investors of Foreign Bonds and Stocks, 1990 to 2001, and by Selected Country, 2001

[In billions of dollars (31.2 represents \$31,200,000,000). Covers transactions in all types of long-term foreign securities as reported by banks, brokers, and other entities in the United States. Data cover new issues of securities, transactions in outstanding issues, and redemptions of securities. Includes transactions executed in the United States for the account of foreigners, and transactions executed abroad for the account of reporting institutions and their domestic customers. Data by country show the country of domicile of the foreign buyers and sellers of the securities; in the case of outstanding issues, this may differ from the country of the original issuer. The term "foreigner" covers all institutions and individuals domiciled outside the United States, including U.S. citizens domiciled abroad, and the foreign branches, subsidiaries and other affiliates abroad of U.S. banks and businesses; the central governments, central banks, and other official institutions of foreign countries; and international and regional organizations. "Foreigner" also includes persons in the United States to the extent that they are known by reporting institutions to be acting on behalf of foreigners. Minus sign (-) indicates net sales by U.S. investors or a net inflow of capital into the United States]

No. 1192. Mutual Fund Retirement Assets: 1990 to 2001

[In billions of dollars, except percent (207 represents \$207,000,000,000). Based on data from the Institute's Annual Questionnaire for Retirement Statistics. The 2001 survey gathered data from 11,783 mutual fund share classes representing approximately 81 percent of mutual fund industry assets. Assets were estimated for all nonreporting funds. Estimates of retirement assets in street name and omnibus accounts were derived from data reported on the Annual Questionnaire for Retirement Statistics and the Annual Institutional Survey]

Type of account	1990	1996	1996	1997	1999	1999	2000	2001
Mutual fund retirement assets	207	916	1,189	1,527	1,924	2,500	2,445	2,311

¹ Based on the HO-4 renters insurance policy for tenants. Includes broad named-peril coverage for the personal property of tenants. ² Based on the HO-3 homeowner package policy for owner-occupied dwellings, 1-4 family units. Provides "all risks" coverage (except those specifically excluded in the policy) on buildings, broad named-peril coverage on personal property, and is the most common package written. ³ The Texas Insurance Commissioner promulgated residential policy forms which are similar but not identical to the standard forms. Insurers can use State-promulgated or standard forms.

Arts, Entertainment, and Recreation

section presents data on the arts, entertainment, and recreation economic sector of the economy, and personal recreational activities, the arts and human and domestic and foreign travel.

Entertainment, and Recreation Industry—The U.S. Census Bureau's *Service Annual Survey, Arts, Entertainment, and Recreation Sector*, provides estimates of generation revenue of taxable firms and revenues and expenses of firms exempt from federal taxes for industries in this sector of the economy. Data beginning in 1997 are based on the North American Industry Classification System (NAICS). Establishments were previously classified in the Standard Industrial Classification (SIC) in services, some in retail trade.

The new sector is comprised of industries that either existed previously, were revised from previous industry definitions, or are completely new industries. Among those that existed previously are amusement and theme parks. Revised industries include museums. New industries include internet companies and dinner theaters. The following URL contains detailed information about NAICS and provides a comparison of the SIC and NAICS: <http://www.census.gov/epcd/www/sicnaics.html>. See also the text in Section 23, Business Enterprise.

The 1997 Economic Census was the first economic census to cover the new Information Sector of the economy. The Census is conducted every 5-years, for the years ending "2" and "7," provides information on the number of establishments, assets, payroll and paid employees for the U.S. and various geographic levels.

Arts and Leisure activities—Data on the participation in various recreation and leisure time activities are based on several sample surveys. Data on participation in fishing, hunting, and other types of wildlife-associated recreation are

published periodically by the U.S. Department of Interior, Fish and Wildlife Service. The most recent data are from the 2001 survey. Data on participation in various sports recreation activities are published by the National Sporting Goods Association. Mediamark, Inc. also conducts periodic surveys on sports and leisure activities, as well as other topics.

Parks and recreation—The Department of the Interior has responsibility for administering the national parks. The National Park Service publishes information on visits to national park areas in its annual report, *National Park Statistical Abstract. The National Parks: Index (year)* is a biannual report which contains brief descriptions, with acreages, of each area administered by the service, plus certain "related" areas. The annual *Federal Recreation Fee Report* summarizes the prior year's recreation fee receipts and recreation visitation statistics for seven federal land managing agencies. Statistics for state parks are compiled by the National Association of State Park Directors which issues its *Annual Information Exchange*.

Travel—Statistics on arrivals to the United States are reported by the International Trade Administration (ITA). Statistics on departures from the United States include the Department of Transportation's *International Air Travel Statistics* and other sources. Data on domestic travel, business receipts and employment of the travel industry, and travel expenditures are published by the U.S. Travel Data Center, which is the research department of the Travel Industry Association and the national nonprofit center for travel and tourism research located in Washington, DC. Other data on household transportation characteristics are in Section 23, Transportation.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

No. 1208. Arts, Entertainment, and Recreation—Establishments, Receipts, Payroll, and Employees by Kind of Business (NAICS Basis): 1997

[For establishments with payroll (85,088 represents \$85,088,000,000). Based on the 1997 Economic Census; see Appendix III]

X Not applicable. ¹ Includes other funds, shown separately. Excludes administrative funds. Gifts are included in 1980; excluded thereafter. ² Represents federal funds obligated only upon receipt or certification by Endowment of matching nonfederal gifts. ³ Includes obligations for new grants, supplemental awards on previous years' grants, and program contracts. ⁴ Beginning with 1997 data, the grantmaking structure changed from discipline-based categories to thematic ones. ⁵ Program designed to stimulate new sources and higher levels of giving to institutions for the purpose of guaranteeing long-term stability and financial independence. Program usually requires a match of at least 3 private dollars to each federal dollar. Funds for challenge grants are not allocated by program area because they are awarded on a grant-by-grant basis.

Parks	46,089	48,111	49,307	49,315	49,384	49,416	49,859	49,785
Recreation areas	3,344	3,351	3,353	3,353	3,329	3,361	3,404	3,388
Other	26,929	23,443	24,695	24,790	24,744	24,877	24,903	24,980
Acquisition, net.	21	32	27	98	61	95	44	222

¹ Financial data are those associated with the National Park System. Certain other functions of the National Park Service (principally the activities absorbed from the former Heritage Conservation and Recreation Service in 1981) are excluded. ² Includes funds carried over from prior years. ³ For calendar year. Includes other areas, not shown separately. ⁴ For 1990, combined data for North Cascades National Park and two adjacent National Recreation Areas are included in National Parks total. ⁵ Includes military areas. ⁶ Federal land only, as of Dec. 31. Federal land acreages, in addition to National Park Service administered lands, also include lands within national park system area boundaries but under the administration of other agencies. Year-to-year changes in the federal lands figures include changes in the acreages of these other lands and hence often differ from "net acquisition."

Source: U.S. National Park Service, Visits, *National Park Statistical Abstract*, annual; and unpublished data. Other data are unpublished.

No. 1235. State Parks and Recreation Areas by State: 2001

[For year ending June 30 (13,030 represents 13,030,000). Data are shown as reported by state park directors. In some states, park agency has under its control forests, fish and wildlife areas, and/or other areas. In other states, agency is responsible for state parks only]

Accommodation, Food Services, and Other Services

Section 27 presents statistics relating to services other than those covered in the previous few sections (22 to 26) on agriculture, mining, construction, retail trade, transportation, communications, financial services, and recreation services. Data shown for the services are classified by kind of business and cover output, receipts, establishments, employment, payrolls, and other items. The principal sources of these data are from the Census Bureau and include the 1997 *Economic Census* reports, annual surveys, and the *County Business Patterns* program. These data are supplemented by information from several sources such as the National Restaurant Association on food and drink sales (Table 1250), the American Hotel & Motel Association on lodging (Table 1248), and McCann-Erickson, Inc. Publishers Information Bureau on advertising (Tables 1253 and 1254, respectively).

Statistics on these services also appear in several other sections. For instance, labor force, employment and earnings data (Table 603) appear in Section 12, Labor force, gross domestic product of the economy (Table 632) appear in Section 13, Expenditures, and Wealth; and statistical data (several tables) from the *Early Statistics of Income Bulletin*, published by the Internal Revenue Service, appear in Section 15, Business Enterprise.

Uses—Limited coverage of the services industries started in 1933. Beginning with the 1967 census, legislation requires for a census of each area to be conducted every 5 years (for years ending in “2” and “7”). For more information on the most current census, see the *History of the 1997 Economic Census* found at <http://www.census.gov/prod/ec97/97-hec.pdf>. The industries covered in the censuses and surveys of business are classified in 13 sectors defined in the *North American Industry Classification System*, called NAICS (see below). All Census Bureau tables in this section are

utilizing the new NAICS codes, which replaced the Standard Industrial Classification (SIC) system. NAICS makes substantial structural improvements and identifies over 350 new industries. At the same time, it causes breaks in time series far more profound than any prior revision of the previously used SIC system. For information on this system and how it affects the comparability of statistics historically, see text, Section 15, Business Enterprise, and especially the Census Web site at <http://www.census.gov/epcd/www/naics.html>.

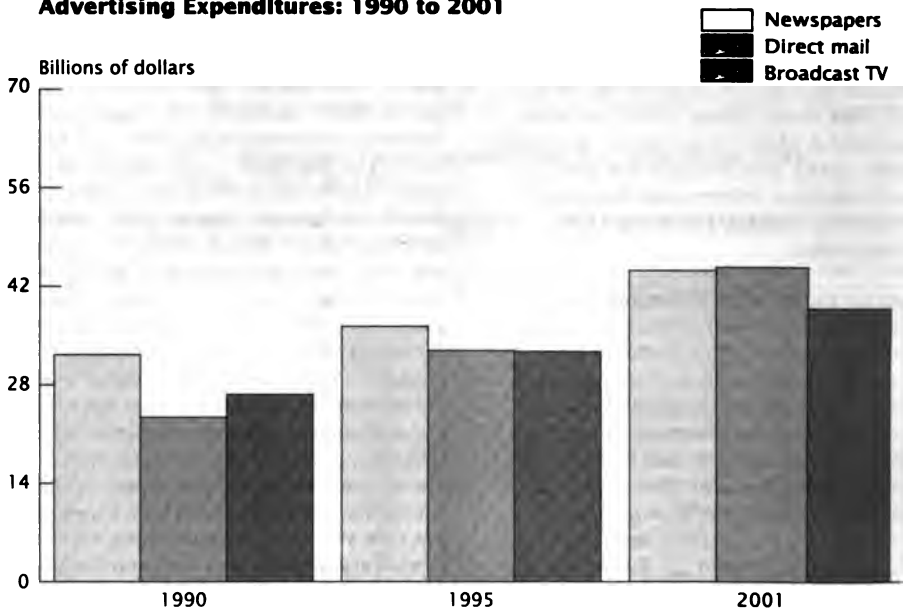

The *Accommodation and Food Services sector* (NAICS sector 72) comprises establishments providing customers with lodging and/or prepared meals, snacks, and beverages for immediate consumption. The *Other Services (Except Public Administration) sector* (NAICS sector 81) covers establishments with payroll engaged in providing services not specifically provided for elsewhere in the NAICS. Establishments in this sector are primarily engaged in activities such as repair and maintenance of equipment and machinery, personal and laundry services, and religious, grantmaking, civic, professional, and similar organizations. Establishments providing death care services, pet care services, photofinishing services, temporary parking services, and dating services are also included. Private households that employ workers on or about the premises in activities primarily concerned with the operation of the household are included in this sector but are not included in the scope of the census. In general, the 1997 Economic Census has two series of publications and documents for these two sectors: 1) subject series with reports on such as commodity line sales and establishment and firm sizes and 2) geographic reports with individual reports for each state. For information on these series, see the Census Web site at <http://www.census.gov/epcd/www/97EC72.htm> and <http://www.census.gov/epcd/www/97EC81.htm>.

Current surveys—The Service Annual Survey provides annual estimates of nationwide receipts for selected personal, business, leasing and repair, amusement and entertainment, social and health, and other professional service industries in the United States. For selected accommodation, social, health, and other professional service industries, separate estimates are developed for receipts of taxable firms and revenue and expenses for firms and organizations exempt from federal income taxes. Several service sectors from this survey are covered in other sections of this publication. The estimates for tax exempt firms in these industries

are derived from a sample of employer firms only. Estimates obtained from annual and monthly surveys are based on sample data and are not expected to agree exactly with results that would be obtained from a complete census of all establishments. Data include estimates for sampling units not reporting.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Section 28

Foreign Commerce and Aid

ection presents data on the flow of , services, and capital between the l States and other countries; es in official reserve assets of the l States; international investments; reign assistance programs.

ureau of Economic Analysis pub- current figures on U.S. international ctions and the U.S. international ment position in its monthly *Survey rent Business*. Statistics for the oid programs are presented by the y for International Development n its annual *U.S. Overseas Loans rants and Assistance from Interna- Organizations* and by the Depart- of Agriculture in its *Foreign Agricul- Trade of the United States*.

incipal source of merchandise t and export data is the U.S. Census . Current data are presented ily in *U.S. International Trade in and Services* report Series FT 900. *Guide to Foreign Trade Statistics* on the Census Bureau Web site at //www.census.gov/foreign-trade/ 'index.html' lists the Bureau's ily and annual products and serv- this field. In addition, the Interna- Trade Administration and the Bureau of Economic Analysis present sum- as well as selected commodity and y data for U.S. foreign trade in the *Foreign Trade Highlights* and the *Review of Current Business*, respectively. erchandise trade data in the latter : include balance of payments ments to the Census Bureau data. easury Department's *Monthly Trea- tement of Receipts and Outlays United States Government* contains ation on import duties.

International accounts—The interna- transactions tables (Nos. 1262 to show, for given time periods, the er of goods, services, grants, and ial assets and liabilities between the States and the rest of the world.

The international investment position table (No. 1265) presents, for specific dates, the value of U.S. investments abroad and of foreign investments in the United States. The movement of foreign and U.S. capital as presented in the balance of payments is not the only factor affecting the total value of foreign invest- ments. Among the other factors are changes in the valuation of assets or liabilities, including changes in prices of securities, defaults, expropriations, and write-offs.

Direct investment abroad means the own- ership or control, directly or indirectly, by one person of 10 percent or more of the voting securities of an incorporated busi- ness enterprise or an equivalent interest in an unincorporated business enterprise. Direct investment position is the value of U.S. parents' claims on the equity of and receivables due from foreign affiliates, less foreign affiliates' receivables due from their U.S. parent's. Income consists of par- ents' shares in the earnings of their affil- iates' plus net interest received by parents' on intercompany accounts, less withhold- ing taxes on dividends and interest.

Foreign aid—Foreign assistance is divided into three major categories— grants (military supplies and services and other grants), credits, and other assis- tance (through net accumulation of fore- ign currency claims from the sale of agri- cultural commodities). *Grants* are transfers for which no payment is expected (other than a limited percentage of the foreign currency "counterpart" funds generated by the grant), or which at most involve an obligation on the part of the receiver to extend aid to the United States or other countries to achieve a common objective. *Credits* are loan dis- bursements or transfers under other agreements which give rise to specific obligations to repay, over a period of years, usually with interest. All known returns to the U.S. government stemming from grants and credits (reverse grants,

returns of grants, and payments of principal) are taken into account in net grants and net credits, but no allowance is made for interest or commissions. *Other assistance* represents the transfer of U.S. farm products in exchange for foreign currencies (plus, since enactment of Public Law 87-128, currency claims from principal and interest collected on credits extended under the farm products program), less the government's disbursements of the currencies as grants, credits, or for purchases. The net acquisition of currencies represents net transfers of resources to foreign countries under the agricultural programs, in addition to those classified as grants or credits.

The basic instrument for extending military aid to friendly nations has been the Mutual Defense Assistance Program authorized by the Congress in 1949. Prior to 1952, economic and technical aid was authorized in the Foreign Assistance Act of 1948, the 1950 Act for International Development, and other legislation which set up programs for specific countries. In 1952, these economic, technical, and military aid programs were combined under the Mutual Security Act, which in turn was followed by the Foreign Assistance Act passed in 1961. Appropriations to provide military assistance were also made in the Department of Defense Appropriation Act (rather than the Foreign Assistance Appropriation Act) beginning in 1966 for certain countries in Southeast Asia and in other legislation concerning program for specific countries (such as Israel). Figures on activity under the Foreign Assistance Act as reported in the *Foreign Grants and Credits* series differ from data published by AID or its immediate predecessors, due largely to differences in reporting, timing, and treatment of particular items.

Exports—The Census Bureau compiles export data primarily from Shipper's Export Declarations required to be filed with customs officials for shipments leaving the United States. They include U.S. exports under mutual security programs and exclude shipments to U.S. Armed Forces for their own use.

The value reported in the export statistics is generally equivalent to a free alongside ship (*f.a.s.*) value at the U.S. port of

export, based on the transaction price, including inland freight, insurance, and other charges incurred in placing the merchandise alongside the carrier at the U.S. port of exportation. This value, as defined, excludes the cost of loading merchandise aboard the exporting carrier and also excludes freight, insurance, and any other charges or transportation and other costs beyond the U.S. port of exportation. The country of destination is defined as the country of ultimate destination or country where the merchandise is to be consumed, further processed, or manufactured, as known to the shipper at the time of exportation. When ultimate destination is not known, the shipment is statistically credited to the last country to which the shipper knows the merchandise will be shipped in the same form as exported.

Effective January 1990, the United States began substituting Canadian import statistics for U.S. exports to Canada. As a result of the data exchange between the United States and Canada, the United States has adopted the Canadian import exemption level for its export statistics based on shipments to Canada.

Data are estimated for shipments valued under \$2,501 to all countries, except Canada, using factors based on the ratios of low-valued shipments to individual country totals.

Prior to 1989, exports were based on Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States. These statistics were retabulated and published using Schedule E, Standard International Trade Classification, Revision 2. Beginning in 1989, Schedule B classifications were based on the Harmonized System and made to coincide with the Standard International Trade Classification, Revision 3. This revision will affect the comparability of most export series beginning with the 1989 data for commodities.

Imports—The Census Bureau compiles import data from various customs forms required to be filed with customs officials. Data on import values are presented on two valuation bases in this section: The *c.i.f.* (cost, insurance, and freight) and the

oms import value (as appraised by U.S. Customs Service in accordance legal requirements of the Tariff Act 130, as amended). This latter value—primarily used for collection of port duties, frequently does not reflect actual transaction value. Country of origin is defined as country where the handise was grown, mined, or manufactured. If country of origin is unknown, country of shipment is reported.

Imports are classified either as "General Imports" or "Imports for consumption." *General imports* are a combination of entries for immediate consumption, entries into customs bonded warehouses, entries into U.S. Foreign Trade Zones, generally reflecting total arrivals of handise. *Imports for consumption* are a combination of entries for immediate consumption, withdrawals from warehouses for consumption, and entries of handise into U.S. customs territory and U.S. Foreign Trade Zones, thus generally reflecting the total of the commodities entered into U.S. consumption chan-

From 1989, imports were based on the Harmonized Schedule of the United States Annotated. The statistics were retabulated and

published using Schedule A, Standard International Trade Classification, Revision 2. Beginning in 1989, the statistics are based on the Harmonized Tariff Schedule of the United States, which coincides with the Standard International Trade Classification, Revision 3. This revision will affect the comparability of most import series beginning with the 1989 data.

Area coverage—Except as noted, the geographic area covered by the export and import trade statistics is the United States Customs area (includes the 50 states, the District of Columbia, and Puerto Rico), the U.S. Virgin Islands (effective January 1981), and U.S. Foreign Trade Zones (effective July 1982). Data for selected tables and total values for 1980 have been revised to reflect the U.S. Virgin Islands' trade with foreign countries, where possible.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

¹ Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments for valuation, coverage, and timing) of Census statistics to balance of payments basis. ² Includes some goods. Mainly military equipment included in "Transfers under U.S. military agency sales contracts", major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies included in "Direct defense expenditures" under "Imports", and fuels purchased by airline and steamship operators included in "Other transportation" under "Exports" and "Imports". These lines are presented on a gross basis. Exports exclude U.S. military grant programs, foreign affiliates and to include U.S. affiliates' receipts from foreign parents. Imports include U.S. affiliates' payments to foreign parents. The "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. government. At the present time all U.S. Treasury-owned gold is held in the United States. ³ Includes sales of foreign obligations to foreigners. ⁴ Conceptually, "Balance on current account" is equal to "net foreign investment" in the national income and product account (NIP4); however, the foreign transactions account in the NIP4 (a) includes adjustments for the treatment of gold, (b) includes adjustments for the different statistical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private nonrenewed pension plans.

No. 1270. U.S. Businesses Acquired or Established by Foreign Direct Investors— Investment Outlays by Industry of U.S. Business Enterprise and Country of Ultimate Beneficial Owner: 1990 to 2000

[In millions of dollars (65,932 represents \$65,932,000,000). Foreign direct investment is the ownership or control directly or indirectly, by one foreign individual branch, partnership, association, trust, corporation, or government of 10 percent or more of the voting securities of a U.S. business enterprise or an equivalent interest in an unincorporated one. Data represent number and full cost of acquisitions of existing U.S. business enterprises, including business segments or operating units of existing U.S. business enterprises and establishments of new enterprises. Investments may be made by the foreign direct investor itself, or indirectly by an existing U.S. affiliate of the foreign direct investor. Covers investments in U.S. business enterprises with assets of over \$1 million, or ownership of 200 acres of U.S. land. These industry data are now on a North American Industry Classification System (NAICS) basis and not comparable to previous data, which were based on the Standard Industrial Classification system]

No. 1272. U.S. Direct Investment Position Abroad on a Historical-Cost Basis by Country: 1990 to 2000

[In millions of dollars (430,521 represents 430,521,000,000). U.S. direct investment abroad is the ownership or control by one U.S. person of 10 percent or more of the voting securities of an incorporated foreign business enterprise or an equivalent interest in a unincorporated foreign business enterprise. Negative position can occur when a U.S. parent company's liabilities to the foreign affiliate are greater than its equity in, and loans to the foreign affiliate.]

- Represents zero or rounds to zero. X Not applicable. Z Less than \$500,000. ¹ In 1992, some successor countries assumed portions of outstanding credits of the former Yugoslavia (assignment of the remaining portions is pending). Subsequent negative totals reflect payments to the United States on these assumed credits which were greater than the extension of new credits and grants to these countries. ² Includes European Atomic Energy Community, European Coal and Steel Community, European Payments Union, European Productivity Agency, North Atlantic Treaty Organization, and Organization for European Economic Cooperation. ³ In recent years, significant amounts of foreign assistance has been reported on a regional, inter-regional, and worldwide basis. Country totals in this table may understate actual assistance to many countries. ⁴ Foreign assistance to Iraq in 1994-96 was direct humanitarian assistance to ethnic minorities of Northern Iraq after the conflict in the Persian Gulf. ⁵ United Nations Relief and Works Agency for Palestine refugees. ⁶ Excludes transactions with Commonwealth of the Northern Mariana Islands after October 1986; includes transactions with Federated States of Micronesia, Republic of the Marshall Islands, and Republic of Palau. ⁷ Includes transfer of Panama Canal to the Republic of Panama on December 1999. ⁸ Includes Andean Development Corporation, Caribbean Development Bank, Central American Bank for Economic Integration, Eastern Caribbean Central Bank, Inter-American Institute of Agricultural Science, Organizations of American States, and Pan American Health Organization.

Source: U.S. Bureau of Economic Analysis, press releases, and unpublished data.

No. 1274. U.S. Foreign Economic and Military Aid Programs: 1980 to 2000

[In millions of dollars (9,695 represents \$9,695,000,000). For years ending September 30. Economic aid shown here represents U.S. economic aid—not just aid under the Foreign Assistance Act. Major components in recent years include AID, Food for Peace, Peace Corps, and paid-in subscriptions to international financial institutions, such as IBRD, and IDB. Annual figures are gross unadjusted program figures]

Year and region	Total economic and military aid	Economic aid			Military aid

¹ Includes nonmonetary gold, military grant aid, special category shipments, trade between the U.S. Virgin Islands and foreign countries and undocumented exports to Canada. Adjustments were also made for carryover. Import values are based on transaction prices whenever possible (f.a.s. for 1974-1979 and Customs value thereafter). Import data before 1974 do not exist on a transaction price valuation basis. ² Manufactured goods include commodity Sections 5-9 under Schedules A and E for 1970-1982 and SITC Rev. 3 for 1983-forward. Manufactures include undocumented exports to Canada, nonmonetary gold (excluding gold ore, scrap, and base bullion), and special category shipments. ³ Data for 1970-1980 exclude trade between the U.S. Virgin Islands and foreign countries. Census data concordances link the 1980-92 trade figures into time series that are as consistent as possible. Data for 1970-79 are not linked and are from published sources. Import values are f.a.s. for 1974-1979 and Customs value thereafter; these values are based on transaction prices while maintaining a data series as consistent as possible over time. Import data before 1974 do not exist on a transaction price valuation basis. ⁴ Agricultural products for 1983-forward utilize the latest census definition that excludes manufactured goods that were previously classified as manufactured agricultural products. ⁵ Mineral fuels include commodity Section 3 under SITC Rev. 1 for 1970-1976, SITC Rev. 2 for 1977-1982 and SITC Rev. 3 for 1983-forward.

Z Less than \$50 million. ¹ Totals shown for exports reflect the value of estimated parcel post and Special Category shipments, and beginning 1990, adjustments for undocumented exports to Canada which are not distributed by customs district. The value of bituminous coal exported through Norfolk, VA; Charleston, SC; and Mobile, AL is reflected in the total but not distributed by district. ² Excludes exports of bituminous coal, which are included in the "Total" line.

No. 1272. U.S. Direct Investment Position Abroad on a Historical-Cost Basis by Country: 1990 to 2000

[In millions of dollars (430,521 represents 430,521,000,000). U.S. direct investment abroad is the ownership or control by one U.S. person of 10 percent or more of the voting securities of an incorporated foreign business enterprise or an equivalent in a unincorporated foreign business enterprise. Negative position can occur when a U.S. parent company's liabilities to its foreign affiliate are greater than its equity in, and loans to the foreign affiliate.]

Section 29

Outlying Areas

ection presents summary economic and social statistics for Puerto Rico, Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands. Primary sources are the decennial censuses of population, housing and the censuses of agriculture, business, manufactures, and commerce (taken every 5 years) conducted by the U.S. Census Bureau; the annual *Statistics of the United States*, issued by the National Center for Health Statistics; and the annual *Income and Product Accounts* for Puerto Rico Planning Board, San

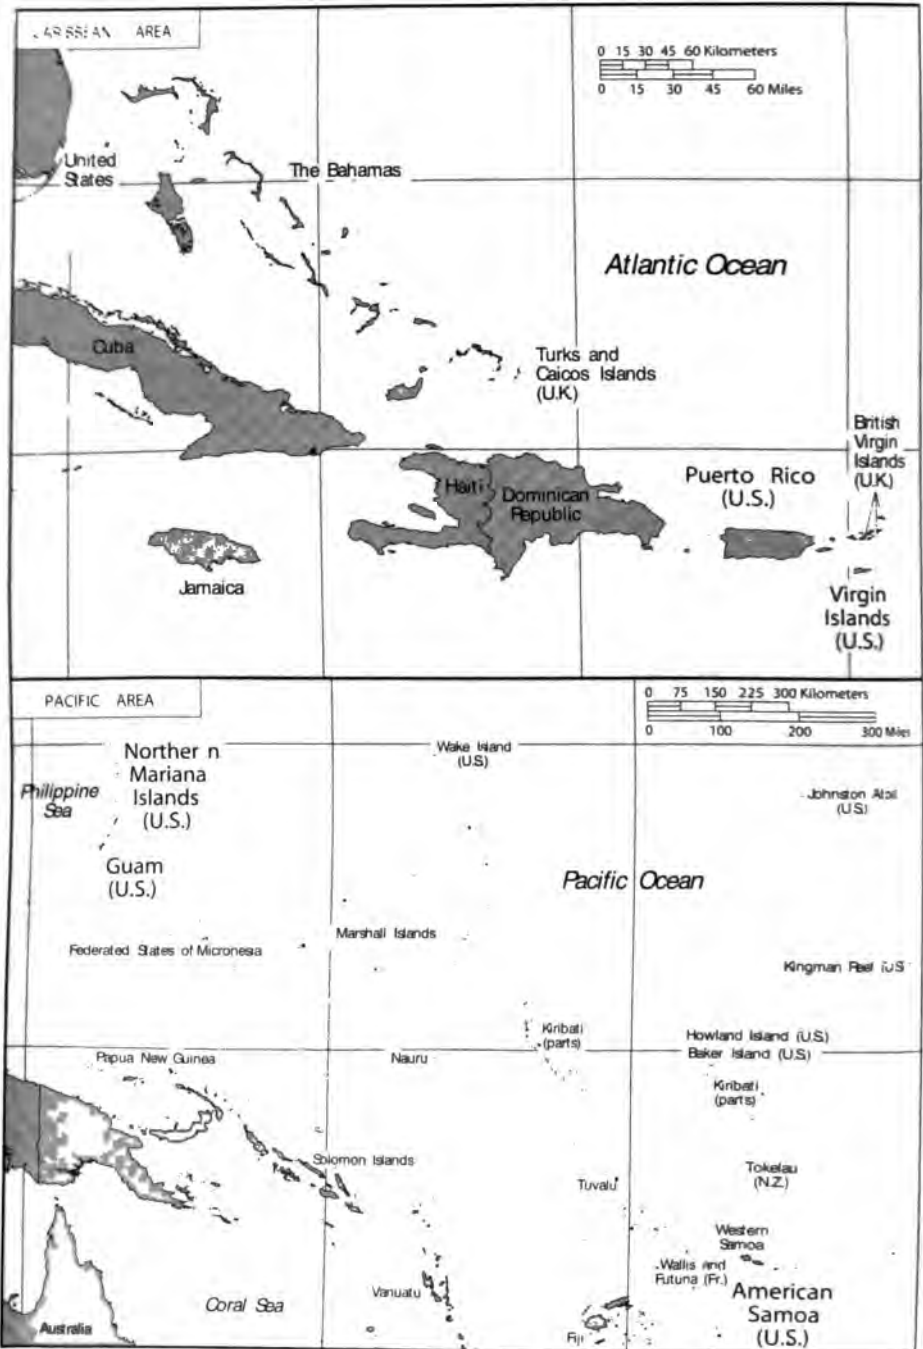

Acquisition—The United States gained jurisdiction over these areas as follows: the islands of *Puerto Rico* and *Guam*, surrendered by Spain to the United States in 1898, were ceded to the United States by the Treaty of Paris, ratified in 1899. Puerto Rico became a commonwealth on July 25, 1952, thereby achieving a high degree of local autonomy under its own constitution. The *Virgin Islands*, comprising 50 islands and cays, purchased by the United States from Denmark in 1917. *American Samoa*, a group of seven islands, was acquired by the United States in accordance with a treaty among the United States, Great Britain, and Germany, ratified in 1899. Swains Island was annexed in 1909. By an agreement approved by the Security Council and the United States, the Northern Mariana Islands, previously under a Japanese mandate, was administered by the United States between 1947 and 1986 under the United Nations trusteeship system. The Northern Mariana Islands became a commonwealth in 1986.

Statistics—Because characteristics of the outlying areas differ, the presentation of data for them is not uniform. The

1960 Census of Population covered all of the places listed above except the Northern Mariana Islands (their census was conducted in April 1958 by the Office of the High Commissioner), while the 1960 Census of Housing also excluded American Samoa. The 1970, 1980, and 1990 Censuses of Population and Housing covered all five areas. The 1959, 1969, and 1978 Censuses of Agriculture covered Puerto Rico, American Samoa, Guam, and the Virgin Islands; the 1964, 1974, and 1982 censuses covered the same areas except American Samoa; and the 1969, 1978, 1987, 1992, and 1997 censuses included the Northern Mariana Islands. Beginning in 1967, Congress authorized the economic censuses, to be taken at 5-year intervals, for years ending in "2" and "7." Prior economic censuses were conducted in Puerto Rico for 1949, 1954, 1958, and 1963 and in Guam and the Virgin Islands for 1958 and 1963. In 1967, the census of construction industries was added for the first time in Puerto Rico; in 1972, Virgin Islands and Guam were covered. For 1982, 1987, 1992, and 1997 the economic censuses covered the Northern Mariana Islands.

Information in other sections—In addition to the statistics presented in this section, other data are included as integral parts of many tables showing distribution by states in various sections of the *Abstract*. See "Outlying areas of the United States" in the Index. For definition and explanation of terms used, see Section 1, Population; Section 4, Education; Section 17, Agriculture; Section 20, Construction and Housing; Section 21, Manufactures; and Section 22, Domestic Trade.

Section 30

Comparative International Statistics

This section presents statistics for the world as a whole and for many countries on a comparative basis with the United States. Data are shown for population, births and deaths, social and industrial indicators, finances, agriculture, communication, and military affairs.

Statistics of the individual nations may be found primarily in official national publications, generally in the form of yearbooks, issued by most of the nations at various intervals in their own national languages and expressed in their own or customary units of measure. (For a listing of selected publications, see Guide to Sources.) For handier reference, especially for international comparisons, the United Nations Statistics Division compiles data as submitted by member countries and issues a number of international summary publications, generally in English and French. Among these are the *Statistical Yearbook*; the *Demographic Yearbook*; *International Trade Statistics Yearbook*; *National Accounts Statistics: Main Aggregates and Detailed Tables*; *Population and Vital Statistics Reports* (quarterly); the *Monthly Bulletin of Statistics*; and the *Energy Statistics Yearbook*. Specialized agencies of the United Nations also issue international summary publications on agricultural, labor, health, and education statistics. Among these are the *Production Yearbook* and *Trade Yearbook* issued by the Food and Agriculture Organization, the *Yearbook of Labour Statistics* issued by the International Labour Office, *World Health Statistics* issued by the World Health Organization, and the *Statistical Yearbook* issued by the Educational, Scientific, and Cultural Organization.

The U.S. Census Bureau presents estimates and projections of basic demographic measures for countries and regions of the world in the *World Population Reports* (WP) series. The *International Population Reports* (Series IPC), and *International Briefs* (Series IB) also present population figures for many foreign

countries. Detailed population statistics are also available from the Census Bureau's International Data Base (<http://www.census.gov/ipc/www/idbnew.html>).

The International Monetary Fund (IMF) and the Organization for Economic Cooperation and Development (OECD) also compile data on international statistics. The IMF publishes a series of reports relating to financial data. These include *International Financial Statistics*, *Direction of Trade*, and *Balance of Payments Yearbook*, published in English, French, and Spanish. The OECD publishes a vast number of statistical publications in various fields such as economics, health, and education. Among these are *OECD in Figures*, *Main Economic Indicators*, *Economic Outlook*, *National Accounts*, *Labour Force Statistics*, *OECD Health Data*, and *Education at a Glance*.

Statistical coverage, country names, and classifications—Problems of space and availability of data limit the number of countries and the extent of statistical coverage shown. The list of countries included and the spelling of country names are based almost entirely on the list of sovereign nations, dependencies, and areas of special sovereignty provided by the U.S. Department of State.

In recent years, several important changes took place in the status of the world's nations. In 1990, a unified Germany was formed from the Federal Republic of Germany (West) and the German Democratic Republic (East). The Republic of Yemen was formed by union of the Yemen Arab Republic and the People's Democratic Republic of Yemen. Also in 1990, Namibia, once a United Nations mandate, realized its independence from South Africa.

In 1991, the Soviet Union broke up into 15 independent countries: Armenia, Azerbaijan, Belarus, Estonia, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania,

Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan.

Following the breakup of the Socialist Federal Republic of Yugoslavia in 1992, the United States recognized Bosnia and Herzegovina, Croatia, Slovenia, and The Former Yugoslav Republic of Macedonia as independent countries.

On January 1, 1993, Czechoslovakia was succeeded by two independent countries: the Czech Republic and Slovakia. Eritrea announced its independence from Ethiopia in April 1993 and was subsequently recognized as an independent nation by the United States.

The population estimates and projections used in Tables 1305, 1306, 1308, 1309, and 1312 were prepared by the Census Bureau. For each country, the data on population, by age and sex, fertility, mortality, and international migration were evaluated and, where necessary, adjusted for inconsistencies and errors in the data. In most instances, comprehensive projections were made by the component method, resulting in distributions of the population by age and sex and requiring an assessment of probable future trends of fertility, mortality, and international migration.

Economic associations—The Organization for European Economic Co-Operation (OEEC), a regional grouping of Western European countries established in 1948 for the purpose of harmonizing national economic policies and conditions, was succeeded on September 30, 1961, by the Organization for Economic Cooperation and Development (OECD). The member nations of the OECD are Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, Slovakia, South Korea, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States.

Quality and comparability of the data—The quality and comparability of the data presented here are affected by a number of factors:

(1) The year for which data are presented may not be the same for all subjects for a particular country or for a given subject for different countries, though the data shown are the most recent available. All such variations have been noted. The data shown are for calendar years except as otherwise specified.

(2) The bases, methods of estimating, methods of data collection, extent of coverage, precision of definition, scope of territory, and margins of error may vary for different items within a particular country, and for like items for different countries. Footnotes and headnotes to the tables give a few of the major time-periods and coverage qualifications attached to the figures; considerably more detail is presented in the source publications. Many of the measures shown are, at best, merely rough indicators of magnitude.

(3) Figures shown in this section for the United States may not always agree with figures shown in the preceding sections. Disagreements may be attributable to the use of differing original sources, a difference in the definition of geographic limits (the 50 states, conterminous United States only, or the United States including certain outlying areas and possessions), or to possible adjustments made in the United States figures by other sources in order to make them more comparable with figures from other countries.

International comparisons of national accounts data—In order to compare national accounts data for different countries, it is necessary to convert each country's data into a common unit of currency, usually the U.S. dollar. The market exchange rates which are often used in converting national currencies do not necessarily reflect the relative purchasing power in the various countries. It is necessary that the goods and services produced in different countries be valued consistently if the differences observed are meant to reflect real differences in the volumes of goods and services produced. The use of purchasing power parities (see Table 1320) instead of exchange rates is intended to achieve this objective.

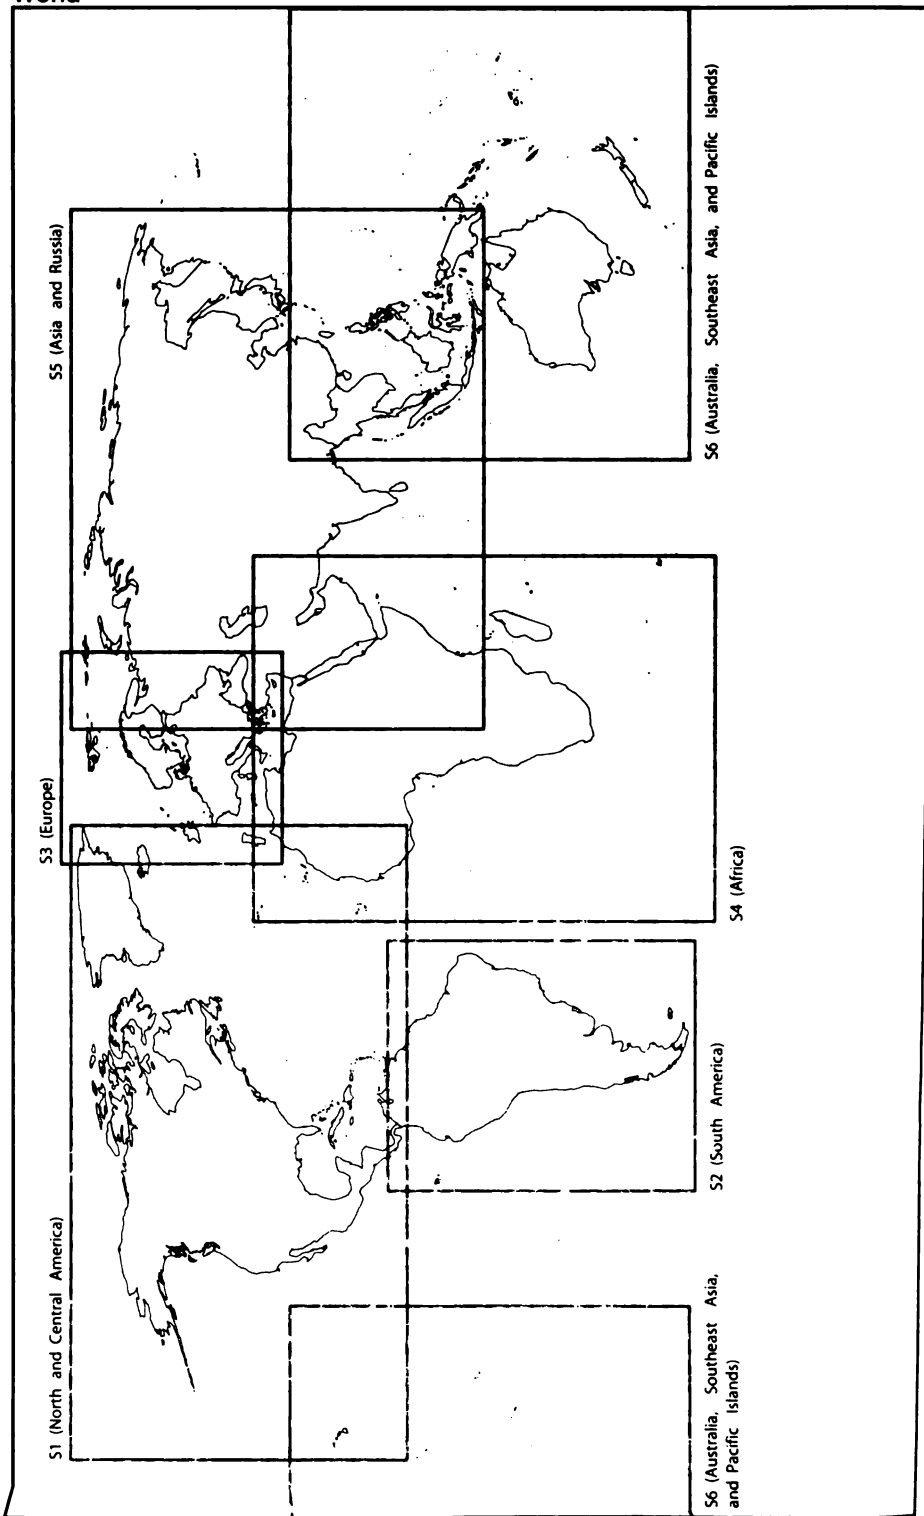

The method used to present the data shown in Table 1320 is to construct volume measures directly by revaluing the goods and services sold in different countries at a common set of international prices. By dividing the ratio of the gross domestic products of two countries expressed in their own national currencies by the corresponding ratio calculated at constant international prices, it is possible to derive the implied purchasing power parity (PPP) between the two currencies concerned. PPPs show how many units of currency are needed in one country to buy the same amount of goods and services which one unit of currency will buy in the other country. For further information, see *National Accounts, Main Aggregates, Volume 1*, issued annually by the Organization for Economic Cooperation and Development, Paris, France.

International Standard Industrial Classification—The original version of the International Standard Industrial Classification of All Economic Activities (ISIC) was adopted in 1948. Wide use has been made both nationally and internationally in classifying data according to kind of economic activity in the fields of production, employment, national income, and other economic statistics. A number of countries have utilized the ISIC as the basis for devising their industrial classification scheme.

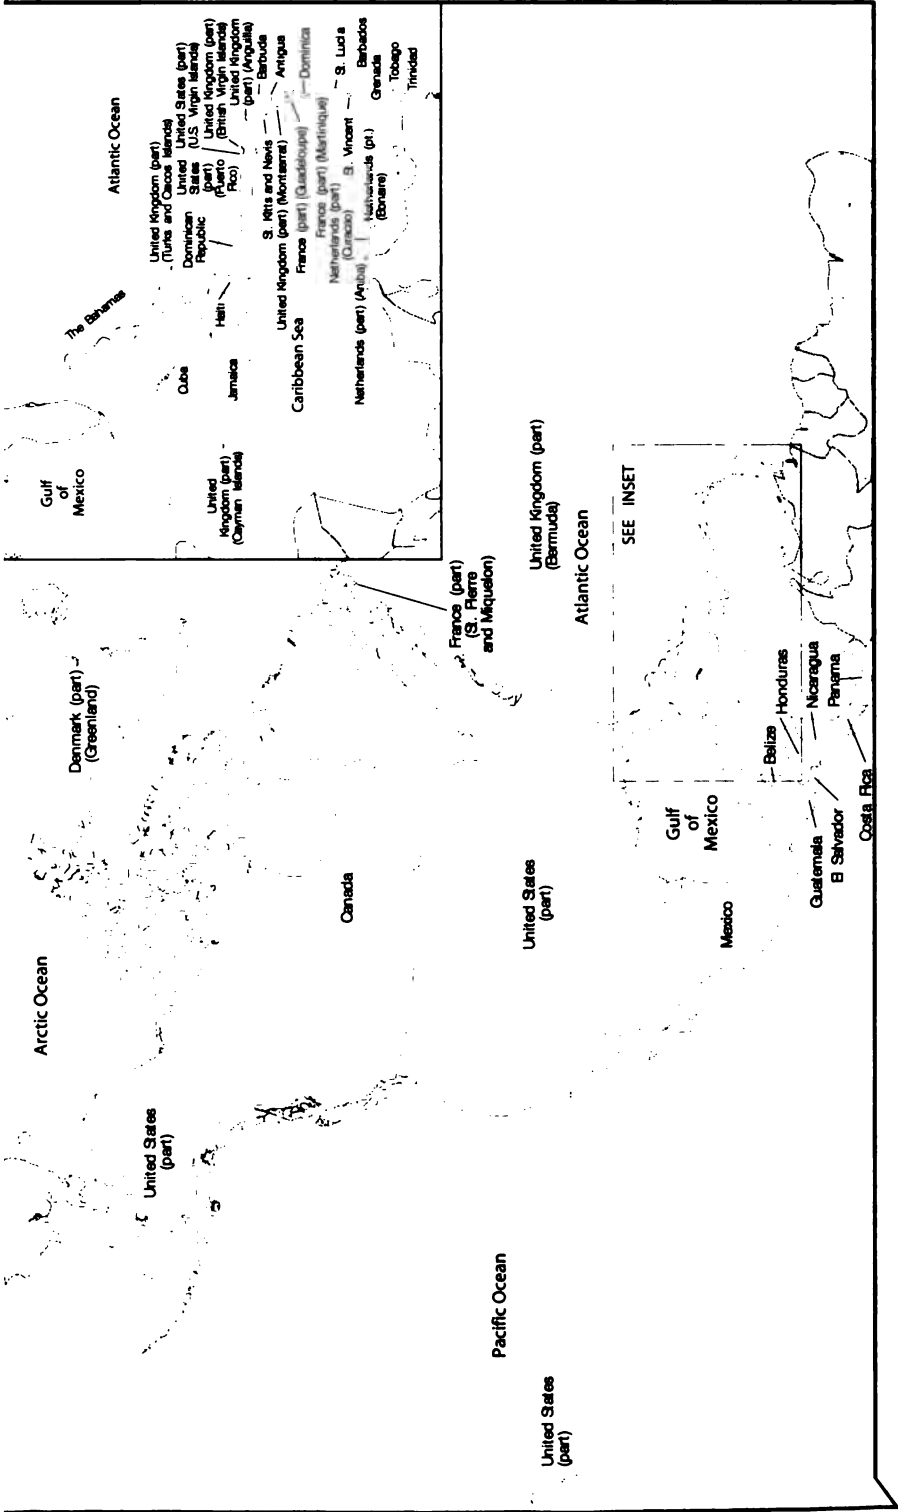

Substantial comparability has been attained between the industrial classifications of many other countries, including the United States and the ISIC by ensuring, as far as practicable, that the categories at detailed levels of classification in national schemes fitted into only one category of the ISIC. The United Nations, the International Labour Organization, the Food and Agriculture Organization, and other international bodies have utilized the ISIC in publishing and analyzing statistical data. Revisions of the ISIC were issued in 1958, 1968, and 1989.

International maps—A series of regional world maps is provided on pages 816-822. References are included in Table 1308 for easy location of individual countries on the maps. The Robinson map projection is used for this series of maps. A map projection is used to portray all or part of the round Earth on a flat surface, but this cannot be done without some distortion. For the Robinson projection, distortion is very low along the Equator and within 45 degrees of the center but is greatest near the poles. For additional information on map projections and maps, please contact the Earth Science Information Center, U.S. Geological Survey, 507 National Center, Reston, VA 22092.

No. 1308. Population by Country: 1990 to 2010

5,283,755 represents 5,283,755,000. Population data generally are de facto figures for the present territory. Population estimates were derived from information available as of spring 2000. East Timor became independent of Indonesia, but population data will not be available until the next update of the International Data Base. See text of this section for general comments concerning the data. For details of methodology, coverage, and reliability, see source. Minus sign (-) indicates decrease.

• Represents or rounds to zero. X Not applicable. Z Less than one person per square mile. ¹ Computed by the exponential method. For explanation of average annual percent change, see Guide to Tabular Presentation. ² With the establishment of diplomatic relations with China on January 1, 1979, the U.S. government recognized the People's Republic of China as the sole legal government of China and acknowledged the Chinese position that there is only one China and that Taiwan is part of China. ³ "Congo" is the official short-form name for both the Republic of Congo and the Democratic Republic of the Congo. To distinguish one from the other the U.S. Dept. of State adds the capital in parentheses. This practice is unofficial and provisional. ⁴ The Gaza Strip and West Bank are Israeli occupied with interim status subject to Israeli/Palestinian negotiations. The final status is to be determined.

- Represents zero. NA Not available. ¹ Carbon dioxide from energy use only. Excludes international marine bunkers. ² Municipal waste is that which is collected and treated by or for municipalities: household waste and bulky waste as well as comparable waste from small communities or industrial enterprises; and market and garden residue. ³ Wastes from spent fuel arising in nuclear power plants, measured in terms of heavy metal. ⁴ Mtoe=million tons of oil equivalent (primary energy supply). ⁵ Includes separate collection by private sector. ⁶ Household waste only.

No. 1318. Participation in Job-Related Continuing Education and Training by Country

[Percentage of the employed population 25 to 64 years old. Data refer to all job-related education and training organized, financed, or sponsored by authorities, provided by employers, or self-financed. Job-related continuing education and training refers to all organized, systematic education and training activities in which people take part in order to obtain knowledge and/or learn new skills for a current or a future job, to increase earnings, improve job and/or career opportunities in current or other fields, and generally to improve their opportunities for advancement and promotion. Data are based on International Adult Literacy Survey 1994-1998 and national household surveys on adult education and training]

¹ Based on constant (1995) price data converted to U.S. dollars using 1995 exchange rates. ² The goods and services produced in different countries should be valued consistently if the differences observed are meant to reflect real differences in the volumes of goods and services produced. The use of purchasing power parities (PPP) instead of exchange rates is intended to achieve this objective. PPPs show how many units of currency are needed in one country to buy the same amount of goods and services which one unit of currency will buy in the other country. See text of this section. ³ Excluding Czech Republic, Hungary, Poland, and Slovakia. ⁴ European Union: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden, and United Kingdom. ⁵ Includes overseas departments. ⁶ Based on System of National Accounts, 1968.

International Economic Composite Indexes by Country: 1980 to 2000

Annual percent change from previous year; derived from indexes with base 1990=100. The coincident index covers calendar years and the leading index changes are for years ending June 30 because they lead the coincident index by 6 months, on average. The G-7 countries are United States, Canada, France, Germany, Italy, United Kingdom, and Japan. A sign (-) indicates decrease.

No. 1324. Labor Productivity and Hours Worked by Country: 1990 to 2001

[Annual percent change for period shown. Data are derived from an annual database supported by the source. The Groninger Growth and Development Centre at the University of Groningen, Netherlands, maintains the database. For OECD countries and Eastern Europe, estimates are based on gross domestic product per hour worked, converted at purchasing power parities for 1995. Hence, estimates expressed in U.S. dollars at the price level of 1996 are corrected for differences in relative price levels. Minus sign (-) indicates decrease]

NA Not available. X Not applicable. ¹ Includes funded part of central government employee pension liabilities amounting to 8.3 percent of GDP in 1999. Expenditures data includes outlays net of surpluses of public enterprises. Receipts exclude the operating surpluses of public enterprises. ² Includes funded government employee pension liabilities amounting to 19 percent of GDP in 1999. This overstates the Canadian debt position relative to countries that have large unfunded liabilities for such pensions which are not counted in those countries' debt figures. ³ Debt data include accounts of the Inherited Debt Fund from 1995 on. The 1995 outlays are net of the debt taken on this year from the Inherited Debt funds. ⁴ Debt data include debt of the Japan Railway Settlement Corporation and the National Forest Special Account from 1998 on. The 1998 expenditures would have risen by 5.4 percentage points of GDP if account were taken of the assumption by the central government of the debt of these two entities.

- Represents or rounds to zero. NA Not available. ¹ Compensation includes, but real hourly compensation excludes, adjustments for payroll and employment taxes that are not compensation to employees, but are labor costs to employers. ² Index of hourly compensation divided by the index of consumer prices to adjust for changes in purchasing power. ³ Indexes in national currency adjusted for changes in prevailing exchange rates.

Source: U.S. Bureau of Labor Statistics, *International Comparisons of Manufacturing Productivity and Unit Labor Cost Trends*, September 26, 2002.

No. 1354. Indexes of Hourly Compensation Costs for Production Workers in Manufacturing by Country: 1980 to 2000

[United States=100. Compensation costs include pay for time worked, other direct pay (including holiday and vacation pay, bonuses, other direct payments, and the cost of pay in kind), employer expenditures for legally required insurance programs and contractual and private benefit plans, and for some countries, other labor taxes. Data adjusted for exchange rates. Area averages are trade-weighted to account for difference in countries' relative importance to U.S. trade in manufactured goods. The trade weights used are the sum of U.S. imports of manufactured products for consumption (customs value) and U.S. exports of domestic manufactured products (f.a.s. value) in 1992; see source for detail]

- Represents zero. NA Not available. X Not applicable. ¹ Grants or loans to countries and territories on Part I of the DAC List of Aid Recipients (developing countries which are: (a) undertaken by the official sector; (b) with promotion of economic development and welfare as the main objective; (c) at concessional financial terms (if a loan, having a grant element of at least 25 per cent). Technical cooperation is included in aid. ² Transactions by the official sector with countries on the List of Aid Recipients which do not meet the conditions for eligibility as Official Development Assistance or Official Aid, either because they are not primarily aimed at development, or because they have a grant element of less than 25 per cent. ³ Consists of flows at market terms financed out of private sector resources (i.e. changes in holdings of long term assets held by residents of the reporting country) and private grants (i.e. grants by nongovernment organizations, net of subsidies received from the official sector).

No. 1369. External Debt by Country: 1990 to 2000

[In millions of dollars (27,877 represents \$27,877,000,000). Total external debt is debt owed to nonresidents repayable in foreign currency, goods, or services. It is the sum of public, publicly guaranteed, and private nonguaranteed long-term debt, use of IMF credit, and short-term debt. Short-term debt includes all debt having an original maturity of one year or less and interest in arrears on long-term debt. Public debt comprises long-term external obligations of public debtors, including the national government and political subdivisions (or an agency of either) and autonomous public bodies, and external obligations of private debtors that are guaranteed for repayment by a public entity]

Section 31

2000 Census Data Sampler

This section presents a selection of data from the *2000 Census of Population and Housing* that became available too late to be incorporated into the topical sections of the *Abstract*. Data are presented for the states and, for some series, the 25 largest metro areas and cities. Most of these data are taken from the Census Bureau's *Demographic Profiles* presenting sample items from the decennial census. These data were asked of persons from a sample of housing units and persons in group quarters (e.g. college dormitories). The sample data include topics, such as school enrollment, educational attainment, marital status, grandparents as caregivers, veteran status, disability status of the civilian noninstitutionalized population, residence, nativity and place of birth, region of birth of the foreign

born, language spoken at home, ancestry, employment status, commuting to work, occupation, industry, class of worker, income, and poverty status. The sample items also include sample housing topics, such as units in structure, year structure built, rooms, year householder moved into unit, vehicles available, house heating fuel, occupants per room, value, mortgage status and selected monthly owner costs, selected monthly owner costs as a percentage of household income, gross rent, and gross rent as a percentage of household income. The *Demographic Profiles* also contain data collected from the entire population, such as sex, age, race, and household type, for example. For complete access to the *Demographic Profiles* see: <<http://www.census.gov/Press-Release/www/2002/demoprofiles.html>>.

No. 1377. Disability Status of Population by State: 2000

[In thousands except percent (64,689 represents 64,689,000). As of April. Covers civilian noninstitutionalized population. A disability is a long-lasting physical, mental, or emotional condition. This condition can make it difficult for a person to do activities such as walking, climbing stairs, dressing, bathing, learning, or remembering. This condition can also impede a person from being able to go outside the home alone or to work at a job or business. Based on sample data from the 2000 Census of Population and Housing; see text, Section 1, Population, and Appendix III]

¹ For homes with a mortgage. Includes mortgages, deeds of trust, taxes, utilities, etc. ² Represents the portion of a consolidated city that is not within one or more separately incorporated places.

Source of Tables 1398 and 1399: U.S. Census Bureau, "2000 Census of Population and Housing, Profiles of General Demographic Characteristics"; <<http://www.census.gov/Press-Release/www/2002/demoprofiles.html>>.

No. 1400. Specified Renter-Occupied Housing Units, Gross Rent by State: 2000

[In percent, except as indicated (35,200 represents 35,200,000). As of April 1. Specified renter-occupied units include all renter-occupied units except 1-unit attached or detached houses on 10 acres or more. Based on sample data from the 2000 Census of Population and Housing; see text, Section 1, Population, and Appendix III. For definition of median, see Guide to Tabular Presentation]

State	Percent of units with gross rent of—						Median gross rent (dol.)	Gross rent as a percent of household income, 1999			
	Total ¹ (1,000)	\$299 or less	\$300 to \$499	\$500 to \$749	\$750 to \$999	\$1,000 or more		Less than 15 percent	15 to 24 percent	25 to 34 percent	35 percent or more

¹ Includes units with no cash rent. ² Represents the portion of a consolidated city that is not within one or more separately incorporated places.

Source of Tables 1401 and 1402: U.S. Census Bureau, "2000 Census of Population and Housing, Profiles of General Demographic Characteristics"; <<http://www.census.gov/Press-Release/www/2002/demoprofiles.html>>

Appendix I

Guide to—Sources of Statistics, State Statistical Abstracts, and Foreign Statistical Abstracts

Alphabetically arranged, this guide contains references to the important primary sources of statistical information for the United States published since 1990. Secondary sources have been included if the information contained in them is presented in a particularly convenient form or if primary sources are not readily available. Nonrecurrent publications presenting compilations or estimates for years later than 1990 or types of data not available in regular series are also included. Much data are also available in press releases.

Much valuable information may also be found in state reports, foreign statistical abstracts, which are included at the end of this appendix, and in reports for particular commodities, industries, or similar segments of our economic and social structures, many of which are not included here.

Publications listed under each subject are divided into two main groups: "U.S. Government" and "Nongovernment." The location of the publisher of each report is given except for federal agencies located in Washington, DC. Most federal publications may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, tel. 202-512-1800, (Web site <<http://www.access.gpo.gov>> or from Government Printing Office bookstores in certain major cities. In some cases, federal publications may be obtained from the issuing agency.

U.S. GOVERNMENT

Administrative Office of the United States Courts

<http://www.uscourts.gov>

Guide to State Statistical Abstracts

This bibliography includes the most recent statistical abstracts for states published since 1995 plus those that will be issued in late 2002. For some states, a near equivalent has been listed in substitution for, or in addition to, a statistical abstract. All sources contain statistical tables on a variety of subjects for the state as a whole, its component parts, or both. The page counts given for publications are approximate. Internet sites also contain statistical data.

Alabama

University of Alabama, Center for Business and Economic Research, Box 870221, Tuscaloosa 35487-0221. 205-348-6191. Internet site <<http://cber.cba.ua.edu/>>

Appendix II

Metropolitan Areas: Concepts, Components, and Population

Statistics for metropolitan areas (MAs) shown in the *Statistical Abstract* represent areas designated by the U.S. Office of Management and Budget (OMB) according to published standards that are applied to Census Bureau data. The general concept of an MA is that of a core area containing a large population nucleus, together with adjacent communities having a high degree of economic and social integration with that core. Currently defined MAs are based on application of 1990 standards (which appeared in the Federal Register on March 30, 1990) to 1990 decennial census data and to subsequent Census Bureau population estimates, special census data, and 2000 census results. Current MA definitions were announced by OMB effective June 30, 1999. MAs include metropolitan statistical areas (MSAs), consolidated metropolitan statistical areas (CMSAs), and primary metropolitan statistical areas (PMSAs), as well as New England county metropolitan areas (NECMAs), the county-based alternative metropolitan areas for the city- and town-based MSAs and CMSAs of the six New England states.

Standards for designating metropolitan areas were first issued in 1949 by the then

Bureau of the Budget (predecessor of OMB), under the designation "standard metropolitan area" (SMA). The term was changed to "standard metropolitan statistical area" (SMSA) in 1959 and to "metropolitan statistical area" (MSA) in 1983. The collective term "metropolitan area" (MA) became effective in 1990.

OMB has been responsible for the official metropolitan areas since they were first defined, except for the period 1977 to 1981, when they were the responsibility of the Office of Federal Statistical Policy and Standards, Department of Commerce. The standards for designating metropolitan areas were modified in 1958, 1971,

1975, 1980, and 1990. They were modified again in 2000, but OMB will not re-designate areas until 2003.

Designating MSAs, CMSAs, and PMSAs—The current standards provide that each newly qualifying MSA must include at least: one city with 50,000 or more inhabitants, or a Census Bureau-defined urbanized area (of at least 50,000 inhabitants) and a total metropolitan population of at least 100,000 (75,000 in New England). Under the standards, the county (or counties) that contains the largest city becomes the "central county" (counties), along with any adjacent counties that have at least 50 percent of their population in the urbanized area surrounding the largest city. Additional "outlying counties" are included in the MSA if they meet specified requirements of commuting to the central counties and other selected requirements of metropolitan character (such as population density and percent urban). In New England, the MSAs are defined in terms of county subdivisions (primarily cities and towns) rather than counties. An area that meets these requirements for recognition as an MSA and also has a population of 1 million or more may be recognized as a CMSA if separate component areas can be identified within the entire area by meeting statistical criteria specified in the standards, and local opinion indicates support for recognizing the component areas. If recognized, the component areas are designated PMSAs, and the entire area becomes a CMSA. PMSAs, like the CMSAs that contain them, are composed of entire counties, except in New England where they are composed of county subdivisions. If no PMSAs are recognized, the entire area is designated as an MSA. As of the June 30, 1999, OMB announcement, there were 258 MSAs, and 18 CMSAs containing 73 PMSAs in the United States. In addition, there were three MSAs, one CMSA, and three PMSAs in Puerto Rico.

Central cities and MA titles—The larg-
ity in each MSA/CMSA is designated a
tral city." Additional cities qualify if
ified requirements are met concern-
population size and commuting pat-
is. The title of each MSA consists of
ames of up to three of its central cit-
and the name of each state into which
MSA extends. However, a central city
less than 250,000 population and
than one-third the population of the
s largest city is not included in an
title unless local opinion supports its
ision. Titles of PMSAs also typically
ased on central city names, but in
in cases consist of county names.
rally, titles of CMSAs are based on
itles of their component PMSAs.

**Naming New England County Metro-
politan Areas (NECMAs)**—The OMB de-
s: NECMAs as a county-based alterna-
to the county subdivision based New
and MSAs and CMSAs. The NECMA
n MSA or CMSA includes: the county
aining the first-named city in that
/CMSA title (this county may include
irst-named cities of other MSAs/
As as well), and each additional
ty having at least half its population
e MSAs/CMSAs whose first-named
s are in the previously identified
ity. NECMAs are not identified for in-
lual PMSAs. There are 12 NECMAs,
iding 1 for the Boston-Worcester-
ence, MA-NH-ME-CT CMSA and 1 for

the Connecticut portion of the New York-
Northern New Jersey-Long Island, NY-NJ-
CT-PA CMSA. Central cities of a NECMA are
those cities in the NECMA that qualify as
central cities of an MSA or a CMSA.
NECMA titles derive from names of central
cities.

Changes in MAs over time—Changes
in MAs since the 1950 census have con-
sisted chiefly of the recognition of new
areas as they reached the minimum re-
quired city or area population, and the
addition of counties (or county subdivi-
sions in New England) to existing areas as
new decennial census data showed them
to qualify. In some instances, formerly
separate MAs have been merged, a com-
ponent of an MA has been transferred
from one MA to another, or a component
has been dropped from an MA. The large
majority of changes have taken place on
the basis of decennial census data. How-
ever, Census Bureau population estimates
and special censuses serve as the basis
for intercensal updates.

Because of these historical changes in
geographic definitions, users must be
cautious in comparing MA data from dif-
ferent dates. For some purposes, compari-
sons of data for MAs as designated at
given dates may be appropriate; for other
purposes, it may be preferable to main-
tain consistent MA definitions.

Table A. New England County Metropolitan Areas (NECMAs) as of June 30, 1999

in thousands (145 represents 145,000). As of July

NECMA	Popu- lation, 2001	NECMA	Popu- lation, 2001	NECMA	Popu- lation, 2001

Appendix III

Limitations of the Data

roduction—The data presented in this *istical Abstract* came from many sources. The sources include not only several statistical bureaus and other organizations that collect and issue statistics as their principal activity, but also governmental administrative and regulatory agencies, private research bodies, trade associations, insurance companies, health organizations, and private organizations such as the National Education Association and philanthropic foundations. Consequently, the data vary considerably as to reference periods, definitions of terms, for ongoing series, the number and frequency of time periods for which data are available.

Some statistics presented were obtained directly and tabulated by various means. Some statistics are based on complete enumerations or censuses while others are based on samples. Some information is extracted from records kept for administrative or regulatory purposes (school enrollment, hospital records, securities transactions, financial accounts, social security records, income tax returns, etc.), while other information is obtained explicitly for statistical purposes through interviews or by mail. The estimation procedures used vary from highly sophisticated scientific techniques, to crude "informed guesses."

A set of data relates to a group of individuals or units of interest referred to as the *target universe* or *target population*, which may imply as the *universe* or *population*. Prior to data collection the target universe should be clearly defined. For example, if data are to be collected for the universe of households in the United States, it is necessary to define a "household." The target universe may not be completely identifiable. Cost and other considerations may restrict data collection to a *survey universe* based on some available list, and the list may be of date. This list is called a *survey frame* or *sampling frame*.

The data in many tables are based on data obtained for all population units, a *census*, or on data obtained for only a portion, or *sample*, of the population units. When the data presented are based on a sample, the sample is usually a scientifically selected *probability sample*. This is a sample selected from a list or sampling frame in such a way that every possible sample has a known chance of selection and usually each unit selected can be assigned a number, greater than zero and less than or equal to one, representing its likelihood or probability of selection.

For large-scale sample surveys, the probability sample of units is often selected as a multistage sample. The first stage of a multistage sample is the selection of a probability sample of large groups of population members, referred to as primary sampling units (PSUs). For example, in a national multistage household sample, PSUs are often counties or groups of counties. The second stage of a multistage sample is the selection, within each PSU selected at the first stage, of smaller groups of population units, referred to as secondary sampling units. In subsequent stages of selection, smaller and smaller nested groups are chosen until the ultimate sample of population units is obtained. To qualify a multistage sample as a probability sample, all stages of sampling must be carried out using probability sampling methods.

Prior to selection at each stage of a multistage (or a single stage) sample, a list of the sampling units or sampling frame for that stage must be obtained. For example, for the first stage of selection of a national household sample, a list of the counties and county groups that form the PSUs must be obtained. For the final stage of selection, lists of households, and sometimes persons within the households, have to be compiled in the field. For surveys of economic entities and for

the economic censuses the Bureau generally uses a frame constructed from the Bureau's Business Register. The Business Register contains all establishments with payroll in the United States including small single establishment firms as well as large multi-establishment firms.

Wherever the quantities in a table refer to an entire universe, but are constructed from data collected in a sample survey, the table quantities are referred to as *sample estimates*. In constructing a sample estimate, an attempt is made to come as close as is feasible to the corresponding universe quantity that would be obtained from a complete census of the universe. Estimates based on a sample will, however, generally differ from the hypothetical census figures. Two classifications of errors are associated with estimates based on sample surveys: (1) *sampling error*—the error arising from the use of a sample, rather than a census, to estimate population quantities and (2) *nonsampling error*—those errors arising from nonsampling sources. As discussed below, the magnitude of the sampling error for an estimate can usually be estimated from the sample data. However, the magnitude of the nonsampling error for an estimate can rarely be estimated. Consequently, actual error in an estimate exceeds the error that can be estimated.

The particular sample used in a survey is only one of a large number of possible samples of the same size which could have been selected using the same sampling procedure. Estimates derived from the different samples would, in general, differ from each other. The *standard error* (SE) is a measure of the variation among the estimates derived from all possible samples. The standard error is the most commonly used measure of the sampling error of an estimate. Valid estimates of the standard errors of survey estimates can usually be calculated from the data collected in a probability sample. For convenience, the standard error is sometimes expressed as a percent of the estimate and is called the relative standard error or *coefficient of variation* (CV). For example, an estimate of 200 units with an estimated standard error of 10 units has an estimated CV of 5 percent.

A sample estimate and an estimate of its standard error or CV can be used to construct interval estimates that have a prescribed confidence that the interval includes the average of the estimates derived from all possible samples with a known probability. To illustrate, if all possible samples were selected under essentially the same general conditions, and using the same sample design, and if an estimate and its estimated standard error were calculated from each sample, then: 1) Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average estimate derived from all possible samples; 2) approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average estimate derived from all possible samples; and 3) approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average estimate derived from all possible samples.

Thus, for a particular sample, one can say with the appropriate level of confidence (e.g., 90 percent or 95 percent) that the average of all possible samples is included in the constructed interval. Example of a confidence interval: An estimate is 200 units with a standard error of 10 units. An approximately 90 percent confidence interval (plus or minus 1.6 standard errors) is from 184 to 216.

All surveys and censuses are subject to nonsampling errors. Nonsampling errors are of two kinds—*random* and *nonrandom*. Random nonsampling errors arise because of the varying interpretation of questions (by respondents or interviewers) and varying actions of coders, keyers, and other processors. Some randomness is also introduced when respondents must estimate. Nonrandom nonsampling errors result from total nonresponse (no usable data obtained for a sampled unit), partial or item nonresponse (only a portion of a response may be usable), inability or unwillingness on the part of respondents to provide correct information, difficulty interpreting questions, mistakes

ording or keying data, errors of collection or processing, and coverage problems (overcoverage and undercoverage of target universe). Random nonresponse errors usually, but not always, result in an understatement of sampling error and thus an overstatement of the precision of survey estimates. Estimating the magnitude of nonsampling errors often require special experiments or access to independent data and, consequently, the magnitudes are seldom available.

While all types of nonsampling errors affect surveys also occur in complete censuses. Since surveys can be conducted on a smaller scale than censuses, nonsampling errors can presumably be controlled more tightly. Relatively more funds and effort can perhaps be expended to elicit responses, detecting and correcting response error, and reducing processing errors. As a result, survey results can sometimes be more accurate than census results.

Adjustments to compensate for suspected nonrandomness, adjustments of the sample estimates are often made. For example, adjustments are frequently made for nonresponse, both total and partial. Adjustments made for either type of nonresponse are often referred to as *imputation*. Imputation for total nonresponse is usually made by substituting for the missing questionnaire responses of the nonrespondents the "average" questionnaire responses of the respondents. These imputations usually are made separately for various groups of sample members formed by attempting to place respondents and nonrespondents together who have "similar" design or ancillary characteristics. Imputation for item nonresponse is usually made by substituting for the missing item the response to that of a respondent having characteristics that are "similar" to those of the nonrespondent.

The estimate calculated from a sample survey, the *total error* in the estimate is composed of the sampling error, which usually be estimated from the sample, and the nonsampling error, which cannot be estimated from the

sample. The total error present in a population quantity obtained from a complete census is composed of only nonsampling errors. Ideally, estimates of the total error associated with data given in the *Statistical Abstract* tables should be given. However, due to the unavailability of estimates of nonsampling errors, only estimates of the levels of sampling errors, in terms of estimated standard errors or coefficients of variation, are available. To obtain estimates of the estimated standard errors from the sample of interest, obtain a copy of the referenced report which appears at the end of each table.

Principal data bases—Beginning below are brief descriptions of 41 of the sample surveys and censuses that provide a substantial portion of the data contained in this *Abstract*.

U.S. DEPARTMENT OF AGRICULTURE, National Agriculture Statistics Service

Census of Agriculture

Universe, Frequency, and Types of Data:

Complete count of U.S. farms and ranches conducted once every 5 years with data at the national, state, and county level. Data published on farm numbers and related items/characteristics.

Type of Data Collection Operation: Complete census for— number of farms; land in farms; estimated market value of land and buildings, agriculture products sold; total cropland; irrigated land; farm operator characteristics; livestock and poultry inventory and sales; and selected crops harvested. Total farm production expenses, machinery and equipment, fertilizer and chemicals, and farm labor are estimated from a sample of farms.

Data Collection and Imputation Procedures: Data collection is by mailing questionnaires to all farmers and ranchers. Nonrespondents are contacted by telephone and correspondence followups. Imputations were made for all nonresponse item/characteristics.

Estimates of Sampling Error: Variability in the estimates is due to the sample selection and estimation for items collected

by sample and census nonresponse estimation procedures. The CVs for national and state estimates are generally very small. Approximately 85 percent response rate.

Other (nonsampling) Errors: Nonsampling errors are due to incompleteness of the census mailing list, duplications on the list, respondent reporting errors, errors in editing reported data, and in imputation for missing data. Evaluation studies are conducted to measure certain nonsampling errors such as list coverage and classification error. Results from the evaluation program for the 1997 census indicate the net under coverage amounted to about 13 percent of the nations total farms.

Sources of Additional Material: U.S. Department of Agriculture (NASS), *1997 Census of Agriculture*, Volume 2, Subject Series—Part 1, *Agriculture Atlas of the U.S.*; Part 2, *Coverage Evaluation*; Part 3, *Rankings of States and Counties*; Part 4, *History*; Part 5, *ZIP Code Tabulation of Selected Items*; and Volume 3 *Special Studies*, Part 1, *Farm and Ranch Irrigation Survey*; Part 2, *Census of Horticultural Specialities*; Part 3, *Census of Aquaculture*.

Basic Area Frame Sample

Universe, Frequency, and Types of Data: June agricultural survey collects data on planted acreage and livestock inventories. The survey also serves to measure list incompleteness and is subsampled for multiple frame surveys.

Type of Data Collection Operation: Stratified probability sample of about 11,000 land area units of about 1 sq. mile (range from 0.1 sq. mile in cities to several sq. miles in open grazing areas). Sample includes 42,000 parcels of agricultural land. About 20 percent of the sample replaced annually.

Data Collection and Imputation Procedures: Data collection is by personal enumeration. Imputation is based on enumerator observation or data reported by respondents having similar agricultural characteristics.

Estimates of Sampling Error: Estimated CVs range from 1 percent to 2 percent for regional estimates to 3 percent to 6 percent for state estimates of major crop acres and livestock inventories.

Other (nonsampling) Errors: Minimized through rigid quality controls on the collection process and careful review of all reported data.

Sources of Additional Material: U.S. Department of Agriculture, SRS, *Scope and Methods of the Statistical Reporting Service*, (name changed to National Agricultural Statistics Service), Miscellaneous Publication No. 1308, September 1983 (revised).

Multiple Frame Surveys

Universe, Frequency, and Types of Data: Surveys of U.S. farm operators to obtain data on major livestock inventories, selected crop acreage and production, grain stocks, and farm labor characteristics; farm economic data and chemical use data.

Type of Data Collection Operation: Primary frame is obtained from general or special purpose lists, supplemented by a probability sample of land areas used to estimate for list incompleteness.

Data Collection and Imputation Procedures: Mail, telephone, or personal interviews used for initial data collection. Mail nonrespondent followup by phone and personal interviews. Imputation based on average of respondents.

Estimates of Sampling Error: Estimated CV for number of hired farm workers is about 3 percent. Estimated CVs range from 1 percent to 2 percent for regional estimates to 3 percent to 6 percent for state estimates of livestock inventories and crop acreage.

Other (nonsampling) Errors: In addition to above, replicated sampling procedures used to monitor effects of changes in survey procedures.

Sources of Additional Material: U.S. Department of Agriculture, SRS, *Scope and Methods of the Statistical Reporting Service*, (name changed to National Agricultural Statistics Service), Miscellaneous Publication No. 1308, September 1983 (revised).

Objective Yield Surveys

Universe, Frequency, and Types of Data: Surveys for data on corn, cotton, potatoes, soybeans, and wheat, to forecast and estimate yields.

Type of Data Collection Operation: Random location of plots in probability sample. Corn, cotton, soybeans, spring wheat, and durum wheat selected in June from Basic Area Frame Sample (see above). Winter wheat and potatoes selected from March and June multiple frame surveys, respectively.

Data Collection and Imputation Procedures: Enumerators count and measure plant characteristics in sample fields. Production measured from plots at harvest. Harvest loss measured from post harvest gleanings.

Estimates of Sampling Error: CVs for national estimates of production are about 2-3 percent.

Other (nonsampling) Errors: In addition to above, replicated sampling procedures used to monitor effects of changes in survey procedures.

Sources of Additional Material: U.S. Department of Agriculture, SRS, *Scope and Methods of the Statistical Reporting Service*, (name changed to National Agricultural Statistics Service), Miscellaneous Publication No. 1308, September 1983 (revised).

U.S. CENSUS BUREAU

County Business Patterns

Universe, Frequency, and Types of Data: Annual tabulation of basic data items extracted from the Business Register, a file of all known single and multi establishment companies maintained and updated by the Census Bureau. Data include number of establishments, number of employees, first quarter and annual payrolls, and number of establishments by employment size class. Data are excluded for self-employed persons, domestic service workers, railroad employees, agricultural production workers, and most government employees.

Type of Data Collection Operation: The annual Company Organization Survey provides individual establishment data for multi establishment companies. Data for single establishment companies are obtained from various Census Bureau programs, such as the Annual Survey of

Manufactures and Current Business Surveys, as well as from administrative records of the Internal Revenue Service and the Social Security Administration.

Estimates of Sampling Error: Not Applicable. Other (nonsampling) Error: Response rates of greater than 85 percent for the 2000 Company Organization Survey.

Sources of Additional Materials: U.S. Census Bureau, *General Explanation of County Business Patterns*.

Census of Manufactures

Universe, Frequency, and Types of Data: Conducted every 5 years to obtain information on labor, materials, capital input and output characteristics, plant location, and legal form of organization for all plants in the United States with one or more paid employees. Universe was 365,000 manufacturing establishments in 1997.

Type of Data Collection Operation: Complete enumeration of data items obtained from 210,000 firms. Administrative records from Internal Revenue Service (IRS) and Social Security Administration (SSA) are used for 155,000 smaller single-location firms, which were determined by various cutoffs based on size and industry.

Data Collection and Imputation Procedures: Five mail and telephone follow-ups for larger nonrespondents. Data for small single-location firms (generally those with fewer than 10 employees) not mailed census questionnaires were estimated from administrative records of IRS and SSA. Data for nonrespondents were imputed from related responses or administrative records from IRS and SSA. Approximately 8 percent of total value of shipments was represented by fully imputed records in 1987.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Based on evaluation studies, estimates of nonsampling errors for 1972 were about 1.3 percent for estimated total payroll; 2 percent for total employment; and 1 percent for value of shipments. Estimates for later years are not available.

Sources of Additional Material: U.S. Census Bureau, *1987 Census of Manufactures, Industry Series, Geographic Area Series, and Subject Series.*

Foreign Trade—Export Statistics

Universe, Frequency, and Types of Data:

The export declarations collected by Customs are processed each month to obtain data on the movement of U.S. merchandise exports to foreign countries. Data obtained include value, quantity, and shipping weight of exports by commodity, country of destination, Customs district of exportation, and mode of transportation.

Type of Data Collection Operation: Shipper's Export Declarations (paper and electronic) are required to be filed for the exportation of merchandise valued over \$1,500 - \$2,500. Customs officials collect and transmit the documents to the Census Bureau on a flow basis for data compilation. Value data for shipments valued under \$2,501 are estimated, based on established percentages of individual country totals.

Data Collection and Imputation Procedures: Statistical copies of Shipper's Export Declarations are received on a daily basis from Customs ports throughout the country and subjected to a monthly processing cycle. They are fully processed to the extent they reflect items valued over \$2,500. Estimates for shipments valued at \$2,500 or less are made, based on established percentages of individual country totals.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Clerical and complex computer checks intercept most processing errors and minimize otherwise significant reporting errors; other nonsampling errors are caused by undercounting of exports to Canada due to the nonreceipt of some Shipper's Export Declarations.

Sources of Additional Material: U.S. Census Bureau, U.S. *International Trade in Goods and Services: Exports, General Imports, and Imports for Consumption, SITC, Commodity by Country, FT 925* (discontinued after 1996), *U.S. Imports of Merchandise*, and *U.S. Exports of Merchandise.*

Foreign Trade—Import Statistics

Universe, Frequency, and Types of Data:

The import entry documents collected are processed each month to obtain data on the movement of merchandise imported into the United States. Data obtained include value, quantity, and shipping weight by commodity, country of origin, Customs district of entry, and mode of transportation.

Type of Data Collection Operation: Import entry documents, either paper or electronic, are required to be filed for the importation of goods into the United States valued over \$2,000 or for articles which must be reported on formal entries. Customs officials collect and transmit statistical copies of the documents to the Census Bureau on a flow basis for data compilation. Estimates for shipments valued under \$2,001 and not reported on formal entries are based on estimated established percentages of individual country totals.

Data Collection and Imputation Procedures: Statistical copies of import entry documents, received on a daily basis from Customs ports of entry throughout the country, are subjected to a monthly processing cycle. They are fully processed to the extent they reflect items valued at \$2,501 and over or items which must be reported on formal entries.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Verification of statistical data reporting by Customs officials prior to transmittal and a subsequent program of clerical and computer checks are utilized to hold nonsampling errors arising from reporting and/or processing errors to a minimum.

Sources of Additional Material: U.S. Census Bureau, U.S. *International Trade in Goods and Services: Exports, General Imports, and Imports for Consumption, SITC, Commodity by Country, FT 925* (discontinued after 1996), *U.S. Imports of Merchandise*, and *U.S. Exports of Merchandise.*

Census of Governments

Universe, Frequency, and Types of Data:

Survey of all governmental units in the United States conducted every 5 years

to obtain data on government revenue, expenditures, debt, assets, employment and employee retirement systems, property values, public school systems, and number, size, and structure of governments.

Type of Data Collection Operation: Complete census. List of units derived through classification of government units recently authorized in each state and identification, counting, and classification of existing local governments and public school systems.

Data Collection and Imputation Procedures: Data collected through field and office compilation of financial data from official records and reports for states and large local governments; mail canvass of selected data items, like state tax revenue and employee retirement systems; and collection of local government statistics through central collection arrangements with state governments.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Some nonsampling errors may arise due to possible inaccuracies in classification, response, and processing.

Sources of Additional Material: U.S. Census Bureau, *Census of Governments, 1997*, various reports, and *State Government Finances: 1992*, GF 92, No. 3.

Annual Surveys of State and Local Government

Universe, Frequency, and Types of Data: Sample survey conducted annually to obtain data on revenue, expenditure, debt, and employment of state and local governments. Universe is all governmental units in the United States (about 87,500).

Type of Data Collection Operation: Sample survey includes all state governments, county governments with 100,000+ population, municipalities with 75,000+ population, townships with 50,000+ population, all school districts with 10,000+ enrollment in March 1999, and other governments meeting certain criteria; probability sample for remaining units.

Data Collection and Imputation Procedures: Field and office compilation of data from official records and reports

for states and large local governments; central collection of local governmental financial data through cooperative agreements with a number of state governments; mail canvass of other units with mail and telephone follow-ups of nonrespondents. Data for nonresponses are imputed from previous year data or obtained from secondary sources, if available.

Estimates of Sampling Error: State and local government totals are generally subject to sampling variability of less than 3 percent.

Other (nonsampling) Errors: Nonresponse rate is less than 15 percent for local governments. Other possible errors may result from undetected inaccuracies in classification, response, and processing.

Sources of Additional Material: U.S. Census Bureau, *Public Employment in 1992*, GE 92, No. 1, *Governmental Finances in 1991-1992*, GF 92, No. 5, and *Census of Governments, 1997*, various reports. Web site references: Employment - state and local site: <<http://www.census.gov/govs/www/apes.html>>. Finance - state and local site: <<http://www.census.gov/govs/estimate.html>>. Finance - state site: <<http://www.census.gov/govs/www/state.html>>.

American Housing Survey

Universe, Frequency, and Types of Data: Conducted nationally in the fall in odd numbered years to obtain data on the approximately 116 million occupied or vacant housing units in the United States (group quarters are excluded). Data include characteristics of occupied housing units, vacant units, new housing and mobile home units, financial characteristics, recent mover households, housing and neighborhood quality indicators, and energy characteristics.

Type of Data Collection Operation: The national sample was a multistage probability sample with about 53,000 units eligible for interview in 2001. Sample units, selected within 394 PSUs, were surveyed over a 4-month period.

Data Collection and Imputation Procedures: For 2001, the survey was conducted by personal interviews. The interviewers obtained the information

from the occupants or, if the unit was vacant, from informed persons such as landlords, rental agents, or knowledgeable neighbors.

Estimates of Sampling Error: For the national sample, illustrations of the S.E. of the estimates are provided in the Appendix D of the 2001 report. As an example, the estimated CV is about 0.2 percent for the estimated percentage of owner occupied units with two persons.

Other (nonsampling) Errors: Response rate was about 93 percent. Nonsampling errors may result from incorrect or incomplete responses, errors in coding and recording, and processing errors. For the 2001 national sample, approximately 1.9 percent of the total housing inventory was not adequately represented by the AHS sample.

Sources of Additional Material: U.S. Census Bureau, *Current Housing Reports*, Series H-150 and H-170, *American Housing Survey*.

Monthly Survey of Construction

Universe, Frequency, and Types of Data: Survey conducted monthly of newly constructed housing units (excluding mobile homes). Data are collected on the start, completion, and sale of housing. (Annual figures are aggregates of monthly estimates.)

Type of Data Collection Operation: Probability sample of housing units obtained from building permits selected from 17,000 places. For nonpermit places, multistage probability sample of new housing units selected in 169 PSUs. In those areas, all roads are canvassed in selected enumeration districts.

Data Collection and Imputation Procedures: Data are obtained by telephone inquiry and field visit.

Estimates of Sampling Error: Estimated CV of 3 percent to 4 percent for estimates of national totals, but may be higher than 20 percent for estimated totals of more detailed characteristics, such as housing units in multiunit structures.

Other (nonsampling) Errors: Response rate is over 90 percent for most items. Nonsampling errors are attributed to definitional problems, differences in

interpretation of questions, incorrect reporting, inability to obtain information about all cases in the sample, and processing errors.

Sources of Additional Material: All data are available on the Internet at <<http://www.census.gov/const/www/newsresconstindex.html>>. Further documentation of the survey is also available at that site.

Value of Construction Put in Place

Universe, Frequency, and Types of Data: Survey conducted monthly on total value of all construction put in place in the current month, both public and private projects. Construction values include costs of materials and labor, contractors' profits, overhead costs, cost of architectural and engineering work, and miscellaneous project costs. (Annual figures are aggregates of monthly estimates.)

Type of Data Collection Operation: Varies by type of activity: Total cost of private one-family houses started each month is distributed into value put in place using fixed patterns of monthly construction progress; using a multistage probability sample, data for private multifamily housing are obtained by mail from owners of multiunit projects. Data for residential additions and alterations are obtained in a quarterly survey measuring expenditures; monthly estimates are interpolated from quarterly data. Estimates of value of private nonresidential construction, and state and local government construction are obtained by mail from owners (or agents) for a probability sample of projects. Estimates of farm nonresidential construction expenditures are based on U.S. Department of Agriculture annual estimates of construction; public utility estimates are obtained from reports submitted to Federal regulatory agencies and from private utility companies; estimates of Federal construction are based on monthly data supplied by Federal agencies.

Data Collection and Imputation Procedures: See "Type of Data Collection Operation." Imputation accounts for approximately 20 percent of estimated value of construction each month.

Estimates of Sampling Error: CV estimates for private nonresidential construction range from 3 percent for estimated value of industrial buildings to 9 percent for religious buildings. CV is approximately 2 percent for total new private nonresidential buildings.

Other (nonsampling) Errors: For directly measured data series based on samples, some nonsampling errors may arise from processing errors, imputations, and misunderstanding of questions. Indirect data series are dependent on the validity of the underlying assumptions and procedures.

Sources of Additional Material: U.S. Census Bureau, *Construction Reports*, Series C30, *Value of Construction Put in Place*.

Annual Survey of Manufactures

Universe, Frequency, and Types of Data:

The Annual Survey of Manufactures (ASM) is conducted annually, except for years ending in 2 and 7 for all manufacturing establishments having one or more paid employees. The purpose of the ASM is to provide key intercensal measures of manufacturing activity, products, and location for the public and private sectors. The ASM provides statistics on employment, payroll, worker hours, payroll supplements, cost of materials, value added by manufacturing, capital expenditures, inventories, and energy consumption. It also provides estimates of value of shipments for 1,500 classes of manufactured products.

Type of Data Collection Operation: The ASM includes approximately 55,000 establishments selected from the census universe of 365,000 manufacturing establishments. Some 25,000 large establishments are selected with certainty, and some 30,000 other establishments are selected with probability proportional to a composite measure of establishment size. The survey is updated from two sources; Internal Revenue Service administrative records are used to include new single-unit manufacturers and the Company organization Survey identifies new establishments of multi-unit forms.

Data Collection and Imputation Procedures: Survey is conducted by mail with phone and mail follow-ups of nonrespondents. Imputation (for all nonresponse items) is based on previous year reports, or for new establishments in survey, on industry averages.

Estimates of Sampling Error: Estimated standard errors for number of employees, new expenditure, and for value added totals are given in annual publications. For U.S. level industry statistics, most estimated standard errors are 2 percent or less, but vary considerably for detailed characteristics.

Other (nonsampling) Errors: Response rate is about 85 percent. Nonsampling errors include those due to collection, reporting, and transcription errors, many of which are corrected through computer and clerical checks.

Sources of Additional Material: U.S. Census Bureau, *Annual Survey of Manufactures*, and Technical Paper 24.

Census of Population

Universe, Frequency, and Types of Data:

Complete count of U.S. population conducted every 10 years since 1790. Data obtained on number and characteristics of people in the U.S.

Type of Data Collection Operation: In 1970, 1980, 1990 and 2000 complete census for some items—age, sex, race, and relationship to householder. In 1970, other items collected from a 5 percent and a 15 percent probability (systematic) sample of the population. In 1980, approximately 19 percent of the housing units were included in the sample; in 1990 and 2000, approximately 17 percent.

Data Collection and Imputation Procedures: In 1970, extensive use of mail questionnaires in urban areas; personal interviews in most rural areas. In 1980, 1990, and 2000, mail questionnaires were used in even more areas than in 1970, with personal interviews in the remainder. Extensive telephone and personal followup for nonrespondents was done in the censuses. Imputations were made for missing characteristics.

Estimates of Sampling Error: Sampling errors for data are estimated for all items collected by sample and vary by

characteristic and geographic area. The CVs for national and state estimates are generally very small.

Other (nonsampling) Errors: Since 1950, evaluation programs have been conducted to provide information on the magnitude of some sources of nonsampling errors such as response bias and undercoverage in each census. Results from the evaluation program for the 1990 census indicate that the estimated net under coverage amounted to about 1.5 percent of the total resident population.

Sources of Additional Material: U.S. Census Bureau, *The Coverage of Population in the 1980 Census, PHC80-E4; Content Reinterview Study: Accuracy of Data for Selected Population and Housing Characteristics as Measured by Reinterview, PHC80-E2; 1980 Census of Population, Vol. 1, (PC80-1), Appendixes B, C, and D.*

Current Population Survey (CPS)

Universe, Frequency, and Types of Data: Nationwide monthly sample survey of civilian noninstitutional population, 15 years old or over, to obtain data on employment, unemployment, and a number of other characteristics.

Type of Data Collection Operation: Multi-stage probability sample of about 50,000 households in 754 PSUs in 1996 expanded to about 60,000 households in July 2001. Over-sampling in some states and the largest MSAs to improve reliability for those areas of employment data on annual average basis. A continual sample rotation system is used. Households are in sample 4 months, out for 8 months, and in for 4 more. Month-to-month overlap is 75 percent; year-to-year overlap is 50 percent.

Data Collection and Imputation Procedures: For first and fifth months that a household is in sample, personal interviews; other months, approximately, 85 percent of the data collected by phone. Imputation is done for both item and total nonresponse. Adjustment for total nonresponse is done by a predefined cluster of units, by MSA size and residence; for item nonresponse imputation varies by subject matter.

Estimates of Sampling Error: Estimated CVs on national annual averages for labor force, total employment, and nonagricultural employment, 0.2 percent; for total unemployment and agricultural employment, 1.0 percent to 2.5 percent. The estimated CVs for family income and poverty rate for all persons in 1986 are 0.5 percent and 1.5 percent respectively. CVs for subnational areas, such as states, would be larger and would vary by area.

Other (nonsampling) Errors: Estimates of response bias on unemployment are not available, but estimates of unemployment are usually 5 percent to 9 percent lower than estimates from reinterviews. Six to 7.0 percent of sample households unavailable for interviews.

Sources of Additional Material: U.S. Census Bureau and Bureau of Labor Statistics, *Current Population Survey; Design and Methodology*, (Tech. Paper 63), available on Internet <www.bls.census.gov/cps/tp/tp63.htm> and Bureau of Labor Statistics, *Employment and Earnings*, monthly, Explanatory Notes and Estimates of Error, Tables 1-A through 1-D and *BLS Handbook of Methods*, Chapter 1 (Bulletin 2490.)

Surveys of Minority- and Women-Owned Business Enterprises (SMOBE/SWOBE)

Universe, Frequency, and Types of Data: The surveys provide basic economic data on businesses owned by Blacks, Hispanics, Asians, Pacific Islanders, Alaska Natives, American Indians, and Women. All firms operating during 1997, except those classified as agricultural, are represented. The lists of all firms (or sample frames) are compiled from a combination of business tax returns and data collected on other economic census reports. The published data include the number of firms, gross receipts, number of paid employees, and annual payroll. The data are presented by geographic area, industry, size of firm, and legal form of organization of firm.

Type of Data Collection Operation: The surveys are based on a stratified probability sample of approximately 2.5 million firms from a universe of approximately 20.8 million firms. There were

approximately 5.3 million firms with paid employees and 15.5 million firms with no paid employees. The data are based on the entire firm rather than on individual locations of a firm.

Data Collection and Imputation Procedures: Data were collected through a mailout/mailback operation. Compensation for missing data is addressed through reweighting, edit correction, and standard statistical imputation methods.

Estimates of Sampling Error: Variability in the estimates is due to the sample selection and estimation for items collected by SMOBE/SWOBE. CVs are applicable to only published cells in which sample cases are tabulated. The CVs for number of firms and receipts at the national level range from 1 to 4 percent. Other (nonsampling) Error: Nonsampling errors are attributed to many sources: inability to obtain information for all cases in the universe, adjustments to the weights of respondents to compensate for nonrespondents, imputation for missing data, data errors and biases, mistakes in recording or keying data, errors in collection or processing, and coverage problems.

Sources of Additional Materials: U.S. Census Bureau, *Guide to the 1997 Economic Census and Related Statistics*.

1997 Economic Census (Geographic Area Series and Subject Series Reports) (for NAICS sectors 22, 42, 4445, 48-49, and 51-81)

Universe, Frequency, and Types of Data: Conducted every 5 years to obtain data on number of establishments, number of employees, total payroll size, total sales, and other industry specific statistics. In 1997, the universe was all employer and nonemployer establishments primarily engaged in wholesale, retail, utilities, finance & insurance, real estate, transportation & warehousing, and other service industries.

Type of Data Collection Operation: All large employer firms were surveyed (i.e. all employer firms above the payroll size cutoff established to separate large from small employers) plus a 5 percent to 25 percent sample of the small employer firms. Firms with no employees were not required to file a census return.

Data Collection and Imputation Procedures: Mail questionnaires were used with both mail and telephone followups for nonrespondents. Data for nonrespondents and for small employer firms not mailed a questionnaire were obtained from administrative records of the IRS and Social Security Administration or imputed. Nonemployer data were obtained exclusively from IRS 1997 income tax returns.

Estimates of Sampling Error: Not applicable for basic data such as sales, revenue, payroll, etc. Other (nonsampling) Errors: Trade area level unit response rates in 1997 ranged from 85 percent to 99 percent. Item response rates ranged from 60 percent to 90 percent with lower rates for the more detailed questions. Nonsampling errors may occur during the collection, reporting, and keying of data, and industry misclassification.

Sources of Additional Material: U.S. Census Bureau, *1997 Economic Census: Geographic Area Series and Subject Series Reports* (by NAICS sector), Appendix C and <www.census.gov/con97.html>

Current Business Surveys

Universe, Frequency, and Types of Data: Provides monthly estimates of retail sales by kind of business, and end-of-month inventories of retail stores; wholesale sales and end-of-month inventories; and annual receipts of selected service industries.

Type of Data Collection Operation: Probability sample of all firms from a list frame and, additionally, for retail and service an area frame. The list frame is the Bureau's Standard Statistical Establishment List (SSEL) updated quarterly for recent birth Employer Identification (EI) Numbers issued by the Internal Revenue Service and assigned a kind-of-business code by the Social Security Administration. The largest firms are included monthly.

Data Collection and Imputation Procedures: Data are collected by mail questionnaire with telephone followups for nonrespondents. Imputation made for each nonresponse item and each item failing edit checks.

Estimates of Sampling Error: For the 2001 monthly surveys, median CVs are about 0.6 percent for estimated total retail sales, 1.4 percent for wholesale sales, 1.7 percent for wholesale inventories. For dollar volume of receipts, CVs from the Service Annual Survey vary by kind of business and range between 1.5 percent to 15.0 percent. Sampling errors are shown in monthly publications.

Other (nonsampling) Errors: Imputation rates are about 18 percent to 23 percent for monthly retail sales, 30 percent for wholesale sales, about 32 percent for monthly wholesale inventories and 14 percent for the *Service Annual Survey*.

Sources of Additional Material: U.S. Census Bureau, *Current Business Reports*, *Monthly Retail Trade*, *Monthly Wholesale Trade*, and *Service Annual Survey*.

Service Annual Surveys

Universe, Frequency, and Types of Data: Provides national estimates for taxable and tax-exempt firms on selected service industries as defined by the North American Industrial Classification System (NAICS). Industries covered by the Service Annual Survey include all or part of the following NAICS sectors: Transportation and Warehouse (NAICS 48-49); Information (NAICS 51); Finance (NAICS 52); Real Estate and Leasing (NAICS 53); Professional, Scientific, and Technical Services (NAICS 54); Administrative and Support and Waste Management and Remediation Services (NAICS 56); Health Care and Social Assistance (NAICS 62); Arts, Entertainment, and Recreation (NAICS 71); and Other Services, except Public Administration (NAICS 81). Items collected include total revenue and revenue from e-commerce transactions; and for selected industries, revenue from detailed service products, total expenses and expenses by major type, revenue from exported services, and inventories. The Service Annual Survey is mailed in January and collects calendar year data for the prior year. Data collection continues for approximately 14 weeks. The data are published approximately 12 months after the initial survey mailing.

Type of Data Collection Operation: Data are obtained from a mail-out/mail-back probability sample of approximately 50,000 selected service firms with paid employees. The survey is supplemented with business births on a quarterly basis. The sampling frame for the Service Annual Survey (SAS) has two types of sampling units represented—Employer Identification Numbers (EINS) and large, multiple-establishment firms. Both sampling units represent clusters of one or more establishments owned or controlled by the same firm. The information used to create these sampling units was extracted the Census Bureau's Business Register and includes information in the most recent Economic Census.

Estimates of Sampling Error: The estimates are based on a sample. Exact agreement with results that would be obtained from a complete enumeration of firms represented on the sampling frame using the same enumeration procedures is not expected. However, because each firm on the sampling frame has a known probability of being selected into the sample, it is possible to estimate the sampling variability of the survey estimates. The particular sample used in this survey is one of a large number of samples of the same size that could have been selected using the same design. If all possible samples had been surveyed under the same conditions, an estimate of an unknown population value could have been obtained from each sample. These samples give rise to a distribution of estimates for the unknown population value. A statistical measure of the variability among these estimates is the standard error, which can be approximated from any one sample.

Other (nonsampling) Errors: Nonsampling error encompasses all other factors that contribute to the total error of a sample survey estimate and may occur in Census. In the Service Annual Survey, nonsampling error can be attributed to many sources: inability to obtain information about all units in the sample; response errors; differences in the interpretation of the questions; mistakes in coding or keying the data obtained; and other errors of collection, response, coverage, and processing.

Sources of Additional Material: U.S. Census Bureau, *Current Business Reports*, *Service Annual Survey*, Census Bureau Web site <<http://www.census.gov/econ/www/servmenu.html>>.

Wholesale Trade Survey

Universe, Frequency, and Types of Data: Provides monthly estimates of retail sales by kind of business, and end of month inventories of retail stores; wholesale sales and end of month inventories; and annual receipts of selected service industries.

Type of Data Collection Operation: Probability sample of all firms from a list frame and, additionally, for retail and service an area frame. The list frame is the Bureau's Standard Statistical Establishment List (SSEL) updated quarterly for recent birth Employer Identification (EI) Numbers issued by the Internal Revenue Service and assigned a kind of business code by the Social Security Administration. The largest firms are included monthly.

Data Collection and Imputation Procedures: Data are collected by mail questionnaire with telephone followups for nonrespondents. Imputation made for each nonresponse item and each item failing edit checks.

Estimates of Sampling Error: For the 2001 monthly surveys median CV's are about 0.6 percent for estimated total retail sales, 1.4 for wholesale sales, 1.7 for wholesale inventories. For dollar volume of receipts, CV's from the Service Annual Survey vary by kind of business and range between 1.5 percent to 15.0 percent. Sampling errors are shown in monthly publications.

Other (nonsampling) Errors: Imputation rates are about 18 percent to 23 percent for monthly retail sales, 30 percent for wholesale sales, about 32 percent for monthly wholesale inventories and 14 percent for the Service Annual Survey.

Sources of Additional Material: U.S. Census Bureau, *Current Business Reports*, *Monthly Retail Trade*, *Monthly Wholesale Trade*, and *Service Annual Survey*.

Monthly Retail Trade Survey

Universe, Frequency, and Types of Data: Provides monthly estimates of retail sales by kind of business and end of month inventories of retail stores; wholesale sales and end of month inventories; and annual receipts of selected service industries.

Type of Data Collection Operation: Probability sample of all firms from a list frame. The list frame is the Bureau's Standard Statistical Establishment List (SSEL) updated quarterly for recent birth Employer Identification (EI) Numbers issued by the Internal Revenue Service and assigned a kind of business code by the Social Security Administration. The largest firms are included monthly; a sample of others is included every month also.

Data Collection and Imputation Procedures: Data are collected by mail questionnaire with telephone followups for nonrespondents. Imputation made for each nonresponse item and each item failing edit checks.

Estimates of Sampling Error: For the 1989 monthly surveys, CV's are about 0.5 percent for estimated total retail sales, 0.99 percent for estimated total retail inventories, 1.2 percent for wholesale sales, 1.7 percent for wholesale inventories. For dollar volume of receipts, CV's from the Service Annual Survey vary by kind of business and range between 1.5 percent to 15.0 percent. Sampling errors are shown in monthly publications.

Other (nonsampling) Errors: Imputation rates are about 20 percent for monthly retail sales, 28 percent for monthly retail inventories, 30 percent for wholesale sales, about 32 percent for monthly wholesale inventories and 14 percent for the Service Annual Survey.

Sources of Additional Material: U.S. Census Bureau, *Current Business Reports*, *Monthly Retail Trade*, *Monthly Wholesale Trade*, *Service Annual Survey*.

U.S. DEPARTMENT OF
EDUCATION, National Center
for Education Statistics

**Higher Education General
Information Survey (HEGIS),
Fall Enrollment in Institutions
of Higher Education; beginning
1986, Integrated Postsecondary
Education Data Survey (IPEDS),
Fall Enrollment**

Universe, Frequency, and Types of Data: Annual survey of all institutions and branches listed in the *Directory* to obtain data on total enrollment by sex, level of enrollment, type of program, racial/ethnic characteristics (every other year prior to 1989, then annually) and attendance status of student, and on first-time students.

Type of Data Collection Operation: Complete census.

Data Collection and Imputation Procedures: Survey package is usually mailed in the spring with surveys due at varying dates in the summer and fall; mail and phone followup procedures for nonrespondents. Missing data are imputed by using data of similar institutions.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: For degree-granting institutions approximately 96.9 percent response rate in fall 1999.

Sources of Additional Material: U.S. Department of Education, National Center for Education Statistics, *Fall Enrollment in Higher Education*, annual.

**Higher Education General
Information Survey (HEGIS),
Financial Statistics of Institu-
tions of Higher Education;
beginning 1986, Integrated Post-
secondary Education Data Sur-
vey (IPEDS), Finance**

Universe, Frequency, and Types of Data: Annual survey of all institutions and branches listed in the *Education Directory, Colleges and Universities* to obtain data on financial status and operations, including current funds revenues, current funds expenditures, and physical plant assets.

Type of Data Collection Operation: Complete census.

Data Collection and Imputation Procedures: Survey package is usually mailed in the spring with surveys due at varying dates in the summer and fall; mail and phone followup procedures for nonrespondents. Missing data are imputed by using data of similar institutions.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: For 1997, 95 percent for degree-granting institutions.

Sources of Additional Material: U.S. Department of Education, National Center for Education Statistics, *Financial Statistics*.

**Higher Education General
Information Survey (HEGIS),
Degrees and Other Formal
Awards Conferred. Beginning
1986, Integrated Postsecondary
Education Data Survey (IPEDS),
Completions**

Universe, Frequency, and Types of Data: Annual survey of all institutions and branches listed in the *Education Directory, Colleges and Universities* to obtain data on earned degrees and other formal awards, conferred by field of study, level of degree, sex, and by racial/ethnic characteristics (every other year prior to 1989, then annually).

Type of Data Collection Operation: Complete census.

Data Collection and Imputation Procedures: Survey package is usually mailed in the spring with surveys due at varying dates in the summer and fall; mail and phone followup procedures for nonrespondents. Missing data are imputed by using data of similar institutions.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: For 1999-2000, approximately 84.4 percent response rate for degree-granting institutions.

Sources of Additional Material: U.S. Department of Education, National Center for Education Statistics, *Completions*, annual.

U.S. ENERGY INFORMATION ADMINISTRATION

Residential Energy Consumption Survey

Universe, Frequency, and Types of Data:

Quadriennial survey of households and fuel suppliers. Data are obtained on energy-related household characteristics, housing unit characteristics, use of fuels, and energy consumption and expenditures by fuel type.

Type of Data Collection Operation: Probability sample of 5,900 eligible units in 116 PSUs. For responding units, fuel consumption and expenditure data obtained from fuel suppliers to those households.

Data Collection and Imputation Procedures: Personal interviews. Extensive followup of nonrespondents including mail questionnaires for some households. Adjustments for nonrespondents were made in weighting for respondents. Most item nonresponses were imputed.

Estimates of Sampling Error: Estimated CVs for household averages: For consumption, 1.3 percent; for expenditures, 1.0 percent; for various fuels, values ranged from 2.0 percent for electricity to 7.0 percent for LPG.

Other (nonsampling) Errors: Household response rate of 81.0 percent. Nonconsumption data were mostly imputed for mail respondents (2.5 percent of eligible units). Usable responses from fuel suppliers for various fuels ranged from 80.7 percent for electricity to 56.6 percent for fuel oil.

Sources of Additional Material: U.S. Energy Information Administration, *A look at Residential Energy Consumption in 1997*.

U.S. NATIONAL CENTER FOR HEALTH STATISTICS (NCHS)

National Vital Statistics System

Universe, Frequency, and Types of Data:

Annual data on births and deaths in the United States.

Type of Data Collection Operation: Mortality data based on complete file of death records, except 1972, based on 50 percent sample. Natality statistics 1951-71,

based on 50 percent sample of birth certificates, except a 20 percent to 50 percent in 1967, received by NCHS.

Beginning 1972, data from some states received through Vital Statistics Cooperative Program (VSCP) and complete file used; data from other states based on 50 percent sample. Beginning 1986, all reporting areas participated in the VSCP.

Data Collection and Imputation Procedures: Reports based on records from registration offices of all states, District of Columbia, New York City, Puerto Rico, Virgin Islands, Guam, American Samoa, and Northern Marianas.

Estimates of Sampling Error: For recent years, CVs for births are small due to large portion of total file in sample (except for very small estimated totals).

Other (nonsampling) Errors: Data on births and deaths believed to be at least 99 percent complete.

Sources of Additional Material: U.S. National Center for Health Statistics, *Vital Statistics of the United States*, Vol. I and Vol. II, annual, and *National Vital Statistics Report*.

National Health Interview Survey (NHIS)

Universe, Frequency, and Types of Data:

Continuous data collection covering the civilian noninstitutional population to obtain information on personal and demographic characteristics, illnesses, injuries, impairments, and other health topics.

Type of Data Collection Operation: Multi-stage probability sample of 49,000 households (in 198 PSUs) from 1985 to 1994; 43,000 households (358 design PSUs) from 1995 on, selected in groups of about four adjacent households.

Data Collection and Imputation Procedures: Some missing data items (e.g., race, ethnicity) are imputed using a hot deck imputation value. Unit nonresponse is compensated for by an adjustment to the survey weights.

Estimates of Sampling Error: Estimates of Standard Error (SE): For 1997 medically attended injury or poisoning episodes rates in the past 12 months by falling for: females 47.70 (2.37), and males 36.92 (2.06) per 1,000 population; for

1997 injury episodes rates during the past 12 months inside the home - 29.38 (1.28) per 1,000 population.

Other (nonsampling) Errors: The response rate was 93.8 percent in 1996; in 1999, the total household response rate was 87.6 percent, with the final family response rate of 86.1 percent, and the final sample adult response rate of 69.6 percent; in 2000, the total household response rate was 88.9 percent, with the final family response rate of 72.1 percent, and the final sample adult response rate was 72.1 percent for the NHIS. (Note: The NHIS sample redesign was conducted in 1995, and the NHIS questionnaire was redesigned in 1997.)

Sources of Additional Material: U.S. National Center for Health Statistics, Summary Health Statistics for U.S. Children: National Health Interview Survey, 1997, Vital and Health Statistics, Series 10 #203; U.S. National Center for Health Statistics, Summary Health Statistics for the U.S. Population: National Health Interview Survey, 1997, Vital and Health Statistics, Series 10 #204; U.S. National Center for Health Statistics, Summary Health Statistics for U.S. Adults: National Health Interview Survey, 1997, Vital and Health Statistics, Series 10 #205 (In preparation); U.S. National Center for Health Statistics, Design and Estimation for the National Health Interview Survey, 1995-2004, Vital and Health Statistics, Series 2 #130; U.S. National Center for Health Statistics, Summary Health Statistics Technical Report: National Health Interview Survey, 1997-2003, Vital and Statistics, Series 2 #134.

U.S. BUREAU OF JUSTICE STATISTICS (BJS)

National Crime Victimization Survey

Universe, Frequency, and Types of Data: Monthly survey of individuals and households in the United States to obtain data on criminal victimization of those units for compilation of annual estimates.

Type of Data Collection Operation: National probability sample survey of about 50,000 interviewed households in 376 PSUs selected from a list of

addresses from the 1980 census, supplemented by new construction permits and an area sample where permits are not required.

Data Collection and Imputation Procedures: Interviews are conducted every 6 months for 3 years for each household in the sample; 8,300 households are interviewed monthly. Personal interviews are used in the first interview; the intervening interviews are conducted by telephone whenever possible.

Estimates of Sampling Error: CVs averaged over the period 1998-2001 are: 3.7 percent for personal crimes (includes all crimes of violence plus purse snatching crimes), 3.8 percent for crimes of violence; 12.1 percent for estimate of rape/sexual assault counts; 7.9 percent for robbery counts; 4.1 percent for assault counts; 11.2 percent for purse snatching (it refers to purse snatching and pocket picking); 2.5 percent for property crimes; 3.8 percent for burglary counts; 2.7 percent for theft (of property); and 5.2 percent for motor vehicle theft counts.

Other (nonsampling) Errors: Respondent recall errors which may include reporting incidents for other than the reference period; interviewer coding and processing errors; and possible mistaken reporting or classifying of events. Adjustment is made for a household noninterview rate of about 7 percent and for a within-household noninterview rate of 10 percent.

Sources of Additional Material: U.S. Bureau of Justice Statistics, *Criminal Victimization in the United States*, annual.

U.S. FEDERAL BUREAU OF INVESTIGATION

Uniform Crime Reporting (UCR) Program

Universe, Frequency, and Types of Data: Monthly reports on the number of criminal offenses that become known to law enforcement agencies. Data are collected on crimes cleared by arrest, by age, sex, and race of offender, and on assaults on law enforcement officers.

Type of Data Collection Operation: Crime statistics are based on reports of crime data submitted either directly to the FBI

by contributing law enforcement agencies or through cooperating state UCR programs.

Data Collection and Imputation Procedures: States with UCR programs collect data directly from individual law enforcement agencies and forward reports, prepared in accordance with UCR standards, to FBI. Accuracy and consistency edits are performed by FBI.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Coverage of 94 percent of the population (96 percent in MSA's, 87 percent in "other cities," and 88 percent in rural areas) by UCR program, though varying number of agencies report. Some error may be present through incorrect reporting.

Sources of Additional Material: U.S. Federal Bureau of Investigation, *Crime in the United States*, *Hate Crime Statistics*, annual, *Law Enforcement Officers Killed & Assaulted*, annual.

U.S. BUREAU OF LABOR STATISTICS

U.S. Census Bureau, Current Population Survey (CPS)

Universe, Frequency, and Types of Data: Nationwide monthly sample survey of civilian noninstitutional population, 15 years old or over, to obtain data on employment, unemployment, and a number of other characteristics.

Type of Data Collection Operation: Multi-stage probability sample of about 50,000 households in 754 PSUs in 1996, expanded to about 60,000 households in July 2001. Over-sampling in some states and the largest MSA's to improve reliability for those areas of employment data on annual average basis. A continual sample rotation system is used. Households are in sample 4 months, out for 8 months, and in for 4 more. Month-to-month overlap is 75 percent; year-to-year overlap is 50 percent.

Data Collection and Imputation Procedures: For first and fifth months that a household is in sample, personal interviews; other months, approximately, 85 percent of the data collected by phone. Imputation is done for both item and total nonresponse. Adjustment for total nonresponse is done by a predefined

cluster of units, by MSA size and residence; for item nonresponse imputation varies by subject matter.

Estimates of Sampling Error: Estimated CVs on national annual averages for labor force, total employment, and nonagricultural employment, 0.2 percent; for total unemployment and agricultural employment, 1.0 percent to 2.5 percent. The estimated CVs for family income and poverty rate for all persons in 1986 are 0.5 percent and 1.5 percent, respectively. CVs for subnational areas, such as states, would be larger and would vary by area.

Other (nonsampling) Errors: Estimates of response bias on unemployment are not available, but estimates of unemployment are usually 5 percent to 9 percent lower than estimates from reinterviews. About 7.5 percent of sample households unavailable for interviews.

Sources of Additional Material: U.S. Census Bureau and Bureau of Labor Statistics, *Current Population Survey; Design and Methodology*, (Tech. Paper 63 RV), available on Internet <www.bls.census.gov/cps/tp/tp63.htm> and Bureau of Labor Statistics, *Employment and Earnings*, monthly, Explanatory Notes and Estimates of Error, Tables 1-A through 1-D and *BLS Handbook of Methods*, Chapter 1 (Bulletin 2490).

Consumer Price Index (CPI)

Universe, Frequency, and Types of Data: Monthly survey of price changes of all types of consumer goods and services purchased by urban wage earners and clerical workers prior to 1978, and urban consumers thereafter. Both indexes continue to be published.

Type of Data Collection Operation: Prior to 1978, sample of various consumer items in 87 urban areas; thereafter, in 85 PSUs, except from January 1987 through March 1988, when 91 areas were sampled.

Data Collection and Imputation Procedures: Prices of consumer items are obtained from about 50,000 housing units, and 23,000 other reporters in 87 areas. Prices of food, fuel, and a few other items are obtained monthly; prices of most other commodities and services

are collected every month in the three largest geographic areas and every other month in others.

Estimates of Sampling Error: Estimates of standard errors are available.

Other (nonsampling) Errors: Errors result from inaccurate reporting, difficulties in defining concepts and their operational implementation, and introduction of product quality changes and new products.

Sources of Additional Material: U.S. Bureau of Labor Statistics, Internet site <<http://www.stats.bls.gov/cpihome.htm>> and *BLS Handbook of Methods*, Chapter 17, Bulletin 2490. U.S. Bureau of Labor Statistics Internet sites <<http://www.bls.gov/ppi>>.

Producer Price Index (PPI)

Universe, Frequency, and Types of Data: Monthly survey of producing companies to determine price changes of all commodities produced in the United States for sale in commercial transactions. Data on agriculture, forestry, fishing, manufacturing, mining, gas, electricity, public utilities, and a few services.

Type of Data Collection Operation: Probability sample of approximately 30,000 establishments that result in about 100,000 price quotations per month.

Data Collection and Imputation Procedures: Data are collected by mail and facsimile. If transaction prices are not supplied, list prices are used. Some prices are obtained from trade publications, organized exchanges, and government agencies. To calculate index, price changes are multiplied by their relative weights taken from 1997 shipment values from the Census of Manufactures.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Not available at present.

Sources of Additional Material: U.S. Bureau of Labor Statistics, *BLS Handbook of Methods*, Chapter 14, Bulletin 2490. U.S. Bureau of Labor Statistics Internet sites <<http://www.bls.gov/ppi>>.

Current Employment Statistics (CES) Program

Universe, Frequency, and Types of Data: Monthly survey covering about 7 million establishments to obtain data on employment, hours, and earnings, by industry.

Type of Data Collection Operation: Sample survey of over 300,000 establishments in June 2002.

Data Collection and Imputation Procedures: Cooperating state agencies mail questionnaires to sample establishments to develop state and local estimates; information is forwarded to BLS where national estimates are prepared.

Estimates of Sampling Error: Not available until survey redesign is completed.

Other (nonsampling) Errors: Estimates of employment adjusted annually to reflect complete universe. Average adjustment is 0.3 percent over the last decade.

Sources of Additional Material: U.S. Bureau of Labor Statistics, *Employment and Earnings*, monthly, Explanatory Notes and Estimates of Error, Tables 2-A through 2-H.

National Compensation Survey

Universe, Frequency, and Types of Data: Nationwide sample survey of establishments of all employment size classes, stratified by geographic area, in private industry and state and local government. Data collected include wages and salaries, employer costs of employer compensation, and employee benefits. Data produced include percent changes in the cost of employment cited in the ECI and costs per hour worked for individual benefits cited in the ECEC. The survey provides data by ownership (Private industry and state and local government), industry sector, major industry divisions, major occupational groups, bargaining status, metropolitan area status, and census region. ECEC also provides data by establishment size class.

Type of Data Collection Operation: Probability proportionate to size sample of establishments. The sample is replaced on a continual basis. Establishments are

in the survey for approximately 5 years, with some establishments replaced each quarter.

Data Collection and Imputation Procedures: For the initial visit, data are primarily collected in a personal visit to the establishment. Quarterly updates are obtained primarily by mail, fax, and telephone. Imputation is done for individual benefits.

Estimates of Sampling Error: Because standard errors vary from quarter to quarter, the ECI uses a 5-year moving average of standard errors to evaluate published series. These standard errors are available at <<http://www.bls.gov/ncs/ect/home.htm>>.

Other (nonsampling) Errors: Nonsampling errors have a number of potential sources. The primary sources are (1) survey nonresponse and (2) data collection and processing errors. Nonsampling errors are not measured. Procedures have been implemented for reducing nonsampling errors, however, primarily through quality assurance programs. These programs include the use of data collection reinterviews, observed interviews, computer edits of the data, and systematic professional review of the reports on which the data are recorded. The programs also serve as a training device to provide feedback to the field economists, or data collectors, on errors. And, they provide information on the sources of error which can be remedied by improved collection instructions or computer processing edits. Extensive training of field economists is also conducted to maintain high standards in data collection.

Sources of Additional Material: Bureau of Labor Statistics, *BLS Handbook of Methods*, Chapter 8 (Bulletin 2490) and <<http://www.bls.gov/ncs>>.

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

Survey of Consumer Finances

Universe, Frequency, and Types of Data: Periodic sample survey of families. In this survey a given household is divided into a primary economic unit and other

economic units. The primary economic unit, which may be a single individual, is generally chosen as the unit that contains the person who either holds the title to the home or is the first person listed on the lease. The primary unit is used as the reference family. The survey collects detailed data on the composition of family balance sheets, the terms of loans, and relationships with financial institutions. It also gathered information on the employment history and pension rights of the survey respondent and the spouse or partner of the respondent.

Type of Data Collection Operation: The survey employs a two-part strategy for sampling families. Some families were selected by standard multistage area-probability sampling methods from the 48 contiguous states. The remaining families in the survey were selected using tax data under the strict rules governing confidentiality and the rights of potential respondents to refuse participation.

Data Collection and Imputation Procedures: The Survey Research Center at the University of Michigan collected the 1989 survey data between August 1989 and March 1990. Adjustments for nonresponse errors are made through systematic imputation of unanswered questions and through weighting adjustments based on data used in the sample design for families that refused participation.

Estimates of Sampling Error: Because of the complex design of the survey, the estimation of potential sampling errors is not straightforward.

Other (nonsampling) Errors: The achieved sample of 3,143 families represents a response rate of about 69 percent in the area-probability sample and a rate of about 34 percent in the tax-data sample. Proper training of interviewers and careful design of questionnaires were used to control inaccurate survey responses.

Sources of Additional Material: Board of Governors of the Federal Reserve System, "Changes in Family Finances from 1983 to 1989: Evidence from the Survey of Consumer Finances," *Federal Reserve Bulletin*, January 1992.

U.S. INTERNAL REVENUE SERVICE

Statistics of Income, Individual Income Tax Returns

Universe, Frequency, and Types of Data:

Annual study of unaudited individual income tax returns, forms 1040, 1040A, and 1040EZ, filed by U.S. citizens and residents. Data provided on various financial characteristics by size of adjusted gross income, marital status, and by taxable and nontaxable returns. Data by state, based on 100 percent file, also include returns from 1040NR, filed by nonresident aliens plus certain self-employment tax returns.

Type of Data Collection Operation:

Annual 1999 stratified probability sample of approximately 177,000 returns broken into sample strata based on the larger of total income or total loss amounts as well as the size of business plus farm receipts. Sampling rates for sample strata varied from 0.05 percent to 100 percent.

Data Collection and Imputation Procedures:

Computer selection of sample of tax return records. Data adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return.

Estimates of Sampling Error:

Estimated CVs for tax year 1999: Adjusted gross income less deficit 0.11 percent; salaries and wages 0.21 percent; and tax-exempt interest received 1.78 percent. (State data not subject to sampling error.)

Other (nonsampling) Errors: Processing errors and errors arising from the use of tolerance checks for the data.

Sources of Additional Material: U.S. Internal Revenue Service, *Statistics of Income, Individual Income Tax Returns*, annual.

Statistics of Income, Sole Proprietorship Returns and Statistics of Income Bulletin

Universe, Frequency, and Types of Data:

Annual study of unaudited income tax returns of nonfarm sole proprietorships, form 1040 with business schedules. Data provided on various financial characteristics by industry.

Type of Data Collection Operation: Stratified probability sample of approximately 51,000 sole proprietorships for tax year 1999. The sample is classified based on presence or absence of certain business schedules; the larger of total income or loss; and size of business plus farm receipts. Sampling rates vary from 0.05 percent to 100 percent.

Data Collection and Imputation Procedures:

Computer selection of sample of tax return records. Data adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return.

Estimates of Sampling Error:

Estimated CVs for tax year 1999 are available. For sole proprietorships, business receipts, 0.71 percent; net income, (less loss), 1.05 percent; depreciation 1.42 percent

Other (nonsampling) Errors: Processing errors and errors arising from the use of tolerance checks for the data.

Sources of Additional Material: U.S. Internal Revenue Service, *Statistics of Income, Sole Proprietorship Returns* (for years through 1980) and *Statistics of Income Bulletin*, Vol. 21, No. 1 (summer 2001).

Statistics of Income, Partnership Returns and Statistics of Income Bulletin

Universe, Frequency, and Types of Data:

Annual study of unaudited income tax returns of partnerships, Form 1065. Data provided on various financial characteristics by industry.

Type of Data Collection Operation:

Stratified probability sample of approximately 43,000 partnership returns from a population of 2.0 million filed during calendar year 1999. The sample is classified based on combinations of gross receipts, net income or loss, and total assets, and on industry. Sampling rates vary from 0.08 percent to 100 percent.

Data Collection and Imputation Procedures:

Computer selection of sample of tax return records. Data are adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return. Data not available due to regulations are not imputed.

Estimates of Sampling Error: Estimated CVs for tax year 1999 (latest available): For number of partnerships, 0.3 percent; business receipts, 0.2 percent; net income, 0.5 percent; net loss, 1.6 percent.

Other (nonsampling) Errors: Processing errors and errors arising from the use of tolerance checks for the data.

Sources of Additional Material: U.S. Internal Revenue Service, *Statistics of Income, Partnership Returns and Statistics of Income Bulletin*, Vol. 21, No. 2 (fall 2001).

Corporation Income Tax Returns

Universe, Frequency, and Types of Data: Annual study of unaudited corporation income tax returns, Forms 1120 and 1120 (A, F, L, PC, REIT, RIC, and S), filed by corporations or businesses legally defined as corporations. Data provided on various financial characteristics by industry and size of total assets, and business receipts.

Type of Data Collection Operation: Stratified probability sample of approximately 141,400 returns for 1999, distributed by sample classes generally based on type of return, size of total assets, size of net income or deficit, and selected business activity. Sampling rates for sample strata varied from .25 percent to 100 percent.

Data Collection and Imputation Procedures: Computer selection of sample of tax return records. Data adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return and to achieve statistical definitions.

Estimates of Sampling Error: Estimated CVs for 1999: Number of returns in subgroups ranged from 0.2 percent with assets under \$100,000, to 0 percent with assets over \$100 mil.; for amount of net income 0.22 percent.

Other (nonsampling) Errors: Processing errors and errors arising from the use of tolerance checks for the data.

Sources of Additional Material: U.S. Internal Revenue Service, *Statistics of Income, Corporation Income Tax Returns*, annual.

U.S. SOCIAL SECURITY ADMINISTRATION

Benefit Data

Universe, Frequency, and Types of Data:

All persons receiving monthly benefits under Title II of Social Security Act. Data on number and amount of benefits paid by type and state.

Type of Data Collection Operation: Data based on administrative records. Data based on 100 percent files, as well as 10 percent and 1 percent sample files.

Data Collection and Imputation Procedures: Records used consist of actions pursuant to applications dated by subsequent post-entitlement actions.

Estimates of Sampling Error: Varies by size of estimate and sample file size.

Other (nonsampling) Errors: Processing errors, which are believed to be small.

Sources of Additional Material: U.S. Social Security Administration, *Annual Statistical Supplement to the Social Security Bulletin*.

Supplemental Security Income (SSI) Program

Universe, Frequency, and Types of Data:

All eligible aged, blind, or disabled persons receiving SSI benefit payments under SSI program. Data include number of persons receiving federally administered SSI, amounts paid, and state administered supplementation.

Type of Data Collection Operation: Data based on administrative records.

Data Collection and Imputation Procedures: Data adjusted to reflect returned checks and overpayment refunds. For federally administered payments, actual adjusted amounts are used.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Processing errors, which are believed to be small.

Sources of Additional Material: U.S. Social Security Administration, *Annual Statistical Supplement to the Social Security Bulletin*.

Appendix V
**Tables Deleted From the
2001 Edition of the Statistical Abstract**

2001
number

Sec. 1. POPULATION

- 14 Resident Population by Race, 1980 to 2000, and Projections, 2005 to 2050
- 21 Resident by Sex, Age, and State: 2000
- 25 Annual Immigration, Outmigration, and Net Migration for Regions: 1990 to 1999
- 43 Native and Foreign-Born Populations by Age, Sex, Race, and Hispanic Origin: 1990 to 1999
- 46 Population by Selected Ancestry Group and Region: 1990
- 47 Persons 5 Years Old and Over Speaking a Language Other Than English at Home by Language: 1990

Sec. 2. VITAL STATISTICS

- 86 Numbers and Rates of Pregnancies, Live Births, Induced Abortions, and Fetal Losses for Teenagers by Age, Race, and Hispanic Origin: 1996
- 88 Women 15-44 Years of Age Who Have Ever Had a Live Birth and Use of Maternity Leave for the Most Recent Birth: 1995
- 95 Average Lifetime in Years by Race by State: 1989-91
- 100 Death Rates by Age, Sex, and Race: 1970 to 1998
- 103 Infant Deaths and Infant Mortality Rates by Cause of Death: 1980 to 1998
- 106 Age-Adjusted Death Rates by Selected Causes: 1990 to 1998
- 113 Death Rates from Accidents and Violence by Race and Sex: 1990 to 1998
- 114 Deaths and Death Rates from Accidents by Type: 1980 to 1998
- 115 Homicide Rates by Race, Sex, and Age: 1997 and 1998
- 117 Marriages and Divorces: 1970 to 1998

Sec. 3. HEALTH AND NUTRITION

- 134 Medicare—Persons Served and Reimbursements: 1990 to 1998
- 146 Percent of Private Establishments Offering Health Insurance and Employees Enrolled: 1998
- 185 Disability Status of Children Under 15 Years Old: 1997
- 186 Disability Status of Persons 15 Years Old and Over: 1997
- 187 Receipt of Personal Assistance by Persons With Disabilities: 1997
- 200 Healthy Eating Indexes by Selected Food Groups and Dietary Guidelines: 1996

Sec. 4. EDUCATION

- 230 Public Elementary and Secondary School Building Conditions: 1999
- 247 Student Use of Computers at School: 1984 to 1997
- 267 Postsecondary Institutions Offering Distance Education: 1997-98
- 275 Finances of Public Colleges, 1990 to 1997, and by State, 1998
- 277 Student Borrowing Status for Higher Education: 1997

Sec. 5. LAW ENFORCEMENT, COURTS, AND PRISONS

- 307 Nonfatal Violent Victimizations With Injury by Victim Characteristics: Period 1992-98
- 324 U.S. District Courts—Civil Rights-Related Complaints and Disposition: 1990 to 1999

Sec. 10. NATIONAL DEFENSE AND VETERANS AFFAIRS

- 495 Worldwide Military Expenditures in Current and Constant Dollars: 1990 to 1997
- 496 Arms Trade in Constant (1997) Dollars—Selected Countries: 1990 to 1997

Sec. 12. LABOR FORCE, EMPLOYMENT, AND EARNINGS

- 585 Self-Employed Persons With Home-Based Businesses: 1997
- 599 Use of Traditional Methods of Job Searching: 1994 to 1999
- 610 Employers With Selected Work-Based Learning Activities by Establishment Size and Type: 1997
- 611 Adults Taking Work-Related Adult Education Classes: 1995 and 1999
- 614 Workers Using Computers on the Job: 1993 and 1997
- 628 Employee Benefits in Medium and Large Establishments: 1997
- 629 Employee Benefits in Small Establishments: 1996

Sec. 13. INCOME, EXPENDITURES, AND WEALTH

- 664 Household Income Before and After Taxes in Current and Constant (1999) Dollars: 1980 to 1999
- 665 Mean-Taxes Paid and Taxes Paid as a Percentage of Total Mean Before-Tax Income by Type of Tax in Current and Constant (1999) Dollars: 1980 to 1999
- 683 Persons 65 Years Old and Over Below Poverty Level: 1980 to 1999

Sec. 15. BUSINESS ENTERPRISES

- 734 Women-Owned and Minority-Owned Firms by Receipt Size: 1997
- 735 Women-Owned and Minority-Owned Firms With Paid Employees by Employment Size: 1997
- 736 Women-Owned and Minority-Owned Firms by State: 1997
- 737 Business Starts and Employment Associated With Start: 1990 to 1999
- 747 Academic Patenting—Number of U.S. Universities and Colleges With Patent Awards and Number of Academic Patent Awards: 1985 to 1998

Sec. 19. ENERGY AND UTILITIES

- 898 Residential Energy Consumption, Expenditures, and Average Price: 1980 to 1997
- 900 Commercial Buildings—Energy Consumption and Expenditures: 1995

Sec. CONSTRUCTION AND HOUSING

- 953 Housing Inventory for Selected Metropolitan Areas—Summary Characteristics: 1993 to 1999

Sec. 21. MANUFACTURES

- 1015 Firearms Manufacturers—Shipments, Exports, and Imports: 1980 to 1998
- 1016 Selected Industrial Air Pollution Control Equipment—Shipments: 1998

Sec. 22. DOMESTIC TRADE

- 1027 Motor Vehicle Retail Sales: 1980 to 2000
- 1041 U.S. Mail Order Sales by Kind of Business: 1997 and 1998
- 1042 Catalog Sales—Method Used and Characteristic of Purchaser: 2000
- 1043 Merchandise or Services Ordered by Mail or Phone by Characteristic of Purchaser: 2000
- 1044 Population Ordering by Catalog by Type of Product and Characteristic of Purchaser: 2000

Sec. 23. TRANSPORTATION

- 1067 Civil Flying—Summary: 1970 to 1997
- 1088 Recreational Vehicles—Number and Retail Value of Shipments: 1980 to 1997

Sec. 24. INFORMATION AND COMMUNICATIONS

- 1156 Use of Home Computers: 1997

2001
number

Sec. 25. BANKING, FINANCE, AND INSURANCE

- 1170 Percent Distribution of Amount of Debt Held by Families: 1995 and 1998
- 1171 Ratios of Debt Payments to Family Income: 1992 to 1998
- 1181 Insured Commercial Banks by State and Other Area: 2000

Sec. 30. COMPARATIVE INTERNATIONAL STATISTICS

- 1331 Percent of Births to Unmarried Women for Selected Countries: 1980 and 1998
- 1360 Per Capita Consumption of Meat and Poultry: 2000
- 1376 Information and Communication Technology (ICT) Sector - Value Added by Country:
1997
- 1377 Information and Communication Technology (ICT) Sector—Research and Development
(R&D) Expenditures by Country: 1997
- 1390 Foreign Direct Investment Flows in OECD Countries: 1997 to 1999
- 1391 Military Expenditures and Armed Forces Personnel by Country: 1990 and 1997

Appendix VI

New Tables

Table number		Page number
Sec. 1. POPULATION		
14	Resident Population by Race, Hispanic Origin, and Single Years of Age: 2001	16 & 17
20	Resident Population—Components of Change for States: 2000-2001	24
42	Foreign-Stock Population by Nativity and Parentage: 1960 to 2000	45
49	Unmarried-Partner Households by Sex of Partners: 2000	48
61	Population in Group Quarters by Sex, Age, and Group Quarters Type: 2000	54
Sec. 2. VITAL STATISTICS		
95	Death Rates by Age: 1940 to 2000	75
96	Age-Adjusted Death Rates by Race and Sex: 1940 to 2000	76
101	Deaths, Death Rates by Selected Causes: 1999 and 2000	86
106	Death Rates From Cerebrovascular Diseases by Race, Sex and Age: 1950 to 1999	84
107	Death Rates From Malignant Neoplasms, by Race, Sex, and Age: 1950 to 1999	85
108	Death Rates From Suicide, by Sex and Race: 1950 to 1999	86
109	Death Rates From Human Immunodeficiency Virus (HIV) Disease by Race, Sex and Age: 1990 to 1999	86
Sec. 3. HEALTH AND NUTRITION		
134	State Children's Health Insurance Program-Enrollment by State: 1999 to 2001	101
140	Medical Care Benefits of Workers by Amount and Type of Employee Contribution: 1999	103
179	Persons With Limitation of Activity Caused by Chronic Conditions: 1997 and 1999	112
180	Persons 65 Years Old and Over With Limitation of Activity Caused by Chronic Conditions: 1997 to 1999	112
194	Sources of Calcium, Iron, and Cholesterol in the U.S. Food Supply: 1970 and 1999	128
Sec. 4. EDUCATION		
223	Students Who Are Homeschooled, Selected Characteristics: 1999	147
240	Children's Access to Home Computer and Use of the Internet at Home: 2000	157
265	Undergraduates in Postsecondary Institutions Owning Credit Cards and Balance Due: 1999-2000	173
267	Undergraduates in Postsecondary Institutions Taking Distance Education Courses: 1999-2000	171
Sec. 5. LAW ENFORCEMENT, COURTS, AND PRISONS		
307	Firearm Use by Offenders: 1997	194
317	Per Capita Justice Expenditure and Employment of State and Local Governments by State: 1999	199
Sec. 9. FEDERAL GOVERNMENT FINANCES AND EMPLOYMENT		
481	Federal Agencies Employing 500 or More Full-Time Officers With Authority to Carry Firearms and Make Arrests-Number of Officers: 1993 to 2000	323
483	Federally Owned Property in the United States by State: 2000	324

	Sec. 11. SOCIAL INSURANCE AND HUMAN SERVICES	337
	Social Assistance—Nonemployer Establishments and Receipts: 1997 to 1999. . . .	359
	Sec. 12. LABOR FORCE, EMPLOYMENT AND EARNINGS	363
	Persons Doing Job-Related Work at Home: 2001	376
	Persons on Flexible Schedules: 2001	377
	Persons on Shift Schedules: 2001	377
	Computer Use at Work by Occupation: 2001	399
	Percent of Workers With Access to Selected Employee Benefits In Private Industry: 1999.....	407
	Sec. 13. INCOME, EXPENDITURES, AND WEALTH	413
	Work Experience During 2000 by Poverty Status, Sex, and Age: 2000	443
	Sec. 15. BUSINESS ENTERPRISE	469
	Nonemployer Establishments and Receipts by Industry: 1997 to 1999.	479
	Sec. 17. AGRICULTURE	515
	Hired Farmworkers—Selected Characteristics: 1990 to 2000	526
	Sec. 23. TRANSPORTATION	653
5	Airports, Aircraft, and Airmen: 1980 to 1999.....	665
	Sec. 24. INFORMATION AND COMMUNICATIONS	693
4	Computers and Internet Use by Individuals: 1997 and 2001	713
	Sec. 25. BANKING, FINANCE, AND INSURANCE	715
1	Percent of U.S. Households That Use Selected Payment Instruments: 1995 and 1998.....	727
6	U.S. Holdings of Foreign Stocks and Bonds by Country: 1999 to 2001	733
8	Foreign Holdings of U.S. Securities by Country: 1999 to 2001.....	734
3	Average Premiums For Renters and Homeowners Insurance by State: 1999.	743
5	Real Estate, Rental, and Leasing—Nonemployer Establishments and Receipts by Kind of Business: 1997 to 1999.....	744
	Sec. 26. ARTS, ENTERTAINMENT, AND RECREATION	745
1	Arts, Entertainment, and Recreation—Nonemployer Establishments, and Receipts by Kind of Business (NAICS Basis)	748
7	Public School Supplemental Arts Education Programs, by School Characteristic: 1998-1999.....	751
1	Household Pet Ownership: 2001	753
	Sec. 30. COMPARATIVE INTERNATIONAL STATISTICS	813
1	Age of Withdrawal From Labor Force and Retirement Duration: 1999.....	839
1	Meat Consumption by Type and Country: 2000 to 2001.....	843
8	Key Global Telecom Indicators For the World Telecommunication Service Sector: 1995 to 2002.....	851
0	Military Budget by Country: 2001	860
1	Military Manpower Fit For Military Service, by Country: 2001	860

	Sec. 31. CENSUS 2000 DATA SAMPLER	861
1372	Urban and Rural Population by State: 2000	861
1373	Profile of Selected Social Characteristics-United States Summary: 2000	862
1374	Profile of Selected Economic Characteristics-United States Summary: 2000	863
1375	Profile of Selected Housing Characteristics-United States Summary: 2000	864
1376	Educational Attainment by State: 2000	865
1377	Disability Status of Population by State: 2000	866
1378	Disability Status of Population-25 Largest Metropolitan Areas: 2000	867
1379	Disability Status of Population-25 Largest Cities: 2000	867
1380	Mobility Status of Resident Population by State: 2000	868
1381	Nativity and Place of Birth of Resident Population by State: 2000	869
1382	Nativity and Place of Birth of Resident Population-25 Largest Metropolitan Areas: 2000	870
1383	Nativity and Place of Birth of Resident Population-25 Largest Cities: 2000	870
1384	Language Spoken at Home by Resident Population by State: 2000	871
1385	Language Spoken at Home by Resident Population-25 Largest Metropolitan Areas: 2000	872
1386	Language Spoken at Home by Resident Population-25 Largest Cities: 2000	872
1387	Ancestry of Resident Population by State: 2000	873
1388	Commuting to Work by State: 2000	874
1389	Commuting to Work—25 Largest Metropolitan Areas: 2000	875
1390	Commuting to Work—25 Largest Cities: 2000	875
1391	Occupation of Employed Civilians by State: 2000	876
1392	Household Income-Distribution by Income Level and State: 1999	877
1393	Families and Persons Below Poverty Level by State: 1999	878
1394	Household Income-Distribution by Income Level—25 Largest Metropolitan Areas: 1999	879
1395	Families and Persons Below Poverty Level—25 Largest Metropolitan Areas: 1999	879
1396	Selected Housing Characteristics by State: 2000	880
1397	Specified Owner-Occupied Housing Units, Value, and Costs by State: 2000	881
1398	Specified Owner-Occupied Housing Units, Value, and Costs—25 Largest Metro- politan Areas: 2000	882
1399	Specified Owner-Occupied Housing Units, Value, and Costs—25 Largest Cities: 2000	882
1400	Specified Renter-Occupied Housing Units, Gross Rent by State: 2000	883
1401	Specified Renter-Occupied Housing Units, Gross Rent—25 Largest Metropolitan Areas: 2000	884
1402	Specified Renter-Occupied Housing Units, Gross Rent—25 Largest Cities: 2000 ..	884

Index

Table

A

Abortions	83, 88, 89, 90
Abrasives, stone	854
Accidents and fatalities	171, 1034, 1069, 1070, 1077, 1089
Age of driver	1079
Aircraft	1034, 1039, 1041
Alcohol involvement	1075, 1076, 1078
Costs	173
Deaths and death rates	100, 102, 103, 104, 1069, 1070, 1089
Infants	66, 98, 99
Fires	334
Industrial	621, 622, 623, 624
Injuries	171, 172
Motor vehicles	100, 103, 1034, 1069, 1070, 1071, 1072, 1073, 1074, 1077, 1355
Motorcycle	1069
Police officers assaulted, killed	312
Railroad	1089
Transportation	1034
Work fatalities	626
Work time lost	622
Accommodation and food services industry:	
Capital	736
Earnings	710, 714, 715, 1244, 1245, 1249
Electronic commerce	1247
Employees	710, 1244, 1245, 1249
Establishments	710, 711, 715, 1244, 1245, 1246, 1249
Finances	701, 704
Nonemployers	711, 1246
Sales	701, 704, 708, 709, 710, 711, 1246, 1249
Accountants and auditors	588
Accounting, tax preparation, bookkeeping, and payroll services:	
Earnings	1244, 1251
Employees	1244, 1251
Establishments	1244, 1251
Finances	701
Receipts	701, 1251
Acquired immuno-deficiency syndrome (AIDS)	163, 174, 176, 177, 178
Acquisition of territory by the U.S.	336
Activities of daily living (ADLs)	169, 180

Statistical Abstract and Supplements

Printed Products

Statistical Abstract of the United States: 2002. Since 1878, the authoritative summary of statistics on the social, political, and economic organization of the United States. Includes a representative selection of statistics widely used by public officials, business analysts, educators, librarians, research workers, and students.

County and City Data Book: 2000. The latest in a series of publications that contains data for all counties and cities with a population of 25,000 or more. It also includes 2000 census population data for places of 2,500 or more inhabitants. Also included is a complete set of state maps showing all counties, places of 25,000 or more, and metropolitan areas. GPO price: \$68; GPO stock number: 003-024-08862-2. NTIS price: \$65 plus handling fee; NTIS stock number PB2002-101674.

State and Metropolitan Area Data Book: 1997-98. This volume, the fifth in a series, presents a vast array of emographic and economic data for the

United States, the 50 states and the District of Columbia; metropolitan areas (MAs); also includes selected data for component counties of MAs and population data for central cities of MAs. GPO price: \$24; GPO stock number: 003-024-08827-4. NTIS price: \$22.50 plus handling fee; NTIS stock number: PB98-124407.

GPO orders may be mailed to: Superintendent of Documents, Government Printing Office (GPO), P.O. Box 371954, Pittsburgh, PA 15250-7954. Payment must accompany order. Telephone: 202-512-1800 or 1-866-512-1800. Fax: 202-512-2250. Publications also available in GPO bookstores located in major cities.

NTIS orders may be mailed to: National Technical Information Service (NTIS), U.S. Department of Commerce, 5285 Port Royal Road, Springfield, VA 22161. Payment must accompany order. Telephone: 703-605-6000 or 1-800-553-6847. Fax: 703-605-6900.

Electronic Products

Statistical Abstract: 2001 on CD-ROM. Contains more than 1,400 tables found in the printed version, contains Adobe Acrobat software with hyperlinks to Lotus and Excel worksheets and to the Internet. Price: \$50. Available winter 2002.

County and City Data Book: 2000 on CD-ROM. Provides data from major tables in this book for the United States, states, counties and equivalent areas, cities of 25,000 or more inhabitants, and places of 2,500 or more inhabitants. Price: \$50.
